SET 1 · Money, Banking, and Financial Institutions

Banks, credit unions, and what they do

MAIN skill: Explain what banks and credit unions do with deposits and loans

Outcome FL.BANK.01 · National topic: Saving · NJSLS 9.1.12: FI

Learning target: Financial institutions: role of banks and credit unions; insured deposit accounts

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Deposits, withdrawals, and loans (5 questions)
  - Why: The MAIN questions describe what institutions do with deposits and loans; students who mix up these three words cannot follow them.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Online banks, apps, and partner banks (5 questions)
- Go Deeper 2: Comparing financial institutions (5 questions)

Practical skills beyond the standards: Fintech apps and partner banks

Content status: time-sensitive

- Source: FDIC — Deposit insurance covers up to $250,000 per depositor, per insured bank, for each account ownership category. https://www.fdic.gov/resources/deposit-insurance
- Source: NCUA — Credit union share insurance covers up to $250,000 per member, per insured credit union, for each ownership category. https://ncua.gov/consumers/share-insurance-coverage

MAIN — Explain what banks and credit unions do with deposits and loans

Question 1 of 5 · Learn and Apply

LEARN

A bank is a business that accepts deposits (money people put in accounts) and makes loans (money it lends and expects to be paid back with interest). Banks keep only part of their deposits as cash and lend much of the rest. The interest borrowers pay helps the bank pay its costs, earn a profit, and pay interest to savers.

Maya deposits $500 of her summer earnings at a bank. What does the bank usually do with much of the money while it sits in her account?

A. Lends part of it to other customers, such as car buyers or businesses

B. Keeps her exact bills in a locked box with her name on it

C. Sends it to the government until she withdraws it

D. Invests all of it in the stock market on Maya's behalf, and she keeps any gains

MAIN — Explain what banks and credit unions do with deposits and loans

Question 2 of 5 · Learn and Apply

LEARN

A credit union offers many of the same services as a bank: checking and savings accounts, debit cards, and loans. The difference is ownership. A credit union is a not-for-profit cooperative owned by its members, who are its account holders. To join, you must meet its membership rules, such as living in an area, working for an employer, or belonging to a group.

Which statement best describes a credit union?

A. A not-for-profit financial cooperative owned by its members

B. A government office that issues credit cards

C. A company that only sells stocks and bonds

D. A bank owned by outside investors who buy its stock and are not its customers

MAIN — Explain what banks and credit unions do with deposits and loans

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Every credit union has a "field of membership": the group of people it is allowed to serve. It might be employees of certain companies, people who live or work in a county, or members of an organization. Family members of current members can often join too. Some credit unions let almost anyone join by first joining a partner organization.

Jordan wants to join Riverside Teachers Credit Union, but Jordan is not a teacher and has no family member who works in a school. What is the most likely obstacle?

A. Credit unions do not offer checking accounts

B. Jordan must buy stock in the credit union on a stock exchange

C. Credit unions only accept customers who already have a credit card

D. Jordan may not meet the credit union's membership rules

MAIN — Explain what banks and credit unions do with deposits and loans

Question 4 of 5 · Learn and Apply

LEARN

Banks come in different types. National and regional banks are large and have many branches. Community banks are smaller and local. Online banks have no branches; customers use an app, a website, ATMs, and mobile deposit. Deposits at federally insured banks are protected by the FDIC, and deposits at federally insured credit unions by the NCUA, up to legal limits.

A city has a large national bank, a local community bank, a credit union, and an online-only bank. Which feature is TRUE of all four kinds of institutions?

A. They can offer federally insured deposit accounts

B. They are all owned by the customers who keep accounts there

C. They all have branches where you can deposit cash in person

D. They all guarantee a profit on money you invest with them

MAIN — Explain what banks and credit unions do with deposits and loans

Question 5 of 5 · Knowledge Check

Priya keeps $1,200 in cash in a shoebox. Which risk would a federally insured bank account reduce?

A. The money buying less in the future because prices rise

B. Having to pay sales tax when she spends the money

C. Spending the money on things she does not need

D. Losing the money to a fire or theft at home

BACKWARD B1 · concept review — Deposits, withdrawals, and loans

Question 1 of 5 · Learn and Apply

LEARN

A deposit is money you put into an account. A withdrawal is money you take out. A loan is money a lender gives you that you must pay back, usually with interest.

Aiden puts $40 into his savings account. What is this called?

A. A withdrawal

B. A loan

C. A fee

D. A deposit

BACKWARD B1 · concept review — Deposits, withdrawals, and loans

Question 2 of 5 · Learn and Apply

LEARN

When you take money out of your own account, by cash at an ATM, a debit card purchase, or a check, it is a withdrawal. The money was already yours.

Sofia takes $60 in cash out of her checking account at an ATM. What is this called?

A. A withdrawal

B. A deposit

C. A loan from the ATM company

D. Interest

BACKWARD B1 · concept review — Deposits, withdrawals, and loans

Question 3 of 5 · Learn and Apply

LEARN

A loan is borrowed money. The borrower promises to repay the amount borrowed, called the principal, plus interest, which is the price of borrowing.

A bank gives Luis $8,000 to buy a used car, and Luis agrees to pay it back over four years with interest. What did Luis receive?

A. A loan

B. A deposit

C. A gift from the bank

D. A withdrawal from his savings

BACKWARD B1 · concept review — Deposits, withdrawals, and loans

Question 4 of 5 · Learn and Apply

LEARN

Interest works in two directions. A borrower pays interest to a lender for using the lender's money. A saver earns interest from a bank, because the bank uses the saver's deposits to make loans.

Which choice describes interest from a SAVER'S point of view?

A. Money you pay the bank each month to keep your savings account open

B. The amount you first deposited

C. A tax on savings accounts

D. Money the bank pays you for keeping your money in an account

BACKWARD B1 · concept review — Deposits, withdrawals, and loans

Question 5 of 5 · Knowledge Check

Why can a bank afford to pay interest to savers?

A. It charges borrowers a higher interest rate than it pays savers

B. The federal government pays the interest on every insured savings account

C. It charges savers a fee equal to the interest

D. It prints new money to pay interest

GO DEEPER 1 — Online banks, apps, and partner banks

Question 1 of 5 · Learn and Apply

LEARN

Many apps that hold money are not banks. They are financial technology ("fintech") companies that partner with a bank. Money may be FDIC insured only if it is actually deposited at the partner bank in the customer's name and the records are kept properly. If the fintech company itself fails, getting access to money can take time.

A payment app advertises "bank-level" accounts. Its fine print says, "We are a financial technology company, not a bank. Banking services are provided by Harbor Bank, Member FDIC." What does this mean?

A. The app company is itself an FDIC-insured bank, so it is fully protected

B. No money in the app can ever be insured

C. Harbor Bank guarantees the app company's profits

D. Harbor Bank holds the deposits; the app company itself is not a bank

GO DEEPER 1 — Online banks, apps, and partner banks

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Deposit insurance covers money in deposit accounts at insured banks. A balance kept in a payment app may not be a bank deposit at all, depending on how the app holds it. The app's terms explain where the money is held.

Which question is MOST useful to ask before keeping a large balance in a payment app?

A. Is my balance held at an FDIC-insured bank in my name?

B. How many millions of people already use and trust the app?

C. Does the app have a nice design?

D. Can I send money to friends instantly?

GO DEEPER 1 — Online banks, apps, and partner banks

Question 3 of 5 · Learn and Apply

LEARN

Online banks often pay higher savings rates and charge fewer fees because they have no branches to run. The trade-off is access: depositing cash can be hard or impossible, and help is by phone or chat. The best choice depends on how you use your money.

An online bank pays 4.0% on savings and charges no monthly fee, but it has no branches. A local bank pays 0.5% and has a branch near Ana's job. Ana is paid in cash tips each night. Which drawback of the online bank matters MOST for Ana?

A. The online bank's savings rate is too high

B. Online banks are not allowed to give customers debit cards

C. Online banks are never insured

D. Depositing cash may be difficult without a branch

GO DEEPER 1 — Online banks, apps, and partner banks

Question 4 of 5 · Knowledge Check

A bank's website shows the FDIC logo. What does this tell a customer?

A. The bank's stock price is guaranteed

B. Every product the bank sells is insured, including investments

C. The bank charges no fees

D. Its deposits are insured up to the legal limit

GO DEEPER 1 — Online banks, apps, and partner banks

Question 5 of 5 · Knowledge Check

Which situation shows the main risk of keeping money with a non-bank app?

A. The app company fails and customers wait months to reach their money
B. The partner bank pays interest into each customer's account every month
C. The app sends a monthly statement
D. The customer uses the app's debit card at a store

GO DEEPER 2 — Comparing financial institutions

Question 1 of 5 · Learn and Apply

LEARN

Fees add up. A monthly fee costs 12 times that amount in a year. Many banks waive a monthly fee if you meet a condition, such as a minimum balance or a direct deposit. If you will not meet the condition, plan to pay the fee.

Two banks are similar except: Bank A charges a $12 monthly fee unless the balance stays above $1,500; Bank B charges no monthly fee. Kai usually keeps about $400 in checking. How much more would Bank A cost Kai per year?

A. $0

B. $12

C. $48

D. $144

GO DEEPER 2 — Comparing financial institutions

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

When comparing institutions, start with how you will use the account: fees, ATM access, branch or app access, minimum balances, and the savings rate. A feature that matters to one person may not matter to another.

Which comparison is MOST important for a student who will make frequent ATM withdrawals?

A. Whether the bank sponsors a local sports team or event

B. The color of the debit card

C. The bank's auto loan rate

D. How many fee-free ATMs are near home and school

GO DEEPER 2 — Comparing financial institutions

Question 3 of 5 · Learn and Apply

LEARN

To compare savings rates, find the interest each account pays. For one year, interest ≈ balance × rate (with the rate written as a decimal). Then subtract.

A credit union and a bank both offer free checking. The credit union pays 2.5% on savings; the bank pays 0.1%. On a $2,000 savings balance for one year (simple interest), how much more would the credit union pay?

A. $2

B. $4.80

C. $48

D. $50

GO DEEPER 2 — Comparing financial institutions

Question 4 of 5 · Knowledge Check · Practical how-to

Which document lists every fee an account can charge, such as overdraft, wire, and paper statement fees?

A. The account's fee schedule

B. The bank's home page advertisement

C. A monthly statement from last year

D. The debit card itself

GO DEEPER 2 — Comparing financial institutions

Question 5 of 5 · Knowledge Check

Leo picks a bank only because it gave him a $200 bonus for opening an account. Six months later he notices $15 monthly fees. What step did he skip?

A. Reading the fee conditions before choosing

B. Asking the bank for a larger bonus before opening

C. Opening the account online

D. Getting a credit card from the same bank first

SET 2 · Money, Banking, and Financial Institutions

Checking accounts and debit cards

MAIN skill: Use a checking account and debit card and track the available balance

Outcome FL.BANK.02 · National topic: Spending · NJSLS 9.1.12: FI, PB

Learning target: Payment methods: compare debit cards, credit cards, and other payment methods

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Debit versus credit (5 questions)
  Why: The MAIN skill assumes students know that a debit card spends their own money and a credit card borrows; this is the most common confusion.
- B2 · Math link → G6-S17-M (Grade 6 6.NS.B.3): Subtract multi-digit decimals
  Why: Every balance question subtracts amounts in dollars and cents.
- B3 · Math link → G6-S16-M (Grade 6 6.NS.B.3): Add multi-digit decimals
  Why: Deposits are added to the balance in dollars and cents.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: ATM networks and fees (5 questions)
- Go Deeper 2: Pending transactions, available balance, and posting (5 questions)

Practical skills beyond the standards: Holds, pending transactions, available balance

Content status: time-sensitive

Source: CFPB (Regulation E) — Liability limits for unauthorized electronic transfers: $50 if reported within 2 business days of learning of a lost card, up to $500 after that, and possibly more after 60 days from the statement. https://www.consumerfinance.gov/rules-policy/regulations/1005/6/

MAIN — Use a checking account and debit card and track the available balance

Question 1 of 5 · Learn and Apply

LEARN

A checking account is a bank or credit union account for everyday money: receiving pay, paying bills, buying things with a debit card, and writing checks. Checking accounts usually pay little or no interest. Money you are setting aside for later usually goes in a savings account.

Tia's paycheck is deposited into her checking account. Which use is a checking account designed for?

A. Earning high interest on long-term savings

B. Buying shares of stock

C. Borrowing money for a car

D. Paying rent, bills, and everyday purchases

MAIN — Use a checking account and debit card and track the available balance

Question 2 of 5 · Learn and Apply

LEARN

A debit card is linked to your checking account. When you pay with it, the money comes out of your account, usually within a day or two. A credit card is different: the card company lends you the money, and you pay it back later.

Noah buys groceries for $46.30 with his debit card. Where does the money come from?

A. Directly from Noah's checking account

B. From a loan that Noah repays next month

C. From the store's bank account

D. From Noah's savings account automatically, every time

MAIN — Use a checking account and debit card and track the available balance

Question 3 of 5 · Learn and Apply

LEARN

Your balance is the money in your account. Each withdrawal, debit card purchase, or bill payment is subtracted; each deposit is added. Keeping a running balance helps you avoid spending money you do not have.

Ella's checking balance is $312.40. She pays a $95.25 phone bill and makes a $40.00 ATM withdrawal. What is her new balance?

A. $177.15

B. $217.15

C. $272.40

D. $447.65

MAIN — Use a checking account and debit card and track the available balance

Question 4 of 5 · Learn and Apply

LEARN

Some merchants, such as gas stations, hotels, and car rentals, place a temporary "hold" on a debit card before they know the final amount. The hold lowers your AVAILABLE balance (what you can spend now) until the final charge posts and the extra is released, often within a few days.

At a gas pump, Sam's debit card is approved, and the bank places a $100 hold, even though Sam pumps only $38 of gas. What is the effect until the hold is released?

A. Sam is charged $100 permanently

B. Sam's account balance goes up by $62

C. Nothing changes, because holds only apply to credit cards

D. Sam's available balance is $100 lower for a short time

MAIN — Use a checking account and debit card and track the available balance

Question 5 of 5 · Learn and Apply

LEARN

Federal law limits what you owe when a card is used without permission. For credit cards, the most you can owe for unauthorized charges is $50. For debit cards, the limit depends on how quickly you report the loss: $50, $500, or more if you wait over 60 days after your statement. Debit card fraud also removes your own money until the bank investigates.

A thief steals Ava's wallet and uses both her debit card and her credit card. Which card generally gives her stronger legal protection against the thief's charges?

A. The debit card, because it spends her own money

B. The debit card, because banks must refund theft the same day

C. Both cards always have identical protection

D. The credit card

BACKWARD B1 · concept review — Debit versus credit

Question 1 of 5 · Learn and Apply

LEARN

"Debit" means taking money out of your account. A debit card takes money from your checking account. "Credit" means borrowing: a credit card company pays the store, and you owe the card company.

Which card spends money that is ALREADY in your bank account?

A. A debit card

B. A credit card

C. A store gift card from a friend

D. A library card

BACKWARD B1 · concept review — Debit versus credit

Question 2 of 5 · Learn and Apply

LEARN

With a credit card, the card company pays the merchant for you. The amount is added to your card balance, which is a debt you must pay back. If you do not pay the full balance by the due date, you may owe interest.

Owen pays for a $25 meal with a credit card. Who pays the restaurant first?

A. The credit card company, and Owen owes it $25

B. Owen's checking account, immediately

C. The restaurant pays itself

D. Nobody pays the restaurant until Owen gets his monthly bill

BACKWARD B1 · concept review — Debit versus credit

Question 3 of 5 · Learn and Apply

LEARN

A debit card can only spend the money in your account. If a purchase is larger than your balance, the bank may decline it. If you opted in to overdraft coverage, the bank may pay it and charge an overdraft fee.

What happens if you try to spend more with a debit card than your account holds?

A. The extra amount becomes a free gift

B. The store lowers the price to your balance

C. Your credit card is charged automatically, every time

D. It is declined, or covered for an overdraft fee

BACKWARD B1 · concept review — Debit versus credit

Question 4 of 5 · Knowledge Check

Which statement is TRUE?

A. Using a credit card creates a debt; using a debit card does not

B. Using a debit card creates a debt; using a credit card does not

C. Both cards always create a debt

D. Neither card is ever connected to money you owe

BACKWARD B1 · concept review — Debit versus credit

Question 5 of 5 · Learn and Apply

LEARN

If you do not opt in to overdraft coverage, a bank generally cannot charge you an overdraft fee for an ATM withdrawal or a one-time debit card purchase; instead the purchase is declined. A credit card lets you borrow up to a credit limit, which is not your money.

Mia wants a card that will stop her from spending more than she has. Which card fits that goal better?

A. A credit card with a high limit

B. A credit card that she uses only for large purchases

C. Any card, because cards cannot be overspent

D. A debit card with overdraft coverage turned off

GO DEEPER 1 — ATM networks and fees

Question 1 of 5 · Learn and Apply

LEARN

An ATM network is a group of machines your bank lets you use without a fee. At an "out-of-network" ATM you can be charged twice: once by your own bank and once by the ATM's owner (a "surcharge").

Rosa uses an out-of-network ATM. Her bank charges $2.50 and the ATM owner charges $3.00. She withdraws $40. How much leaves her account in total?

A. $40.00

B. $42.50

C. $43.00

D. $45.50

GO DEEPER 1 — ATM networks and fees

Question 2 of 5 · Learn and Apply

LEARN

Small fees repeated often add up. Multiply the fee per use by the number of uses in a year.

Each out-of-network withdrawal costs Rosa $5.50 in fees: $2.50 from her bank and $3.00 from the ATM owner. She makes two such withdrawals a week. About how much does she pay in ATM fees in a year (52 weeks)?

A. $5.50

B. $286

C. $572

D. $4,732

GO DEEPER 1 — ATM networks and fees

Question 3 of 5 · Knowledge Check · Practical how-to

Rosa pays $5.50 in fees each time she withdraws cash at an out-of-network ATM. Which choice would cut her ATM fees the MOST?

A. Use in-network ATMs or get cash back at stores

B. Withdraw $20 each time instead of $40

C. Use a different out-of-network ATM each time she needs cash

D. Check her balance at the ATM before each withdrawal

GO DEEPER 1 — ATM networks and fees

Question 4 of 5 · Learn and Apply

LEARN

Some accounts refund ATM fees up to a monthly limit. The refund lowers what you pay, but only up to that limit.

A bank refunds up to $10 of other banks' ATM fees each month. Rosa pays $22 in out-of-network fees this month. How much does she pay after the refund?

A. $10

B. $12

C. $22

D. $32

GO DEEPER 1 — ATM networks and fees

Question 5 of 5 · Knowledge Check

Which statement about an ATM "balance inquiry" at an out-of-network machine is MOST accurate?

A. It is always free, because no money leaves the account

B. It moves money to savings

C. It counts as a deposit

D. It can carry a fee even though no money is withdrawn

GO DEEPER 2 — Pending transactions, available balance, and posting

Question 1 of 5 · Learn and Apply

LEARN

A transaction is "pending" when the bank knows about it but has not finished processing it ("posting" it). Your available balance is the money you can spend now: roughly your posted balance minus pending charges and holds. Spending based on the larger number can cause overdrafts.

Kim's app shows: current balance $250; pending transactions −$80. What is her available balance?

A. $80

B. $170

C. $250

D. $330

GO DEEPER 2 — Pending transactions, available balance, and posting

Question 2 of 5 · Learn and Apply

LEARN

Bank apps show what the bank knows. A check you wrote that the payee has not cashed yet does not appear at all. Your own record of payments, called a register, catches those.

Which balance should Kim use to decide whether she can afford a $150 purchase today?

A. The highest balance she had this month

B. Her balance from last month's statement

C. Her current balance, without counting pending items

D. Her available balance minus uncleared checks

GO DEEPER 2 — Pending transactions, available balance, and posting

Question 3 of 5 · Learn and Apply

LEARN

When you deposit a check, the bank may "hold" part of the money until the check clears. Federal rules set the maximum hold times, and the bank must tell you when the money will be available.

Ben deposits a $600 check on Monday. The bank says $225 is available Tuesday and the rest Thursday. How much can Ben safely spend from this deposit on Tuesday?

A. $0

B. $225

C. $375

D. $600

GO DEEPER 2 — Pending transactions, available balance, and posting

Question 4 of 5 · Knowledge Check

If a deposited check "bounces" (is returned unpaid) after you spent the money, what usually happens?

A. The bank takes the amount back from your account, possibly with a fee

B. The bank keeps the money in your account because it was already available

C. The person who wrote the check pays your fee

D. Nothing, because the deposit was already posted

GO DEEPER 2 — Pending transactions, available balance, and posting

Question 5 of 5 · Knowledge Check · Practical how-to

Which habit best prevents spending based on the wrong balance?

A. Recording each purchase as you make it

B. Checking the balance once a month

C. Using only the current balance on the bank app

D. Keeping your PIN on the card

SET 3 · Money, Banking, and Financial Institutions

Opening a checking account

MAIN skill: Compare checking accounts and complete the steps to open one

Outcome FL.BANK.03 · National topic: Spending · NJSLS 9.1.12: FI, PB

Learning target: Financial institutions and payment methods: choosing and opening a deposit account

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Account fees and fee waivers (5 questions)
  Why: Choosing and opening an account depends on understanding what a monthly fee and a waiver condition are.
- B2 · Math link → G5-S22-M (Grade 5 5.NBT.B.7): Solve real-world problems with decimal operations
  Why: Comparing accounts means multiplying monthly fees by months and comparing dollar totals.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Reading account disclosures and fee schedules (5 questions)
- Go Deeper 2: Account screening and second-chance accounts (5 questions)

Practical skills beyond the standards: Step-by-step account opening; Direct deposit setup; ChexSystems and second-chance accounts

Content status: time-sensitive

Source: FinCEN / federal banking agencies (Customer Identification Program rule, 31 CFR 1020.220) — Banks must collect at least name, date of birth, address, and an identification number before opening an account.

MAIN — Compare checking accounts and complete the steps to open one

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

Banks and credit unions usually require an adult (18 or older) to open an account alone, because a minor generally cannot be held to a contract. Many offer teen or student checking accounts that a minor opens jointly with a parent or guardian. The adult co-owner can see the account and shares responsibility for it.

Jordan is 17 and wants a first checking account. Which plan matches how most banks handle an applicant under 18?

A. Open an individual account online using only a student ID card

B. Wait until age 21, the legal minimum age for any bank account

C. Deposit paychecks into a friend's account until Jordan turns 18

D. Open a joint teen account with a parent or guardian

MAIN — Compare checking accounts and complete the steps to open one

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Federal rules require banks to verify who opens an account. Before opening one, a bank collects at least your name, date of birth, address, and an identification number: a Social Security number for U.S. citizens, or another number, such as an ITIN or passport number, for others. Most banks also ask for a government-issued photo ID.

Which information will a bank most likely require to open a checking account?

A. Your report card, a teacher's reference, and your school's address

B. Your credit card number and its PIN, to link the two accounts

C. Only a signature, because banks do not verify who customers are

D. Name, birth date, address, and an ID number such as an SSN

MAIN — Compare checking accounts and complete the steps to open one

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Many checking accounts charge a monthly maintenance fee that is waived if you meet a condition: a minimum balance, a minimum direct deposit, or being a student. Compare accounts by the fees YOU would actually pay, based on how you will use the account.

Tess will receive about $800 a month by direct deposit and usually keeps about $300 in checking.
Account X: $10 monthly fee, waived with a direct deposit of $500 or more each month.
Account Y: $5 monthly fee, waived if the balance stays at $1,000 or more.
What would each account cost Tess in monthly fees over a year?

A. Account X: $0; Account Y: $60

B. Account X: $120; Account Y: $60

C. Account X: $0; Account Y: $0

D. Account X: $120; Account Y: $0

MAIN — Compare checking accounts and complete the steps to open one

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Direct deposit sends pay electronically into your account. Your employer needs two numbers: the routing number, a 9-digit number that identifies your bank, and your account number, which identifies your account at that bank. Both appear on checks and in the bank's app. Never share a PIN or password to set up a deposit.

Tess wants her paycheck deposited directly into her new account. What does her employer need from her?

A. Her debit card number and its PIN

B. Her online banking username and password

C. Only the name of her bank and the branch's street address

D. Her bank's routing number and her account number

MAIN — Compare checking accounts and complete the steps to open one

Question 5 of 5 · Knowledge Check

Ahmed's new account requires a $25 opening deposit and has a $6 monthly fee that is waived only when the balance stays at $300 or more. Ahmed's balance stays around $150. Assuming no other fees, how much will the account charge him in fees over 6 months?

A. $0

B. $6

C. $36

D. $61

BACKWARD B1 · concept review — Account fees and fee waivers

Question 1 of 5 · Learn and Apply

LEARN

A fee is a charge the bank takes from your account. A "monthly maintenance fee" (also called a service fee) is charged every month just for having the account, unless you meet a waiver condition.

A checking account has a "$12 monthly maintenance fee." What does this mean?

A. The bank takes $12 each month unless a waiver applies

B. The bank pays you $12 each month for keeping the account

C. You must deposit $12 every month to keep the account open

D. You pay $12 one time, when you first open the account

BACKWARD B1 · concept review — Account fees and fee waivers

Question 2 of 5 · Learn and Apply

LEARN

A waiver condition is a rule that, if you meet it, cancels a fee. A "minimum daily balance" rule means your balance must stay at or above the amount every day of the statement period.

An account waives its $8 monthly fee "with a minimum daily balance of $500." In March, Lena's balance stays above $600 every day. What fee does she pay for March?

A. $0

B. $4

C. $8

D. $500

BACKWARD B1 · concept review — Account fees and fee waivers

Question 3 of 5 · Learn and Apply

LEARN

With a minimum daily balance rule, one day below the minimum is enough to lose the waiver for that month, even if the balance is high on other days.

An account waives its $8 monthly fee "with a minimum daily balance of $500." In April, Lena's balance drops to $450 for one day, then goes back above $600. What fee does she pay for April?

A. $0

B. $4

C. $8

D. $50

BACKWARD B1 · concept review — Account fees and fee waivers

Question 4 of 5 · Knowledge Check

Which statement about a minimum opening deposit is TRUE?

A. It is your own money, deposited into your new account

B. It is a fee the bank keeps to open the account

C. It is a loan the bank gives you to start the account

D. It must be paid again every month you keep the account

BACKWARD B1 · concept review — Account fees and fee waivers

Question 5 of 5 · Knowledge Check

Two accounts are identical except for fees. Which would cost a student nothing?

A. One with a $3 fee, because the fee is small

B. One with a $15 fee waived at a $5,000 balance, for a student with $200

C. One with a fee charged only every other month, at $6

D. One whose fee is waived for students, if the student qualifies

GO DEEPER 1 — Reading account disclosures and fee schedules

Question 1 of 5 · Learn and Apply

LEARN

When you open an account, the bank gives you disclosures: documents that list the account's interest rate, fees, and rules. Federal law (the Truth in Savings Act) requires banks to disclose this information. Small optional fees, like paper statement fees, are easy to miss.

A disclosure says: "Paper statement fee: $2 per month. Free with e-statements." Rafael wants paper statements. Over two years, how much will this choice cost?

A. $2

B. $4

C. $24

D. $48

GO DEEPER 1 — Reading account disclosures and fee schedules

Question 2 of 5 · Learn and Apply

LEARN

A fee schedule is a list of every fee the account can charge: monthly fees, overdraft and returned item fees, wire transfer fees, stop payment fees, out-of-network ATM fees, and fees for extras like paper statements or cashier's checks.

Which item would you expect to find in an account's fee schedule?

A. The charge for an incoming or outgoing wire transfer

B. The bank's current interest rate on 30-year home mortgages

C. The FDIC insurance limit for your account

D. The interest rate on your credit card

GO DEEPER 1 — Reading account disclosures and fee schedules

Question 3 of 5 · Knowledge Check

An account advertises "No monthly fee!" Its fee schedule lists a $35 overdraft fee, a $3 out-of-network ATM fee, and a $30 wire fee. Which conclusion is correct?

A. The account has no fees of any kind

B. The account will cost exactly $68 every month, since all three fees apply

C. Every one of those fees is illegal for a free account

D. The account can still be costly, depending on how it is used

GO DEEPER 1 — Reading account disclosures and fee schedules

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Banks can change account terms. They must tell existing customers in advance about changes that could hurt them, such as a higher fee. That notice gives you time to compare and decide.

A bank sends a notice that a fee will change in 30 days. What is a reasonable response?

A. Compare the new terms with other accounts

B. Ignore it, because fees cannot change after an account is opened

C. Close the account the same day without checking alternatives

D. Pay the new fee now to lock in the old rate

GO DEEPER 1 — Reading account disclosures and fee schedules

Question 5 of 5 · Knowledge Check · Practical how-to

Which question is MOST useful when comparing two accounts' disclosures?

A. Which bank has the larger headquarters building?

B. Which disclosure document is longer?

C. Which bank's advertising do I see most often on social media?

D. Which fees will I realistically pay, given how I bank?

GO DEEPER 2 — Account screening and second-chance accounts

Question 1 of 5 · Learn and Apply

LEARN

Before opening an account, many banks check a consumer report from a checking account screening company, such as ChexSystems or Early Warning Services. These reports list problems with past accounts, such as unpaid overdrafts, accounts closed by a bank, or suspected fraud. Negative information can stay on these reports for years.

Devon's application for a checking account is denied because of a report from a checking account screening company. What kind of history does such a report usually show?

A. Unpaid overdrafts or fraud at past banks

B. Grades and attendance from high school

C. Devon's medical history and doctor visits

D. Every purchase Devon has made with cash

GO DEEPER 2 — Account screening and second-chance accounts

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Checking account screening companies are consumer reporting agencies. Under federal law you can get a free copy of your report every 12 months and dispute information you believe is wrong; the company must investigate.

Devon was denied a checking account because of a checking account screening report that he believes contains a mistake. What can he do?

A. Nothing, because screening reports cannot be corrected

B. Pay the screening company to delete it

C. Open new accounts under a friend's name instead of his own

D. Request a free copy of the report and dispute the error

GO DEEPER 2 — Account screening and second-chance accounts

Question 3 of 5 · Knowledge Check · Practical how-to

Devon's checking account screening report correctly shows a $90 negative balance he left at an old bank. Which step would most likely help him open an account in the future?

A. Pay off the $90 and ask the old bank to update the report

B. Wait one week, because reports clear automatically

C. Open many applications at once to find one bank that says yes

D. Avoid banks and keep all of his money in cash

GO DEEPER 2 — Account screening and second-chance accounts

Question 4 of 5 · Learn and Apply

LEARN

Some banks and credit unions offer second-chance accounts to people who were denied regular accounts. They may have a monthly fee, no overdraft feature, or lower limits. After a period of good use, some can be changed to a regular account.

What is a "second-chance" checking account?

A. A second account that the bank opens automatically for every customer

B. A loan that pays off your old bank's balance

C. A savings account that pays double interest

D. An account for people with past account problems, often with limits

GO DEEPER 2 — Account screening and second-chance accounts

Question 5 of 5 · Knowledge Check

Devon cannot open a regular account, but a credit union offers him a second-chance checking account (an account for people with past account problems, often with a small fee). Why might it be better than using check-cashing stores for every paycheck?

A. Check-cashing stores are always free

B. Second-chance accounts pay much higher interest than savings accounts

C. A bank account means Devon can never overdraw again

D. Check-cashing fees on every paycheck can cost far more over a year

SET 4 · Money, Banking, and Financial Institutions

Account registers and bank statements

MAIN skill: Track a running balance and read a bank statement

Outcome FL.BANK.04 · National topic: Spending · NJSLS 9.1.12: FI, PB

Learning target: Managing a checking account: record transactions and reconcile statements

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Money in and money out (5 questions)
  - Why: Running-balance and statement problems require knowing which transactions add and which subtract.
- B2 · Math link → G6-S16-M (Grade 6 6.NS.B.3): Add multi-digit decimals
  - Why: Deposits are added in dollars and cents.
- B3 · Math link → G6-S17-M (Grade 6 6.NS.B.3): Subtract multi-digit decimals
  - Why: Purchases and payments are subtracted in dollars and cents.
- B4 · Math link → G7-S15-M (Grade 7 7.NS.A.1.b): Interpret sums of rational numbers in real-world situations
  - Why: An overdrawn account has a negative balance; students must read and compute with negative amounts.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Reconciling a statement (5 questions)
- Go Deeper 2: Spotting errors and unauthorized charges (5 questions)

Practical skills beyond the standards: Reconciling a bank statement

Content status: time-sensitive

Source: CFPB (Regulation E) — Report unauthorized electronic transfers that appear on a statement within 60 days of the statement date to keep liability limits. https://www.consumerfinance.gov/rules-policy/regulations/1005/6/

MAIN — Track a running balance and read a bank statement

Question 1 of 5 · Learn and Apply

LEARN

An account register (or a budgeting app) records every transaction and keeps a running balance. Add each deposit (money in). Subtract each withdrawal, payment, or purchase (money out). Recording each item as it happens shows what you truly have.

Nina starts with $215.60 in checking. She deposits $84.25, buys shoes for $59.99, and pays a $42.00 bill. What is her balance?

A. $113.61

B. $155.86

C. $197.86

D. $316.84

MAIN — Track a running balance and read a bank statement

Question 2 of 5 · Learn and Apply

LEARN

A bank statement summarizes one period, usually a month: the balance at the start, every deposit and withdrawal, any fees or interest, and the balance at the end. Ending balance = beginning balance + deposits − withdrawals.

A bank statement shows: beginning balance $640.00; total deposits $1,120.00; total withdrawals $1,395.50. What is the ending balance?

A. $275.50

B. $364.50

C. $915.50

D. $1,914.50

MAIN — Track a running balance and read a bank statement

Question 3 of 5 · Learn and Apply

LEARN

The statement equation (beginning + deposits − withdrawals = ending) can be used to find any missing amount. Substitute what you know and solve for the unknown.

A statement shows a beginning balance of $410.00, withdrawals of $760.00, and an ending balance of $300.00. What were the total deposits?

A. $110.00

B. $350.00

C. $650.00

D. $1,470.00

MAIN — Track a running balance and read a bank statement

Question 4 of 5 · Learn and Apply

LEARN

If more money leaves an account than it holds, the balance becomes negative: the account is "overdrawn." A negative balance is money owed to the bank, often with a fee added. It must be repaid by depositing money.

Carlos's balance is $42.10. A $55.00 automatic payment goes through anyway. What does his account show afterward?

A. −$12.90

B. $0.00

C. $12.90

D. $97.10

MAIN — Track a running balance and read a bank statement

Question 5 of 5 · Learn and Apply

LEARN

A check you write is paid only when the person you paid deposits or cashes it, which can take days or weeks. Until then, the money is still in your account, but it is already promised.

Ivy wrote a $75 check to her landlord on May 30. Her May 31 bank statement does not show it. Why?

A. The landlord had not yet deposited the check when the statement closed

B. The bank forgot to charge the check, so Ivy gets to keep the $75

C. Checks never appear on bank statements

D. The check was paid from Ivy's savings account automatically

BACKWARD B1 · concept review — Money in and money out

Question 1 of 5 · Learn and Apply

LEARN

Money coming into an account (deposits, direct deposits, transfers in, interest) is a credit and increases the balance. Money going out (purchases, withdrawals, bill payments, fees) is a debit and decreases it.

Which transaction INCREASES a checking account balance?

A. A paycheck deposited by direct deposit

B. A debit card purchase at a store

C. An ATM cash withdrawal

D. An automatic payment for this month's phone bill

BACKWARD B1 · concept review — Money in and money out

Question 2 of 5 · Learn and Apply

LEARN

On a bank statement, "debit" means money taken out of the account, and "credit" means money added. Fees are debits; interest earned and refunds are credits.

On a bank statement, which item is a debit?

A. $0.42 of interest earned

B. A $200 transfer in from savings

C. A $50 refund from a store

D. A $3.00 ATM fee

BACKWARD B1 · concept review — Money in and money out

Question 3 of 5 · Learn and Apply

LEARN

Each purchase with a debit card lowers your balance by the purchase amount.

Zoe's balance is $120. She buys a $30 jacket. What happens to her balance?

A. It goes down to $90

B. It goes up to $150

C. It stays at $120 until the end of the month

D. It goes down to $30

BACKWARD B1 · concept review — Money in and money out

Question 4 of 5 · Knowledge Check

Why should you record a purchase in your register right away?

A. Because the bank charges a fee each month if you do not record it

B. Because unrecorded purchases are free

C. Because the store needs a copy of your register

D. So your balance shows what you really have left to spend

BACKWARD B1 · concept review — Money in and money out

Question 5 of 5 · Knowledge Check

Which list contains ONLY items that lower a balance?

A. A check you wrote, a bill payment, and a monthly fee

B. A deposit, a check you wrote, and a refund

C. Interest earned, a monthly fee, and a transfer in from savings

D. A paycheck, a gift deposited, and interest

GO DEEPER 1 — Reconciling a statement

Question 1 of 5 · Learn and Apply

LEARN

Reconciling means checking that your records match the bank's. Start with the statement's ending balance, add deposits the bank has not recorded yet ("deposits in transit"), and subtract checks and payments that have not cleared ("outstanding"). The result should equal your register balance.

Sam's statement ending balance is $520. He has a $150 deposit the bank had not received yet and two outstanding checks of $60 and $45. What is his adjusted (true) balance?

A. $415

B. $520

C. $565

D. $775

GO DEEPER 1 — Reconciling a statement

Question 2 of 5 · Learn and Apply

LEARN

When the adjusted statement balance and the register do not match, look for items on the statement that are missing from the register, such as fees, interest, or automatic payments, and for math mistakes in the register.

Sam reconciles his account. After he adds deposits in transit and subtracts outstanding checks, the statement shows $565, but his register shows $575. Which is the most likely explanation?

A. The bank always makes small $10 errors in its own favor

B. Sam's deposit in transit was $10 smaller than he thought

C. Interest earned is never shown on statements

D. A $10 charge on the statement was never recorded in his register

GO DEEPER 1 — Reconciling a statement

Question 3 of 5 · Knowledge Check

Sam finds a $4 monthly "service fee" on his statement that he did not record. What should he do in his register?

A. Subtract $4 from his register balance

B. Add $4 to his register balance

C. Ignore it, since the bank already recorded it

D. Subtract $8, once for the bank and once for him

GO DEEPER 1 — Reconciling a statement

Question 4 of 5 · Knowledge Check

Which reason BEST explains why reconciling monthly matters?

A. It raises the interest rate on the account

B. It is legally required for every account holder

C. It removes any fees the bank charged that month

D. It catches errors and unauthorized charges early

GO DEEPER 1 — Reconciling a statement

Question 5 of 5 · Knowledge Check

Amy's statement ending balance is $310. Outstanding checks: $25 and $40. No deposits in transit. Her register shows $245. Do her records agree?

A. Yes: $310 − $25 − $40 = $245

B. No: her register should show $310

C. No: her register should show $375

D. Yes, because the two numbers are close

GO DEEPER 2 — Spotting errors and unauthorized charges

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

An unauthorized transaction is one you did not make or allow. Federal rules (Regulation E) limit your liability for unauthorized electronic transfers, but the protection depends on how fast you report. Contact your bank as soon as you notice one.

Lucas sees a $129 charge from an online store he has never used. What should he do FIRST?

A. Wait until next month to see if it happens again

B. Email the online store his full account number to ask about the charge

C. Ignore it, because small banks cannot reverse charges

D. Contact his bank right away to report the unauthorized charge

GO DEEPER 2 — Spotting errors and unauthorized charges

Question 2 of 5 · Learn and Apply

LEARN

For unauthorized electronic transfers that appear on a statement, you generally have 60 days after the statement is sent to report them. After that, you may be liable for later transfers the bank could have stopped.

Mia's statement dated March 31 shows an unauthorized online debit charge; her card was never lost or stolen. She reports it on May 20. Is she within the window for full protection?

A. Yes; it is within 60 days of the statement

B. No; the limit is 2 business days

C. No; charges must be reported the same day they post

D. Yes, because there is no time limit at all

GO DEEPER 2 — Spotting errors and unauthorized charges

Question 3 of 5 · Knowledge Check

A store charged Ana twice for one $45 purchase. Which statement is accurate?

A. Duplicate charges are legal if the store says so

B. She must accept it because she used her card

C. She can only fix it by closing her account

D. This is an error she can dispute with the bank or the store

GO DEEPER 2 — Spotting errors and unauthorized charges

Question 4 of 5 · Knowledge Check · Practical how-to

Which habit catches unauthorized charges the fastest?

A. Transaction alerts and frequent app checks

B. Reading paper statements once a year

C. Checking only the ending balance on each statement

D. Using the card less often

GO DEEPER 2 — Spotting errors and unauthorized charges

Question 5 of 5 · Learn and Apply

LEARN

For a lost or stolen debit card, if you report within 2 business days of learning of the loss, your liability for unauthorized transfers is capped at $50. After 2 business days, the cap rises to $500. Many banks voluntarily offer $0 liability, but the law sets these limits.

Ben lost his debit card on Monday, noticed it Tuesday, and reported it Tuesday. A thief spent $300 before he reported it. What is the most Ben can be held responsible for under federal rules?

A. $300

B. $500

C. $0, in every case

D. $50

SET 5 · Money, Banking, and Financial Institutions

Overdrafts and bank fees

MAIN skill: Explain overdrafts and compute the cost of overdraft and related fees

Outcome FL.BANK.05 · National topic: Spending · NJSLS 9.1.12: FI, PB

Learning target: Payment methods and the costs of financial services: overdraft and account fees

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: What "overdrawn" means (5 questions)
  - Why: Students must understand a negative balance as money owed before they can reason about overdraft fees.
- B2 · Math link → G7-S15-M (Grade 7 7.NS.A.1.b): Interpret sums of rational numbers in real-world situations
  - Why: Overdraft problems require adding and subtracting with negative balances.
- B3 · Math link → G7-S25-M (Grade 7 7.NS.A.3): Solve real-world problems with the four operations on rational numbers
  - Why: Multi-step fee problems combine several operations with money amounts.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: The yearly cost of fee habits (5 questions)
- Go Deeper 2: Linked accounts and overdraft lines of credit (5 questions)

Practical skills beyond the standards: Overdraft opt-in decision; Low-balance alerts and buffers

Content status: time-sensitive

Source: CFPB — Banks must get the customer's opt-in before charging overdraft fees on ATM withdrawals and one-time debit card purchases; checks and recurring payments may be paid into overdraft without that opt-in. https://www.consumerfinance.gov/ask-cfpb/what-is-overdraft-coverage-en-1015/

MAIN — Explain overdrafts and compute the cost of overdraft and related fees

Question 1 of 5 · Learn and Apply

LEARN

An overdraft happens when a payment or purchase is larger than the money in the account and the bank pays it anyway. The account goes negative, and the bank may charge an overdraft fee. If the bank refuses the payment instead, the item is returned unpaid, and a returned-item ("NSF") fee may apply.

What is an overdraft?

A. Taking out a loan with a fixed monthly payment

B. Keeping a balance above the minimum required

C. Transferring money from checking to savings

D. Spending more than the account holds

MAIN — Explain overdrafts and compute the cost of overdraft and related fees

Question 2 of 5 · Learn and Apply

LEARN

Each item paid while the account is overdrawn can trigger its own fee. Track the balance item by item. A small purchase can cost far more than its price once a fee is added.

Mason's balance is $30. His bank charges $35 per overdraft. He makes three debit card purchases: $12, then $25, then $8, and he has opted in to overdraft coverage. If each purchase that makes the balance negative (or more negative) gets a fee, how much will he pay in fees?

A. $15

B. $35

C. $70

D. $105

MAIN — Explain overdrafts and compute the cost of overdraft and related fees

Question 3 of 5 · Learn and Apply

LEARN

Federal rules say a bank must get your permission (your "opt-in") before charging overdraft fees on ATM withdrawals and one-time debit card purchases. If you do not opt in, those transactions are usually declined. Checks and automatic bill payments are treated differently and can still be overdrawn.

Without opting in to overdraft coverage, what usually happens when Leah tries a one-time debit card purchase larger than her balance?

A. The purchase is declined, with no overdraft fee

B. The purchase is approved, and she pays a $35 fee

C. The store gives her the item for free

D. Her account is closed immediately

MAIN — Explain overdrafts and compute the cost of overdraft and related fees

Question 4 of 5 · Learn and Apply

LEARN

Overdraft protection links checking to another account, such as savings or a line of credit. When checking runs short, money is moved automatically to cover the item. Banks often charge a transfer fee, but it is usually smaller than an overdraft fee.

Hana links her savings account to checking for overdraft protection. The bank charges $10 per automatic transfer instead of a $35 overdraft fee. She overdraws twice this month. How much does linking save her this month?

A. $20

B. $25

C. $50

D. $70

MAIN — Explain overdrafts and compute the cost of overdraft and related fees

Question 5 of 5 · Knowledge Check

Ray's $80 electric bill payment is returned unpaid because his account is short. Which result is MOST likely?

A. He may owe a returned-item fee, and the bill is still unpaid

B. The bill is paid, and no one charges any fee

C. The electric company cancels the bill

D. His bank pays the bill from its own funds and never charges him for it

BACKWARD B1 · concept review — What "overdrawn" means

Question 1 of 5 · Learn and Apply

LEARN

When spending is larger than the balance and the bank pays anyway, the balance becomes negative. A negative balance means you owe the bank that amount.

Rina's balance is $20. She spends $26. If the bank pays it, what is her balance (before any fee)?

A. −$6

B. $0

C. $6

D. $46

BACKWARD B1 · concept review — What "overdrawn" means

Question 2 of 5 · Learn and Apply

LEARN

A negative account balance is a debt to the bank. You must deposit enough to bring the balance back to zero or above.

What does a balance of −$6 mean?

A. The bank owes Rina $6

B. Rina has $6 left to spend

C. The account has been closed

D. Rina owes the bank $6

BACKWARD B1 · concept review — What "overdrawn" means

Question 3 of 5 · Learn and Apply

LEARN

A fee is subtracted from the balance, even when the balance is already negative, which makes it more negative.

Rina's balance is −$6, and the bank adds a $35 overdraft fee. What is her new balance?

A. −$41

B. −$35

C. −$29

D. $29

BACKWARD B1 · concept review — What "overdrawn" means

Question 4 of 5 · Knowledge Check

How much must Rina deposit to bring a −$41 balance back to exactly $0?

A. $0

B. $6

C. $35

D. $41

BACKWARD B1 · concept review — What "overdrawn" means

Question 5 of 5 · Knowledge Check

Rina had $20 in checking and made a $26 debit purchase, overdrawing her account. Which choice would have prevented this?

A. Making the purchase on a different day of the week instead

B. Using the card at a larger store

C. Checking her balance the day after the purchase

D. Checking her available balance before the $26 purchase

GO DEEPER 1 — The yearly cost of fee habits

Question 1 of 5 · Learn and Apply

LEARN

A habit that causes a fee every month becomes a large yearly cost. Multiply the monthly cost by 12 to see the yearly impact.

Jae overdraws about once a month and pays a $34 fee each time. How much does that cost him in a year?

A. $34

B. $136

C. $340

D. $408

GO DEEPER 1 — The yearly cost of fee habits

Question 2 of 5 · Knowledge Check

Jae pays a $34 overdraft fee about once a month, usually on debit purchases of under $10. What does that suggest about the true cost of those purchases?

A. Each small purchase really cost over $40

B. The fees do not matter because the purchases were small

C. Small purchases are exempt from overdraft fees by law

D. The bank refunds fees on purchases under $10 automatically

GO DEEPER 1 — The yearly cost of fee habits

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Low-balance alerts warn you before you overspend. A buffer, a small amount you treat as untouchable, absorbs timing surprises such as a bill that posts a day early.

Jae overdraws about once a month because he buys things without checking his balance. Which step would MOST directly prevent his overdrafts?

A. Use a different debit card from the same account

B. Make purchases late at night

C. Ask the bank for paper statements instead of e-statements

D. Set a low-balance alert and keep a small buffer in checking

GO DEEPER 1 — The yearly cost of fee habits

Question 4 of 5 · Knowledge Check

Jae pays $408 a year in overdraft fees (12 × $34). Keeping a $100 buffer, money he leaves in checking and never spends, would have prevented all 12 overdrafts. Compare keeping the buffer with paying the fees.

A. The buffer saves $408 and stays his money

B. The buffer costs him $100 per month

C. The buffer and the fees cost the same

D. The buffer saves $100 and costs $408

GO DEEPER 1 — The yearly cost of fee habits

Question 5 of 5 · Knowledge Check · Practical how-to

Some banks have reduced or ended overdraft fees, and others still charge them. What is the best way to learn your own bank's current policy?

A. Read the current fee schedule or ask the bank directly

B. Assume every bank charges exactly $35

C. Assume overdraft fees are banned everywhere

D. Rely on what a friend's bank charged for overdrafts five years ago

GO DEEPER 2 — Linked accounts and overdraft lines of credit

Question 1 of 5 · Learn and Apply

LEARN

An overdraft line of credit is a small loan account linked to checking. When checking runs short, it lends the difference, and you pay interest (and sometimes a fee) until you repay it. Interest for part of a year ≈ principal × annual rate × fraction of a year.

An overdraft line of credit covers shortfalls with a loan that charges 18% APR. Kim borrows $200 through it and repays it after one month. About how much interest does she pay (simple interest for 1/12 of a year)?

A. $0.30

B. $3

C. $18

D. $36

GO DEEPER 2 — Linked accounts and overdraft lines of credit

Question 2 of 5 · Knowledge Check

Kim compares two ways to cover a $200 shortfall for one month: a $35 overdraft fee, or about $3 of interest plus a $5 transfer fee on her line of credit. Which costs less and by how much?

A. The overdraft fee, by $27

B. The line of credit, by $32

C. They cost the same

D. The line of credit, by $27

GO DEEPER 2 — Linked accounts and overdraft lines of credit

Question 3 of 5 · Knowledge Check

Which risk applies to an overdraft line of credit but NOT to a savings-linked transfer?

A. Unpaid amounts keep collecting interest

B. It moves your own savings into checking

C. It can never be used more than once

D. It is covered by FDIC insurance if unpaid

GO DEEPER 2 — Linked accounts and overdraft lines of credit

Question 4 of 5 · Knowledge Check

Which account would a bank usually check before approving an overdraft line of credit?

A. Your school transcript

B. Nothing, since it is part of a checking account you already have

C. Your savings account interest rate

D. Your credit history, because it is a loan

GO DEEPER 2 — Linked accounts and overdraft lines of credit

Question 5 of 5 · Knowledge Check

Kim leaves $200 unpaid on the 18% line of credit for a full year (simple interest). How much interest accrues?

A. $3

B. $18

C. $36

D. $236

SET 6 · Money, Banking, and Financial Institutions

Savings accounts and deposit insurance

MAIN skill: Choose a savings account and explain how deposit insurance protects deposits

Outcome FL.BANK.06 · National topic: Saving · NJSLS 9.1.12: FI

Learning target: Savings options: interest rates, APY, and deposit insurance

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Saving versus spending money (5 questions)
  Why: The MAIN questions assume students separate money for later from money for now and know what interest on savings is.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Interest for a year is a percent of the balance.
- B3 · Math link → G6-S19-M (Grade 6 6.NS.B.3): Multiply multi-digit decimals
  Why: Rates written as decimals are multiplied by balances.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Interest rate versus APY (5 questions)
- Go Deeper 2: Deposit insurance limits and ownership categories (5 questions)

Practical skills beyond the standards: Checking whether an institution is insured (FDIC BankFind)

Content status: time-sensitive

Source: FDIC — Deposit insurance covers up to $250,000 per depositor, per insured bank, for each account ownership category; investment products are not deposits and are not FDIC insured.
https://www.fdic.gov/resources/deposit-insurance

MAIN — Choose a savings account and explain how deposit insurance protects deposits

Question 1 of 5 · Learn and Apply

LEARN

A savings account is a deposit account for money you are setting aside. It usually pays more interest than checking, and keeping savings separate makes it less likely you will spend it by accident. You can generally withdraw when you need to, though some banks limit how often.

Why do people usually keep money for a goal six months away in a savings account rather than in checking?

A. Savings usually earns more and stays apart from spending money

B. Savings accounts cannot be withdrawn from until the goal date

C. Checking accounts are not insured by the FDIC

D. Savings accounts guarantee the money will double

MAIN — Choose a savings account and explain how deposit insurance protects deposits

Question 2 of 5 · Learn and Apply

LEARN

Interest for one year ≈ balance × annual rate (as a decimal). To write a percent as a decimal, divide by 100: 3.5% = 0.035.

A savings account pays 3.5% interest per year. About how much interest will $1,600 earn in one year?

A. $5.60

B. $56

C. $560

D. $1,656

MAIN — Choose a savings account and explain how deposit insurance protects deposits

Question 3 of 5 · Learn and Apply

LEARN

The FDIC insures deposits at insured banks up to $250,000 per depositor, per insured bank, for each account ownership category (such as individual or joint). Credit union deposits have the same coverage through the NCUA. No depositor has lost insured funds since the FDIC began in 1934.

Grace has $300,000 in one individual savings account at a single FDIC-insured bank. If the bank failed, how much of her deposit would be above the standard insurance limit?

A. $0

B. $50,000

C. $250,000

D. $300,000

MAIN — Choose a savings account and explain how deposit insurance protects deposits

Question 4 of 5 · Learn and Apply

LEARN

FDIC insurance covers deposits: checking, savings, money market deposit accounts, and certificates of deposit. It does not cover stocks, bonds, mutual funds, crypto assets, annuities, or life insurance, even if a bank sells them. It also does not protect against investment losses.

Leo buys shares of a stock mutual fund through an investment desk inside his bank's branch. The fund loses value. Does FDIC insurance cover the loss?

A. Yes: anything bought at an FDIC-insured bank is insured

B. Yes, up to $250,000 of investment losses

C. Only if Leo paid for the fund with money from his checking account

D. No: investments are not deposits, even when sold at a bank

MAIN — Choose a savings account and explain how deposit insurance protects deposits
Question 5 of 5 · Knowledge Check

Ava needs money she can reach quickly for unexpected costs and does not want it to lose value. Which place fits best?

A. A stock fund that has risen sharply this year

B. A 5-year certificate of deposit with a penalty for early withdrawal

C. Cash hidden in her bedroom

D. An insured savings account

BACKWARD B1 · concept review — Saving versus spending money

Question 1 of 5 · Learn and Apply

LEARN

Checking is for money you will spend soon: bills and everyday purchases. Savings is for money you are setting aside for later: goals and emergencies.

Which money belongs in savings rather than checking?

A. Money set aside for a laptop you plan to buy next spring

B. Money for this week's groceries

C. Money to pay this month's phone bill when it arrives next week

D. Cash for lunch tomorrow

BACKWARD B1 · concept review — Saving versus spending money

Question 2 of 5 · Learn and Apply

LEARN

Interest on savings is money the bank pays you for keeping your money there. It is added to your balance.

Leila earns 2% interest on her $500 savings for a year. What does "earning interest" mean here?

A. The bank adds money to her account

B. The bank charges her 2% to hold her money

C. She owes the bank $10

D. Her $500 is locked until she turns 18

BACKWARD B1 · concept review — Saving versus spending money

Question 3 of 5 · Learn and Apply

LEARN

Percent means "per hundred." To write a percent as a decimal, divide by 100 (move the decimal point two places left).

What is 2% written as a decimal?

A. 0.002

B. 0.02

C. 0.2

D. 2.0

BACKWARD B1 · concept review — Saving versus spending money

Question 4 of 5 · Knowledge Check

Using 0.02 for 2%, how much interest does $500 earn in one year?

A. $1

B. $10

C. $100

D. $510

BACKWARD B1 · concept review — Saving versus spending money

Question 5 of 5 · Knowledge Check

Which statement is TRUE about money in an insured savings account?

A. It always grows faster than prices rise

B. It can be withdrawn with no limits of any kind at every bank in the country

C. It earns the same interest at every bank

D. Its value in dollars does not go down because of market changes

GO DEEPER 1 — Interest rate versus APY

Question 1 of 5 · Learn and Apply

LEARN

The interest rate is the yearly rate before compounding. APY (annual percentage yield) shows what you actually earn in a year once interest is added to your balance and itself earns interest (compounding). Banks must show APY for savings, so use APY to compare accounts.

Two savings accounts show:
Bank A: interest rate 4.00%, compounded monthly; APY 4.07%
Bank B: APY 4.05%
Which number should Mo use to compare them fairly?

A. The APY of each account

B. The interest rate of Bank A and the APY of Bank B

C. The interest rate of each, ignoring APY

D. Whichever number is printed larger in the ad

GO DEEPER 1 — Interest rate versus APY

Question 2 of 5 · Learn and Apply

LEARN

APY is the actual percent your money grows in one year, so one year of earnings ≈ balance × APY.

An account has an APY of 4.07%. About how much will $2,000 earn in one year if the rate stays the same and nothing is withdrawn?

A. $8.14

B. $81.40

C. $814.00

D. $2,081.40

GO DEEPER 1 — Interest rate versus APY

Question 3 of 5 · Learn and Apply

LEARN

APY (annual percentage yield) is the percent your money actually grows in one year. The stated interest rate is the yearly rate before compounding.

Why is APY usually a little higher than the stated interest rate?

A. Banks add a bonus to every account

B. APY includes extra deposits you plan to make later in the year

C. APY is the rate before taxes are added

D. Interest that is added during the year also earns interest

GO DEEPER 1 — Interest rate versus APY

Question 4 of 5 · Learn and Apply

LEARN

Most savings accounts have variable rates: the bank can raise or lower them, often when market interest rates change. A certificate of deposit usually locks a rate for its term.

A savings rate is "variable." What does that mean?

A. The bank can change the rate over time

B. The rate is fixed until the account is closed

C. The rate depends on how many times you log in

D. The rate is negative in some months

GO DEEPER 1 — Interest rate versus APY

Question 5 of 5 · Knowledge Check

An ad shows "5.00% APY*", and the fine print says "*on balances up to $1,000; 0.50% APY on the amount above $1,000." Sara deposits $5,000. About how much interest will she earn in one year?

A. $25

B. $50

C. $70

D. $250

GO DEEPER 2 — Deposit insurance limits and ownership categories

Question 1 of 5 · Learn and Apply

LEARN

The $250,000 limit applies per depositor, per insured bank, per ownership category. Money at two different banks is insured separately. (Two "brands" of the same bank are one bank for insurance purposes.)

Marcus has $200,000 in an individual account at Bank A and $200,000 in an individual account at Bank B. Both banks are FDIC insured and separate. How much of his money is insured?

A. $0

B. $200,000

C. $250,000

D. $400,000

GO DEEPER 2 — Deposit insurance limits and ownership categories

Question 2 of 5 · Learn and Apply

LEARN

Joint accounts are a separate ownership category from individual accounts. Each co-owner's share of joint accounts at one bank is insured up to $250,000.

Sam and Pat own a joint account with $500,000 at one insured bank. Joint accounts are insured up to $250,000 per co-owner. How much is insured?

A. $125,000

B. $250,000

C. $500,000

D. $1,000,000

GO DEEPER 2 — Deposit insurance limits and ownership categories

Question 3 of 5 · Knowledge Check

Which product is covered by FDIC insurance when bought at an insured bank?

A. Shares of an index fund

B. A cryptocurrency purchase

C. The contents of a safe deposit box

D. A 12-month certificate of deposit

GO DEEPER 2 — Deposit insurance limits and ownership categories

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Only deposits at FDIC-insured banks (or NCUA-insured credit unions) are covered by deposit insurance. The FDIC warns consumers about companies that misrepresent their products as FDIC insured.

A website for a company that sells crypto says, "Your funds are safe — like a bank." What should a careful saver conclude?

A. The funds must be FDIC insured

B. The company is a federally chartered bank

C. The NCUA insures every crypto platform that operates in the United States

D. That claim does not mean the funds are FDIC insured

GO DEEPER 2 — Deposit insurance limits and ownership categories

Question 5 of 5 · Knowledge Check · Practical how-to

Ella has $260,000 in one individual account at an insured bank and wants all of it insured. Which change would accomplish that most directly?

A. Move $10,000 or more to an account at a different insured bank

B. Split it into two individual accounts at the same bank

C. Ask the bank to raise her personal limit

D. Withdraw the extra $10,000 and invest it in stocks for added safety

SET 7 · Money, Banking, and Financial Institutions

Checks, transfers, and payment apps

MAIN skill: Choose and use payment methods safely: checks, electronic transfers, and payment apps

Outcome FL.BANK.07 · National topic: Spending · NJSLS 9.1.12: FI

Learning target: Payment methods: checks, electronic payments, and payment apps; consumer protections

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Ways to pay (5 questions)
  - Why: Choosing a payment method safely requires knowing what each method is and where the money comes from.
- B2 · Math link → G5-S12-M (Grade 5 5.NBT.A.3.a): Read and write decimals to thousandths using numerals and words
  - Why: Writing check amounts requires reading decimals and writing cents as hundredths.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Wires, ACH transfers, and official checks (5 questions)
- Go Deeper 2: Payment app safety (5 questions)

Practical skills beyond the standards: Writing and endorsing checks; Mobile check deposit; Verifying wire instructions

Content status: time-sensitive

Source: CFPB (Regulation E) — Report unauthorized electronic transfers that appear on a statement within 60 days of the statement date to keep liability limits. https://www.consumerfinance.gov/rules-policy/regulations/1005/6/

MAIN — Choose and use payment methods safely: checks, electronic transfers, and payment apps

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

A check is a written order telling your bank to pay someone from your account. You write the date, the payee (who gets paid), the amount in numbers, the amount in words with cents as a fraction of 100, and your signature. The words are the legal amount if the two differ.

Nora writes a check for $1,254.07. How should she write the amount in words on the check?

A. One thousand two hundred fifty-four and 07/100 dollars

B. One thousand two hundred fifty-four and 7/10 dollars

C. Twelve hundred fifty-four point zero seven

D. One thousand two hundred forty-five and 07/100 dollars

MAIN — Choose and use payment methods safely: checks, electronic transfers, and payment apps

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

To deposit or cash a check made out to you, you "endorse" it by signing the back. Adding "For deposit only" (a restrictive endorsement) means the check can only be deposited, which protects it if it is lost. For mobile deposit, banks often require "For mobile deposit only" too.

Ben receives a paycheck made out to him and wants to deposit it at an ATM. What should he write on the back?

A. Nothing; endorsing a check is optional

B. His PIN, so the ATM can verify him

C. His account balance, so the bank can update it

D. His signature and "For deposit only"

MAIN — Choose and use payment methods safely: checks, electronic transfers, and payment apps

Question 3 of 5 · Learn and Apply

LEARN

Peer-to-peer (P2P) payment apps move money quickly between people. Money you send yourself, even to a scammer, is usually treated as authorized and is often hard to get back. Federal error protections focus on transfers you did not authorize. Use P2P apps mainly with people you know and trust.

Mia sends $60 through a payment app to someone selling concert tickets online. The tickets never arrive. Which statement is most accurate?

A. The app must refund every payment that goes wrong

B. Her bank will reverse the payment automatically within one business day

C. The seller must legally deliver the tickets

D. Payments she authorized are often hard or impossible to reverse

MAIN — Choose and use payment methods safely: checks, electronic transfers, and payment apps

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Mobile check deposit lets you photograph a signed check in your bank's app. The bank may hold part of the money for a few days. Keep the paper check until the deposit is final, then destroy it securely so it cannot be deposited twice or misused.

After depositing a check with his phone, what should Kai do with the paper check?

A. Keep it until the deposit is final, then destroy it

B. Deposit the same check again at the bank to be safe

C. Throw it in the trash right after taking the photo

D. Give it back to the person who wrote it

MAIN — Choose and use payment methods safely: checks, electronic transfers, and payment apps

Question 5 of 5 · Knowledge Check

Zara's landlord asks for rent in a way that leaves a record of payment. Which method fits BEST?

A. A check or an electronic transfer from her bank account

B. Cash handed over without a receipt

C. A gift card code sent by text

D. A wire transfer to an account number she has never verified

BACKWARD B1 · concept review — Ways to pay

Question 1 of 5 · Learn and Apply

LEARN

Common ways to pay: cash; debit cards and checks (from your account); electronic transfers such as online bill pay and automatic payments (from your account, electronically); credit cards (borrowed money); and prepaid or gift cards (money loaded in advance).

Which payment method moves money directly from your bank account electronically on a date you set?

A. A paper check that the store mails to you each month

B. A credit card

C. A store gift card

D. An online bill payment or automatic transfer

BACKWARD B1 · concept review — Ways to pay

Question 2 of 5 · Learn and Apply

LEARN

A payment record proves you paid. Bank statements, cleared checks, and confirmation numbers are records. Cash leaves no record unless you get a receipt.

Which method gives the LEAST proof that you paid?

A. A check that the bank later shows as cleared

B. A debit card purchase listed on the statement

C. An online bill payment with a confirmation number

D. Cash with no receipt

BACKWARD B1 · concept review — Ways to pay

Question 3 of 5 · Learn and Apply

LEARN

A prepaid or gift card holds a set amount of money. Each purchase is subtracted until the card reaches $0.

A gift card loaded with $50 is used to buy a $12 item. What is left on the card?

A. $12

B. $38

C. $50

D. $62

BACKWARD B1 · concept review — Ways to pay
Question 4 of 5 · Knowledge Check

Who is the "payee" on a check?

A. The person or business that receives the money
B. The account holder who signs and writes the check
C. The bank that prints the check
D. The cashier who accepts the check

BACKWARD B1 · concept review — Ways to pay

Question 5 of 5 · Knowledge Check

Which situation makes a payment app MOST risky to use?

A. Paying a stranger online before receiving the item

B. Splitting a dinner bill with a close friend

C. Paying a family member back for groceries

D. Sending rent money to a roommate you have lived with for a year

GO DEEPER 1 — Wires, ACH transfers, and official checks

Question 1 of 5 · Learn and Apply

LEARN

A wire transfer moves money between banks quickly, often the same day, and is generally final once sent. ACH transfers (used for direct deposit and online bill pay) move money between bank accounts more slowly and have some ways to return errors. Scammers often ask for wires because they are fast and hard to reverse.

Which payment is generally the hardest to reverse once sent?

A. A credit card purchase

B. A check that has not been cashed yet

C. A debit card purchase you did not authorize

D. A wire transfer

GO DEEPER 1 — Wires, ACH transfers, and official checks

Question 2 of 5 · Learn and Apply

LEARN

A cashier's check is drawn on the bank's own funds, so a real one is very reliable. But fake cashier's checks are common. The bank may make the money available before discovering the check is fake; when it bounces, you owe the bank the full amount.

A buyer sends Liam a cashier's check for $1,500 for a $500 phone and asks him to wire back the extra $1,000. What is most likely happening?

A. A fake-check scam

B. A generous buyer making an honest mistake

C. A normal practice for cashier's checks

D. A bank error that the bank will cover

GO DEEPER 1 — Wires, ACH transfers, and official checks

Question 3 of 5 · Learn and Apply

LEARN

The ACH (Automated Clearing House) network moves money electronically between bank accounts in batches. It is cheaper and slower than a wire transfer.

Which is a typical use of an ACH transfer?

A. Buying groceries with cash

B. Paying a bill with a paper money order bought at a store

C. Swiping a credit card at a store

D. An employer's direct deposit of paychecks

GO DEEPER 1 — Wires, ACH transfers, and official checks

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Criminals hack or fake emails and send new "updated" wire instructions so money goes to their account. Because wires are hard to reverse, verify instructions through a trusted phone number, not one in the suspicious email.

Before wiring money for a home or apartment deposit, what is the safest step?

A. Use the instructions in the most recent email, even if they changed

B. Wire the money quickly so you do not lose the apartment

C. Ask the sender to text you the account number again

D. Call a phone number you already know is real to confirm the instructions

GO DEEPER 1 — Wires, ACH transfers, and official checks

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Until a check is paid by your bank, you can ask the bank not to pay it. Banks usually charge a fee for this service, and it does not work on a check that has already cleared.

Ruth wrote a check and then learned it was lost in the mail before it was cashed. What service could stop it?

A. A stop payment order through her bank

B. A wire recall, which works on all checks

C. Reporting the check to the IRS

D. Writing a second check for the same amount

GO DEEPER 2 — Payment app safety

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

A common scam claims you received money "by mistake" and asks you to send it back. Sometimes the original payment was made with stolen information and is later reversed, leaving you with the loss. Verify inside your own app or bank, never through a link or message.

Someone texts Ava: "I sent you $200 by mistake — please send it back!" Her app shows no new money in her account. What should she do?

A. Check her own account directly and send nothing

B. Send $200 back right away to be polite

C. Reply with her bank login so they can fix it

D. Send $100 as a compromise

GO DEEPER 2 — Payment app safety

Question 2 of 5 · Knowledge Check · Practical how-to

Which setting adds the most protection to a payment app?

A. Sharing your login with a parent and a friend so they can watch for fraud

B. Using the same password as your email

C. Turning off notifications

D. Multi-factor authentication and a passcode on the app

GO DEEPER 2 — Payment app safety

Question 3 of 5 · Learn and Apply

LEARN

Real banks and payment apps do not ask you to move money to a "safe account" to protect it. Imposters pretend to be bank staff, tech support, or government officials and create urgency.

A "customer support" caller says your payment app is hacked and asks you to send your balance to a "safe account." What is this?

A. A standard security procedure

B. A government requirement

C. A normal account-security check

D. An imposter scam

GO DEEPER 2 — Payment app safety

Question 4 of 5 · Knowledge Check

Which payment is generally protected under federal error rules (Regulation E)?

A. A transfer someone else made from your account without permission

B. A payment you chose to send to an online seller who never shipped

C. A payment you sent to the wrong person after typing their name

D. Money you lost gambling with an app

GO DEEPER 2 — Payment app safety

Question 5 of 5 · Knowledge Check · Practical how-to

Before sending money with a payment app to someone new, which step lowers the risk the MOST?

A. Sending a small test payment to a stranger

B. Checking that the stranger's profile has a photo and many friends

C. Asking the stranger to promise to deliver

D. Confirming who the recipient is through a source you trust

SET 8 · Earning Income, Employment, and Paychecks

Hourly wages and overtime

MAIN skill: Calculate gross pay for hourly work, including overtime

Outcome FL.INCOME.08 · National topic: Earning Income · NJSLS 9.1.12: PB

Learning target: Calculate gross pay for hourly work; overtime and tipped wages

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Wages, hours, and gross pay (5 questions)
  Why: Gross pay and overtime problems require knowing that a wage is pay per hour and how hours convert to decimals.
- B2 · Math link → G6-S19-M (Grade 6 6.NS.B.3): Multiply multi-digit decimals
  Why: Gross pay multiplies a decimal wage by decimal hours.
- B3 · Math link → G6-S03-M (Grade 6 6.RP.A.2): Find and describe a unit rate
  Why: An hourly wage is a unit rate (dollars per hour).

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Overtime rules in detail (5 questions)
- Go Deeper 2: Tips and tipped wages (5 questions)

Practical skills beyond the standards: Reading a timecard

Content status: time-sensitive

Source: U.S. Department of Labor — Under the FLSA, covered nonexempt employees receive overtime pay of at least 1.5 times the regular rate for hours over 40 in a workweek. https://www.dol.gov/agencies/whd/overtime

Source: IRS (Publication 531) — Employees who receive $20 or more in tips in a month must report them to their employer; tips are taxable income. https://www.irs.gov/publications/p531

MAIN — Calculate gross pay for hourly work, including overtime

Question 1 of 5 · Learn and Apply

LEARN

An hourly wage is the amount paid for each hour of work. Gross pay is the total earned before taxes or any other deductions are taken out. For hourly work: gross pay = hourly wage × hours worked.

Jada earns $16.50 per hour and works 24 hours this week. What is her gross pay for the week?

A. $40.50

B. $384.00

C. $396.00

D. $3,960.00

MAIN — Calculate gross pay for hourly work, including overtime

Question 2 of 5 · Learn and Apply

LEARN

Federal law (the Fair Labor Standards Act) requires most hourly employees to be paid at least 1.5 times their regular rate for hours worked over 40 in a workweek. This is "time and a half." Hours up to 40 are paid at the regular rate.

Malik is an hourly employee who earns $18 per hour. He works 46 hours in one workweek. Under the federal overtime rule, what is his gross pay?

A. $828

B. $855

C. $882

D. $1,242

MAIN — Calculate gross pay for hourly work, including overtime

Question 3 of 5 · Learn and Apply

LEARN

Paychecks show two key amounts. Gross pay is everything earned for the period. Net pay ("take-home pay") is what is left after deductions such as taxes and benefit costs, and it is what is actually deposited.

Malik's pay stub shows "Gross pay: $882." What does gross pay mean?

A. His total earnings before any deductions

B. The amount deposited into his bank account

C. His pay after taxes but before his retirement contribution

D. The overtime portion of his paycheck only

MAIN — Calculate gross pay for hourly work, including overtime

Question 4 of 5 · Learn and Apply

LEARN

Timecards often record hours in decimals: 15 minutes is 0.25 hour, 30 minutes is 0.5 hour, and 45 minutes is 0.75 hour. Add the hours first, then multiply by the hourly wage.

Ana's timecard shows Monday 6.5 hours, Wednesday 4.25 hours, and Saturday 8 hours. She earns $15.20 per hour. What is her gross pay?

A. $28.50

B. $273.60

C. $285.00

D. $296.40

MAIN — Calculate gross pay for hourly work, including overtime

Question 5 of 5 · Knowledge Check

Two summer jobs require 30 hours a week. Job A pays $17.25 per hour. Job B pays a flat $500 per week. Which pays more per week, and by how much?

A. Job A, by $17.50

B. Job B, by $17.50

C. Job A, by $17.25

D. They pay the same amount

BACKWARD B1 · concept review — Wages, hours, and gross pay

Question 1 of 5 · Learn and Apply

LEARN

A wage is a rate: dollars per hour. The more hours you work, the more you earn.

A job pays $14 per hour. What does that mean?

A. The worker earns $14 for the whole day

B. The worker earns $14 per week no matter the hours

C. The worker pays $14 for each hour of training

D. The worker earns $14 for each hour worked

BACKWARD B1 · concept review — Wages, hours, and gross pay

Question 2 of 5 · Learn and Apply

LEARN

Earnings for hourly work = wage × hours.

Rina earns $14 per hour and works 10 hours. How much does she earn?

A. $1.40

B. $14

C. $24

D. $140

BACKWARD B1 · concept review — Wages, hours, and gross pay

Question 3 of 5 · Learn and Apply

LEARN

An hour has 60 minutes. To change minutes to part of an hour, divide by 60: 15 ÷ 60 = 0.25.

How many hours is 7 hours and 15 minutes, written as a decimal?

A. 7.15 hours

B. 7.5 hours

C. 7.75 hours

D. 7.25 hours

BACKWARD B1 · concept review — Wages, hours, and gross pay

Question 4 of 5 · Learn and Apply

LEARN

"Gross" pay is the full amount earned. "Net" pay, also called take-home pay, is what remains after deductions.

Which number on a paycheck shows earnings BEFORE taxes are taken out?

A. Gross pay

B. Net pay

C. Take-home pay

D. Direct deposit amount

BACKWARD B1 · concept review — Wages, hours, and gross pay

Question 5 of 5 · Learn and Apply

LEARN

A raise in the hourly wage adds that amount for every hour worked.

Leo's wage rises from $15 to $16 per hour. He works 20 hours a week. How much more does he earn each week?

A. $1

B. $16

C. $20

D. $320

GO DEEPER 1 — Overtime rules in detail

Question 1 of 5 · Learn and Apply

LEARN

Federal overtime is based on hours in a WORKWEEK (any fixed, repeating 7-day period), not hours in a day. A few states also require daily overtime, so state law can add protection.

Jon works 10 hours a day, Monday through Thursday, and no other hours that week. Under the federal rule, how many overtime hours does he earn?

A. 8 hours

B. 2 hours

C. 10 hours

D. 0 hours

GO DEEPER 1 — Overtime rules in detail

Question 2 of 5 · Learn and Apply

LEARN

Some salaried employees are "exempt" from overtime because they are paid at least a minimum salary and their main duties are executive, administrative, or professional. Being paid a salary alone does not make someone exempt; the duties test also matters.

A salaried store manager meets the legal tests for an "exempt" employee and works 50 hours one week. What overtime pay does federal law require?

A. No overtime pay is required

B. Time and a half for the 10 extra hours

C. Double time for every hour over 40

D. One extra day off for each hour over 40

GO DEEPER 1 — Overtime rules in detail

Question 3 of 5 · Knowledge Check

Pia earns $20 per hour and works 52 hours in a workweek. What is her gross pay?

A. $1,040

B. $1,160

C. $1,280

D. $1,560

GO DEEPER 1 — Overtime rules in detail

Question 4 of 5 · Learn and Apply

LEARN

The federal overtime law does not require extra pay for holidays or weekends. Many employers offer holiday pay as a policy, and union contracts may require it, but that is not the federal rule.

Does federal law require employers to pay time and a half for working on a holiday, when the week totals 32 hours?

A. No; it depends on employer policy

B. Yes, for every federal holiday

C. Yes, but only on weekends

D. Yes, if the employee asks for it in writing

GO DEEPER 1 — Overtime rules in detail

Question 5 of 5 · Knowledge Check

Job A pays $19 per hour and usually schedules 45 hours a week (overtime applies). How much does Job A pay for a typical week?

A. $855.00

B. $902.50

C. $950.00

D. $1,282.50

GO DEEPER 2 — Tips and tipped wages

Question 1 of 5 · Learn and Apply

LEARN

In many restaurant jobs, pay has two parts: an hourly cash wage from the employer and tips from customers. Some states allow a lower cash wage for tipped workers (a "tip credit"), and others require the full minimum wage before tips.

Kai, a server, worked 25 hours at a cash wage of $5.00 per hour and earned $410 in tips. What were his total earnings for the week?

A. $125

B. $410

C. $440

D. $535

GO DEEPER 2 — Tips and tipped wages

Question 2 of 5 · Knowledge Check

Kai earned $535 in wages and tips for 25 hours of work. What were his average earnings per hour?

A. $5.00

B. $16.40

C. $21.40

D. $22.40

GO DEEPER 2 — Tips and tipped wages

Question 3 of 5 · Learn and Apply

LEARN

Tips are taxable income. Employees who receive $20 or more in tips in a month must report them to their employer, who includes them in payroll records and withholding.

Kai received $410 in tips this month. What does the IRS require?

A. Nothing; tips are gifts and never taxed

B. He reports tips only in months when they exceed $1,000 in total

C. The customer reports the tips for him

D. He reports them to his employer; they are taxable

GO DEEPER 2 — Tips and tipped wages

Question 4 of 5 · Learn and Apply

LEARN

When an employer pays a lower cash wage and counts tips toward the minimum wage, the employer must make up the difference if wages plus tips fall below the full minimum wage for the hours worked.

In a state where the minimum wage is $15.00 per hour and a tip credit is allowed, Lia works 20 hours at a $5.00 cash wage and earns $150 in tips. Federal rules require her total to reach at least minimum wage for those hours. How much must her employer add?

A. $0

B. $50

C. $150

D. $200

GO DEEPER 2 — Tips and tipped wages

Question 5 of 5 · Knowledge Check

Kai's tips vary from $250 to $500 a week. Which budgeting approach is safest?

A. Plan around a lower weekly amount and save the extra

B. Plan around his best week ever

C. Plan around the average and spend any extra right away

D. Ignore tips completely and skip budgeting

SET 9 · Earning Income, Employment, and Paychecks

Salaries, hourly pay, and pay periods

MAIN skill: Convert between annual salary, hourly pay, and pay per paycheck

Outcome FL.INCOME.09 · National topic: Earning Income · NJSLS 9.1.12: PB

Learning target: Compare compensation: hourly wages, salaries, and pay periods

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Weeks, months, and years in pay (5 questions)
  Why: Converting pay requires knowing how many weeks and months are in a year and that a month is about 4.33 weeks, not 4.
- B2 · Math link → G6-S20-M (Grade 6 6.NS.B.3): Divide multi-digit decimals
  Why: Pay-per-period problems divide yearly pay by the number of paychecks.
- B3 · Math link → G7-S07-M (Grade 7 7.RP.A.3): Solve multistep ratio problems
  Why: Converting between hourly, weekly, monthly, and yearly pay chains several rates.

After 5 of 5 correct, Go Deeper unlocks (a chain):

Content status: stable

MAIN — Convert between annual salary, hourly pay, and pay per paycheck

Question 1 of 5 · Learn and Apply

LEARN

A salary is a fixed yearly amount, often paid in equal paychecks. To compare a salary with an hourly wage, use the number of hours worked in a year. A common full-time estimate is 40 hours × 52 weeks = 2,080 hours.

A full-time job pays a salary of $41,600 per year. Full-time is 40 hours a week for 52 weeks (2,080 hours). What is the equivalent hourly rate?

A. $10.00

B. $20.00

C. $800.00

D. $3,466.67

MAIN — Convert between annual salary, hourly pay, and pay per paycheck

Question 2 of 5 · Learn and Apply

LEARN

Pay frequency affects each paycheck's size: weekly = 52 paychecks per year; biweekly (every two weeks) = 26; semimonthly (twice a month, such as the 1st and 15th) = 24; monthly = 12.

Ryan earns $41,600 a year, paid biweekly (every two weeks). What is his gross pay per paycheck?

A. $800.00

B. $1,600.00

C. $1,733.33

D. $3,466.67

MAIN — Convert between annual salary, hourly pay, and pay per paycheck

Question 3 of 5 · Knowledge Check

Erin earns $41,600 a year, paid semimonthly (twice a month, 24 paychecks a year). What is her gross pay per paycheck (to the nearest cent)?

A. $1,600.00

B. $1,733.33

C. $1,840.00

D. $3,466.67

MAIN — Convert between annual salary, hourly pay, and pay per paycheck

Question 4 of 5 · Knowledge Check

Dev earns $22 per hour and works 40 hours a week for 52 weeks. What is his yearly gross pay?

A. $880

B. $3,813.33

C. $42,240

D. $45,760

MAIN — Convert between annual salary, hourly pay, and pay per paycheck

Question 5 of 5 · Learn and Apply

LEARN

A year has 12 months but 52 weeks. Schedules based on weeks do not line up evenly with months, while schedules based on dates in the month always do.

Which pay schedule gives a worker three paychecks in two months of most years?

A. Semimonthly (twice a month)

B. Monthly

C. Annual

D. Biweekly (every two weeks)

BACKWARD B1 · concept review — Weeks, months, and years in pay

Question 1 of 5 · Learn and Apply

LEARN

A year has 52 weeks (and a day or two more). Since 52 ÷ 12 ≈ 4.33, a month is about 4.33 weeks, not exactly 4.

How many weeks are in a year?

A. 12

B. 48

C. 52

D. 365

BACKWARD B1 · concept review — Weeks, months, and years in pay

Question 2 of 5 · Learn and Apply

LEARN

To turn weekly pay into monthly pay accurately, find yearly pay first (× 52), then divide by 12.

Tom earns $500 a week. Which is the best estimate of his MONTHLY pay?

A. About $2,167

B. $2,000

C. $6,000

D. $125

BACKWARD B1 · concept review — Weeks, months, and years in pay

Question 3 of 5 · Learn and Apply

LEARN

To turn monthly pay into yearly pay, multiply by 12.

A job pays $2,400 per month. What is the yearly pay?

A. $200

B. $9,600

C. $28,800

D. $124,800

BACKWARD B1 · concept review — Weeks, months, and years in pay

Question 4 of 5 · Learn and Apply

LEARN

Hourly workers are paid for each hour worked. Salaried workers are paid a set amount per year, usually split evenly across paychecks, regardless of small changes in hours.

What is a "salary"?

A. Pay that changes with every hour worked

B. Money earned only from tips

C. A bonus paid at the end of the year

D. A set yearly amount, paid in paychecks

BACKWARD B1 · concept review — Weeks, months, and years in pay

Question 5 of 5 · Knowledge Check

How many hours does a full-time worker at 40 hours a week work in 52 weeks?

A. 160

B. 480

C. 2,000

D. 2,080

GO DEEPER 1 — Comparing job offers by yearly pay

Question 1 of 5 · Learn and Apply

LEARN

To compare offers, put them on the same basis, usually yearly gross pay. Count only weeks that are actually paid.

Offer A: $21 per hour, 40 hours a week, 50 paid weeks a year. Offer B: salary of $43,000. Which pays more per year, and by how much?

A. Offer A, by $1,000

B. Offer A, by $680

C. They pay the same

D. Offer B, by $1,000

GO DEEPER 1 — Comparing job offers by yearly pay

Question 2 of 5 · Knowledge Check

Offer C pays $19 per hour, but expected overtime adds 5 hours at time and a half every week for 50 weeks. What is the yearly pay from the overtime alone?

A. $142.50

B. $4,750

C. $7,125

D. $9,500

GO DEEPER 1 — Comparing job offers by yearly pay

Question 3 of 5 · Knowledge Check

Why should expected overtime be treated cautiously when comparing offers?

A. Overtime hours may not be guaranteed and can change

B. Overtime is illegal in most jobs

C. Overtime pay is never taxed

D. Overtime always lowers your hourly rate

GO DEEPER 1 — Comparing job offers by yearly pay

Question 4 of 5 · Knowledge Check

Two offers both pay $45,000. Offer D is paid monthly; Offer E is paid biweekly. Which statement is TRUE?

A. Offer E pays more because there are more paychecks

B. Offer D pays more because each paycheck is larger

C. Offer E pays less because of extra processing

D. They pay the same per year

GO DEEPER 1 — Comparing job offers by yearly pay

Question 5 of 5 · Knowledge Check

Offer F: $40,000 salary plus an expected $3,000 yearly bonus that is not guaranteed. Offer G: $42,500 salary. If the bonus is paid, which pays more and by how much?

A. Offer F, by $500

B. Offer G, by $500

C. Offer G, by $2,500

D. Offer F, by $3,000

GO DEEPER 2 — Raises and percent changes in pay

Question 1 of 5 · Learn and Apply

LEARN

A raise given as a percent is a percent of current pay: raise = pay × rate (as a decimal). New pay = pay × (1 + rate).

Noor earns $45,000 and receives a 3% raise. What is the raise in dollars?

A. $135

B. $1,350

C. $13,500

D. $46,350

GO DEEPER 2 — Raises and percent changes in pay

Question 2 of 5 · Knowledge Check

Noor earns $45,000 and receives a 3% raise. What is her new salary?

A. $45,135

B. $46,350

C. $48,000

D. $58,500

GO DEEPER 2 — Raises and percent changes in pay

Question 3 of 5 · Learn and Apply

LEARN

Purchasing power is what your money can buy. If prices rise faster than your pay, your pay buys less, even though the number of dollars went up.

Prices rose 4% the same year Noor got a 3% raise. What happened to what her pay can buy?

A. It rose by 3%

B. It rose by 7%

C. It stayed exactly the same

D. It fell slightly

GO DEEPER 2 — Raises and percent changes in pay

Question 4 of 5 · Learn and Apply

LEARN

Percent change = (new − old) ÷ old × 100.

Noor's pay rose from $46,350 to $48,204. What percent raise was this?

A. 0.4%

B. 3%

C. 4%

D. 1,854%

GO DEEPER 2 — Raises and percent changes in pay

Question 5 of 5 · Knowledge Check

Which is worth more over the next year: a one-time $1,000 bonus, or a 2% raise on a $40,000 salary?

A. The bonus: $1,000 vs $800

B. The raise: $2,000 vs $1,000

C. The raise: $8,000 vs $1,000

D. Neither; both are worth $1,000

SET 10 · Earning Income, Employment, and Paychecks

Reading a pay stub

MAIN skill: Read a pay stub and calculate deductions and net pay

Outcome FL.INCOME.10 · National topic: Earning Income · NJSLS 9.1.12: PB, EG

Learning target: 12-6a calculate the taxes likely to be withheld from pay; read a pay statement

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Gross pay versus net pay (5 questions)
  Why: Students who confuse gross and net pay cannot read a pay stub or budget correctly.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: FICA and other deductions are percents of gross pay.
- B3 · Math link → G6-S17-M (Grade 6 6.NS.B.3): Subtract multi-digit decimals
  Why: Net pay is gross pay minus deductions in dollars and cents.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Pre-tax and after-tax deductions (5 questions)
- Go Deeper 2: Year-to-date totals and checking for errors (5 questions)

Practical skills beyond the standards: Checking a pay stub for errors

Content status: time-sensitive

Source: IRS (Topic 751) — Employee Social Security tax is 6.2% (up to the annual wage base) and Medicare tax is 1.45% of wages. https://www.irs.gov/taxtopics/tc751

MAIN — Read a pay stub and calculate deductions and net pay

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

A pay stub (pay statement) shows: gross pay; deductions, which are amounts taken out for taxes, retirement, insurance, and more; net pay, which is gross pay minus deductions; and year-to-date (YTD) totals. Net pay is your take-home pay.

Which amount on a pay stub is the money actually deposited into the worker's bank account?

A. Net pay

B. Gross pay

C. Year-to-date gross

D. Total deductions

MAIN — Read a pay stub and calculate deductions and net pay

Question 2 of 5 · Learn and Apply

LEARN

FICA taxes fund Social Security and Medicare. Employees pay 6.2% of wages for Social Security (up to a yearly wage limit) and 1.45% for Medicare. The employer pays a matching amount.

Gabriel's gross pay is $1,200.00. The Social Security tax rate for employees is 6.2%. How much Social Security tax is withheld?

A. $7.44

B. $17.40

C. $74.40

D. $744.00

MAIN — Read a pay stub and calculate deductions and net pay

Question 3 of 5 · Knowledge Check

Gabriel's gross pay is $1,200.00. The Medicare tax rate for employees is 1.45%. How much Medicare tax is withheld?

A. $1.74

B. $17.40

C. $74.40

D. $174.00

MAIN — Read a pay stub and calculate deductions and net pay

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

To find net pay, add all the deductions, then subtract the total from gross pay. Retirement contributions are deductions too, even though the money is still yours in a retirement account.

Pay stub (biweekly): Gross pay $1,200.00 | 401(k) contribution (pre-tax) $60.00 | Federal income tax $88.00 | Social Security $74.40 | Medicare $17.40 | State income tax $22.80
What is Gabriel's net pay?

A. $262.60

B. $937.40

C. $997.40

D. $1,200.00

MAIN — Read a pay stub and calculate deductions and net pay

Question 5 of 5 · Learn and Apply

LEARN

Deductions go to different places. Income taxes and Social Security and Medicare taxes are sent to the government. Retirement plan contributions are deposited into an account in the worker's name.

Pay stub (biweekly): Gross pay $1,200.00 | 401(k) contribution (pre-tax) $60.00 | Federal income tax $88.00 | Social Security $74.40 | Medicare $17.40 | State income tax $22.80
Which deduction is money Gabriel still owns after it leaves his paycheck?

A. The federal income tax

B. The Social Security tax

C. The state income tax

D. The 401(k) contribution

BACKWARD B1 · concept review — Gross pay versus net pay

Question 1 of 5 · Learn and Apply

LEARN

Many workers have their paychecks deposited into bank accounts. The amount deposited is net pay: gross pay minus deductions such as taxes and benefit costs. Gross pay is what you earned; net pay is what you receive.

Ivy's job offer says "$18 per hour." Her first paycheck is smaller than 18 × her hours. Why?

A. Deductions were taken from her gross pay

B. Her employer made an error by paying less than promised

C. The bank charged a fee for depositing her paycheck

D. Her hourly wage was lowered in her first week

BACKWARD B1 · concept review — Gross pay versus net pay

Question 2 of 5 · Learn and Apply

LEARN

Net pay = gross pay − total deductions.

Gross pay $500. Deductions $85. What is net pay?

A. $85

B. $415

C. $500

D. $585

BACKWARD B1 · concept review — Gross pay versus net pay

Question 3 of 5 · Learn and Apply

LEARN

Gross pay = net pay + deductions.

Net pay is $640 and deductions are $160. What was gross pay?

A. $160

B. $480

C. $640

D. $800

BACKWARD B1 · concept review — Gross pay versus net pay

Question 4 of 5 · Knowledge Check

Ivy earns $18 per hour, but her take-home pay is less after deductions. Which amount should she use to plan her monthly spending?

A. Her gross pay

B. Her hourly wage times 40

C. Her yearly salary divided by 4

D. Her net pay

BACKWARD B1 · concept review — Gross pay versus net pay

Question 5 of 5 · Knowledge Check

Which item is a deduction, NOT part of gross pay?

A. Overtime pay

B. Hourly wages

C. A sales commission

D. Federal income tax withheld

GO DEEPER 1 — Pre-tax and after-tax deductions

Question 1 of 5 · Learn and Apply

LEARN

A pre-tax deduction is taken out before income tax is figured, which lowers taxable wages. A traditional 401(k) contribution is pre-tax for income tax, but Social Security and Medicare taxes still apply to it.

Pay stub (biweekly): Gross pay $1,200.00 | 401(k) contribution (pre-tax) $60.00 | Federal income tax $88.00 | Social Security $74.40 | Medicare $17.40 | State income tax $22.80
The 401(k) contribution is pre-tax for federal income tax. What are Gabriel's federal taxable wages for this paycheck?

A. $937.40

B. $1,140.00

C. $1,200.00

D. $1,260.00

GO DEEPER 1 — Pre-tax and after-tax deductions

Question 2 of 5 · Knowledge Check

Pay stub (biweekly): Gross pay $1,200.00 | 401(k) contribution (pre-tax) $60.00 | Federal income tax $88.00 | Social Security $74.40 | Medicare $17.40 | State income tax $22.80

Why are Social Security and Medicare figured on $1,200.00, not on $1,140.00 (gross pay minus the pre-tax 401(k) contribution)?

A. 401(k) deferrals are still subject to FICA

B. The payroll system made an error

C. FICA taxes are figured on net pay

D. Social Security is optional for young workers

GO DEEPER 1 — Pre-tax and after-tax deductions

Question 3 of 5 · Learn and Apply

LEARN

Because pre-tax contributions lower taxable income, they also lower income tax. Contributing $60 pre-tax reduces take-home pay by less than $60.

Gabriel's federal tax rate on his last dollars of income is 12%. If he contributes $60 pre-tax, about how much does his take-home pay drop?

A. $7.20

B. $52.80

C. $60.00

D. $67.20

GO DEEPER 1 — Pre-tax and after-tax deductions

Question 4 of 5 · Learn and Apply

LEARN

After-tax deductions are taken out after income tax is figured. Roth retirement contributions are after-tax: no tax break now, but qualified withdrawals in retirement are tax-free.

A Roth 401(k) contribution is an after-tax deduction. Compared with a traditional (pre-tax) 401(k) contribution of the same amount today, it…

A. lowers today's take-home pay more, but qualified withdrawals later are tax-free

B. lowers today's take-home pay less and is taxed again later

C. has no effect on take-home pay

D. is not allowed for workers under 25

GO DEEPER 1 — Pre-tax and after-tax deductions

Question 5 of 5 · Knowledge Check

Which deduction is usually AFTER-tax?

A. A traditional 401(k) contribution

B. A health insurance premium through a cafeteria plan

C. A health savings account (HSA) payroll contribution

D. Union dues taken from pay

GO DEEPER 2 — Year-to-date totals and checking for errors

Question 1 of 5 · Learn and Apply

LEARN

Year-to-date (YTD) amounts add up everything since January 1. They help you check totals and match your Form W-2 at year end.

Gabriel has received 10 biweekly paychecks of $1,200.00 gross this year. What should his YTD gross pay show?

A. $1,200.00

B. $9,374.00

C. $12,000.00

D. $31,200.00

GO DEEPER 2 — Year-to-date totals and checking for errors

Question 2 of 5 · Knowledge Check · Practical how-to

Gabriel worked 84 hours in a two-week period, including 4 overtime hours in the second week, but his stub shows 84 regular hours and no overtime. What should he do?

A. Ask payroll to correct it, bringing his own record of hours

B. Ignore it; pay stubs cannot contain mistakes

C. Wait for his tax refund to fix it

D. Work fewer hours next week to even it out

GO DEEPER 2 — Year-to-date totals and checking for errors

Question 3 of 5 · Knowledge Check

Gabriel's YTD Social Security is $744.00 on YTD gross of $12,000.00. Is that consistent with a 6.2% rate?

A. No; it should be $7,440

B. No; it should be $174

C. Yes, because any amount under $1,000 is fine

D. Yes; 6.2% of $12,000 is $744

GO DEEPER 2 — Year-to-date totals and checking for errors

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Each January, employers send Form W-2, which reports the year's wages and taxes withheld. Its totals should match your last pay stub of the year (for wages subject to each tax).

Gabriel's final pay stub shows year-to-date federal tax withheld of $2,140, but Box 2 of his W-2 shows $2,410. What should he do?

A. Ask payroll which amount is correct

B. Use whichever number gives a bigger refund

C. Ignore it; the two forms never match

D. Add the two amounts together on his return

GO DEEPER 2 — Year-to-date totals and checking for errors

Question 5 of 5 · Knowledge Check · Practical how-to

Why keep pay stubs until you have checked your W-2?

A. Because banks require them to deposit paychecks

B. Because they can be exchanged for cash

C. Because the IRS requires mailing them in each year

D. To confirm the W-2's wages and withholding are correct

SET 11 · Earning Income, Employment, and Paychecks

Form W-4, withholding, and Form W-2

MAIN skill: Explain how Form W-4 sets withholding and what Form W-2 reports

Outcome FL.INCOME.11 · National topic: Earning Income · NJSLS 9.1.12: EG, PB

Learning target: 12-6a calculate taxes likely withheld; tax forms used by employees

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Why taxes are withheld from pay (5 questions)
  - Why: Understanding withholding as pay-as-you-go tax payment explains what the W-4 and W-2 do.
- B2 · Math link → G5-S22-M (Grade 5 5.NBT.B.7): Solve real-world problems with decimal operations
  - Why: Yearly withholding totals multiply per-paycheck amounts by the number of pay periods.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Getting withholding about right (5 questions)
- Go Deeper 2: Claiming exemption from withholding (5 questions)

Practical skills beyond the standards: Filling out Form W-4; Using the IRS Tax Withholding Estimator

Content status: time-sensitive

Source: IRS (Form W-4) — Employees give Form W-4 to their employer to set federal income tax withholding; claiming exempt requires no tax liability last year and none expected this year. https://www.irs.gov/forms-pubs/about-form-w-4

Source: IRS (Form W-2) — Employers furnish Form W-2 (wages and taxes withheld) to employees by January 31. https://www.irs.gov/forms-pubs/about-form-w-2

MAIN — Explain how Form W-4 sets withholding and what Form W-2 reports

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

Form W-4 (Employee's Withholding Certificate) tells your employer how much federal income tax to withhold from each paycheck. You fill it out when you start a job and can update it any time, such as after a second job begins or your situation changes.

Kayla starts her first job. Her employer asks her to fill out Form W-4. What is it used for?

A. To apply for a Social Security number

B. To report her yearly wages to the IRS

C. To sign up for health insurance

D. To set her federal income tax withholding

MAIN — Explain how Form W-4 sets withholding and what Form W-2 reports

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

You give Form W-4 to your employer, not the IRS. The employer's payroll system uses it to calculate withholding.

Where does Kayla send her completed Form W-4?

A. To her employer

B. To the IRS by mail

C. To her bank

D. To her state's motor vehicle agency

MAIN — Explain how Form W-4 sets withholding and what Form W-2 reports

Question 3 of 5 · Learn and Apply

LEARN

Step 4(c) of Form W-4 lets you request extra withholding each pay period. Multiply by the number of paychecks in a year to see the yearly effect.

On her W-4, Kayla asks for $20 of extra withholding per paycheck. She is paid biweekly. How much extra will be withheld over a full year?

A. $240

B. $480

C. $520

D. $1,040

MAIN — Explain how Form W-4 sets withholding and what Form W-2 reports

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Form W-2 (Wage and Tax Statement) reports a worker's wages for the year and the taxes withheld. Employers must send it by January 31, and employees use it to file their tax returns.

It is February 15, and Ana still has not received last year's Form W-2 from her employer. What is true?

A. It is late; she should contact the employer

B. It is on time; W-2s are due by April 15

C. It is on time; W-2s are due by June 30

D. She should skip filing this year without it

MAIN — Explain how Form W-4 sets withholding and what Form W-2 reports

Question 5 of 5 · Knowledge Check

Which statement about income tax withholding is TRUE?

A. It is an extra tax on top of what is owed

B. It is money the employer keeps

C. It is optional for every employee

D. It prepays the year's tax

BACKWARD B1 · concept review — Why taxes are withheld from pay

Question 1 of 5 · Learn and Apply

LEARN

Federal income tax is collected throughout the year. For employees, the employer withholds part of each paycheck and sends it to the government on the employee's behalf.

The U.S. income tax is "pay-as-you-go." What does this mean for employees?

A. Tax is paid once, only when you retire

B. Only people who ask to pay tax have to pay it

C. Tax is paid only by employers, never employees

D. Tax is paid gradually through paycheck withholding during the year

BACKWARD B1 · concept review — Why taxes are withheld from pay

Question 2 of 5 · Learn and Apply

LEARN

Withholding means the tax is taken out of a paycheck before the worker receives it.

Who sends the withheld tax to the government?

A. The employer

B. The employee mails cash each week

C. The employee's bank

D. Nobody until tax filing day

BACKWARD B1 · concept review — Why taxes are withheld from pay

Question 3 of 5 · Learn and Apply

LEARN

When you file a tax return, you calculate your actual tax for the year and compare it with what was withheld.

If too much tax is withheld during the year, what happens after filing a tax return?

A. The extra is lost

B. The extra is added to next year's salary

C. The employer pays the employee a bonus

D. The extra is returned as a refund

BACKWARD B1 · concept review — Why taxes are withheld from pay

Question 4 of 5 · Knowledge Check

If too little tax is withheld, what happens?

A. The employee owes the rest when filing

B. The government forgives the difference

C. The employer pays the difference

D. Nothing, because withholding is final

BACKWARD B1 · concept review — Why taxes are withheld from pay

Question 5 of 5 · Knowledge Check

Which document tells the employer how much to withhold?

A. Form W-4

B. Form W-2

C. A pay stub

D. Form 1040

GO DEEPER 1 — Getting withholding about right

Question 1 of 5 · Learn and Apply

LEARN

A tax refund is your own overpaid tax coming back. It is not extra income. A large refund means you could have had more in each paycheck during the year.

Last year Kayla received a $1,300 refund. What does that tell her?

A. She earned a $1,300 bonus from the IRS

B. Her employer underpaid her by $1,300

C. She owes $1,300 more next year

D. She had $1,300 more withheld than her tax

GO DEEPER 1 — Getting withholding about right

Question 2 of 5 · Knowledge Check

Kayla's $1,300 tax refund came from tax withheld beyond what she owed. If that amount had stayed in her 26 biweekly paychecks instead, about how much more would each paycheck have been?

A. $25

B. $50

C. $108.33

D. $1,300

GO DEEPER 1 — Getting withholding about right

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

The IRS offers a free online Tax Withholding Estimator. Using recent pay stubs, it suggests how to fill out a new W-4 to get closer to the right amount.

Which free tool helps workers check whether their withholding is about right?

A. The IRS Tax Withholding Estimator

B. A credit score app that tracks her accounts

C. Her W-2 from last year, without any changes

D. A social media poll of coworkers

GO DEEPER 1 — Getting withholding about right

Question 4 of 5 · Learn and Apply

LEARN

When you have more than one job, each employer's payroll may assume its pay is your only income, so total withholding can fall short. Step 2 of Form W-4 addresses multiple jobs.

Kayla starts a second part-time job. Why might her withholding now be too low?

A. Two jobs always get the correct combined withholding automatically

B. Part-time jobs are not taxed

C. Her first employer stops withholding

D. Each employer withholds as if that job were her only income

GO DEEPER 1 — Getting withholding about right

Question 5 of 5 · Knowledge Check

Kayla expects to owe $200 more than will be withheld this year. She has 10 paychecks left. How much extra per paycheck should she request?

A. $2

B. $10

C. $20

D. $200

GO DEEPER 2 — Claiming exemption from withholding

Question 1 of 5 · Learn and Apply

LEARN

You may claim "exempt" on Form W-4 only if you had no federal income tax liability last year and expect none this year. Exemption affects federal income tax withholding only, not Social Security or Medicare.

Under IRS rules, who may claim exemption from federal income tax withholding on Form W-4?

A. Someone who owed no tax last year and expects none this year

B. Anyone under age 21

C. Anyone who works part time while attending high school

D. Anyone who wants a larger paycheck

GO DEEPER 2 — Claiming exemption from withholding

Question 2 of 5 · Knowledge Check

A student claims exempt on Form W-4, so no federal income tax is withheld, but earns enough to owe tax. What is the likely result?

A. No tax is ever owed

B. The employer pays the tax

C. A larger refund when filing next spring

D. A tax bill when filing, and possibly a penalty

GO DEEPER 2 — Claiming exemption from withholding

Question 3 of 5 · Knowledge Check

If a worker claims exempt from federal income tax withholding on Form W-4, which taxes are still withheld?

A. Social Security and Medicare

B. Federal income tax only

C. No taxes at all

D. Only sales tax

GO DEEPER 2 — Claiming exemption from withholding

Question 4 of 5 · Learn and Apply

LEARN

A claim of exemption from withholding expires and must be renewed with a new Form W-4 each year.

How long does a claim of exemption on Form W-4 last?

A. Forever, once claimed

B. Until the worker turns 18

C. Five years

D. One year; a new W-4 is needed to continue it

GO DEEPER 2 — Claiming exemption from withholding

Question 5 of 5 · Knowledge Check

IRS rules allow claiming exempt only with no income tax liability last year and none expected this year. Jamal earned $3,000 last year and owed no federal income tax. This year he expects to earn $28,000 at a full-time job. Should he claim exempt?

A. Yes, because he owed nothing last year

B. Yes, because he is a new worker

C. Yes, so that he can get a bigger refund next spring

D. No; he expects to owe income tax this year

SET 12 · Earning Income, Employment, and Paychecks

Employee benefits and comparing job offers

MAIN skill: Value employee benefits and compare job offers by total compensation

Outcome FL.INCOME.12 · National topic: Earning Income · NJSLS 9.1.12: PB

Learning target: 12-1a research potential income and employee benefit packages likely to be offered to new employees

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Compensation: pay plus benefits (5 questions)
  Why: Comparing offers requires seeing benefits as part of what a job pays.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Employer match and contribution rates are percents of salary.

- Go Deeper 2: The hidden costs of a job (5 questions)

Practical skills beyond the standards: Comparing job offers with benefits; Counting job-related costs

Content status: stable

MAIN — Value employee benefits and compare job offers by total compensation

Question 1 of 5 · Learn and Apply

LEARN

Total compensation is everything an employer provides for your work: wages or salary plus benefits. Common benefits include health insurance (the employer often pays part of the cost), retirement plans with matching contributions, paid time off, and sometimes tuition help or transit passes.

Which item is an employee BENEFIT rather than wages?

A. Employer-paid health insurance

B. Overtime pay at time and a half

C. A commission on each sale the worker makes

D. Hourly pay for a Saturday shift

MAIN — Value employee benefits and compare job offers by total compensation

Question 2 of 5 · Learn and Apply

LEARN

Many employers match retirement contributions, for example "50% of what you contribute, up to 6% of pay." The match is extra money for your retirement, but you only receive it if you contribute.

Zoe earns $50,000. Her employer matches 50% of her 401(k) contributions, up to 6% of salary. Zoe contributes 6% ($3,000). How much does the employer add?

A. $300

B. $1,500

C. $3,000

D. $4,500

MAIN — Value employee benefits and compare job offers by total compensation

Question 3 of 5 · Knowledge Check

Zoe's coworker earns $50,000 under the same match (50% of contributions, up to 6% of salary) but contributes only 2% ($1,000). How much potential match does the coworker give up each year?

A. $500

B. $1,000

C. $1,500

D. $2,000

MAIN — Value employee benefits and compare job offers by total compensation

Question 4 of 5 · Learn and Apply

LEARN

To compare offers fairly, subtract the costs you would pay (such as your share of health premiums) and add the value of benefits you would receive (such as a retirement match).

Offer A: $48,000 salary; the employee pays $100 per month for health insurance. Offer B: $50,000; the employee pays $250 per month for the same coverage. After subtracting health premiums, which pays more per year, and by how much?

A. Offer B, by $2,000

B. Offer A, by $1,800

C. Offer A, by $200

D. Offer B, by $200

MAIN — Value employee benefits and compare job offers by total compensation

Question 5 of 5 · Knowledge Check

A job gives 10 paid vacation days. Lin earns $200 per day. What is the dollar value of that paid time off?

A. $2,000

B. $200

C. $20

D. $0, since she is not working

BACKWARD B1 · concept review — Compensation: pay plus benefits

Question 1 of 5 · Learn and Apply

LEARN

Compensation is everything you receive for work. Wages are the pay; benefits are the extras, such as health insurance, retirement contributions, and paid time off, which have real dollar value.

What does "total compensation" include?

A. Only the hourly wage or salary

B. Only the take-home pay after taxes

C. Only bonuses earned at year end

D. Pay plus the value of benefits

BACKWARD B1 · concept review — Compensation: pay plus benefits

Question 2 of 5 · Learn and Apply

LEARN

Paid time off means days you are paid for even though you do not work, such as vacation, sick days, or holidays.

Which choice is paid time off (PTO)?

A. Paid vacation days

B. Unpaid leave

C. Overtime hours

D. A lunch break you are not paid for

BACKWARD B1 · concept review — Compensation: pay plus benefits

Question 3 of 5 · Knowledge Check

An employer pays $400 per month toward an employee's health insurance. What is that worth per year?

A. $33.33

B. $400

C. $1,600

D. $4,800

BACKWARD B1 · concept review — Compensation: pay plus benefits

Question 4 of 5 · Learn and Apply

LEARN

A 401(k) is a retirement savings plan offered by many private employers. Workers contribute part of each paycheck, often with tax benefits, and some employers add a match. (Public schools and many nonprofits offer a similar 403(b).)

What is a 401(k)?

A. A type of bank checking account for paying monthly bills

B. A government health insurance program

C. A form used to apply for a job

D. A retirement savings plan offered through an employer

BACKWARD B1 · concept review — Compensation: pay plus benefits

Question 5 of 5 · Knowledge Check

Two jobs pay the same salary. Job X offers health insurance; Job Y does not, so the worker must buy coverage for $300 a month. How much more does Job Y effectively cost the worker per year?

A. $0

B. $25

C. $300

D. $3,600

GO DEEPER 1 — Valuing a full benefits package

Question 1 of 5 · Learn and Apply

LEARN

A fair comparison adds the value of benefits you will actually use and subtracts costs you will actually pay. A match counts only if you contribute enough to earn it.

Offer C: $52,000 salary, no retirement match, employee health premium $150 per month.
Offer D: $50,000 salary, 401(k) match worth $2,000 per year if you contribute, employee health premium $100 per month.
If you contribute enough to get the full match, which offer is worth more per year, and by how much?

A. Offer D, by $600

B. Offer C, by $2,000

C. Offer C, by $1,400

D. Offer D, by $2,600

GO DEEPER 1 — Valuing a full benefits package

Question 2 of 5 · Learn and Apply

LEARN

Vesting is ownership over time. Your own 401(k) contributions are always yours. An employer's contributions may vest gradually, and if you leave before you are fully vested, you can lose the unvested part.

A 401(k) match "vests" over 3 years. Ali leaves after 1 year. What does vesting mean for him?

A. He may forfeit the unvested part of the employer's match

B. He loses his own contributions as well as the match

C. He keeps everything because matches always vest at once

D. He must repay his salary

GO DEEPER 1 — Valuing a full benefits package

Question 3 of 5 · Knowledge Check

Under a plan where the match vests 20% per year of service, how much of a $1,500 match has Ali earned after 1 year?

A. $0

B. $300

C. $1,200

D. $1,500

GO DEEPER 1 — Valuing a full benefits package

Question 4 of 5 · Knowledge Check

Which benefit is easiest to overlook when comparing jobs?

A. The posted salary

B. The job title

C. The company logo

D. A tuition assistance program

GO DEEPER 1 — Valuing a full benefits package

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Researching typical income and benefits before choosing a career or job helps you negotiate and plan. The Bureau of Labor Statistics publishes pay data and job outlooks by occupation; job postings show current offers.

Which source is MOST reliable for typical pay and benefits in an occupation?

A. Government labor data and job postings

B. A single viral social media post about a high salary

C. A friend's guess

D. An advertisement for a training course

GO DEEPER 2 — The hidden costs of a job

Question 1 of 5 · Learn and Apply

LEARN

A job's real value can depend on costs it creates: commuting (fuel, parking, transit), uniforms, tools, or child care. Subtracting them gives a clearer comparison.

Job E pays $20 per hour, 40 hours a week. The commute costs $12 per day for 5 days. What is the weekly pay after commuting costs?

A. $60

B. $740

C. $788

D. $800

GO DEEPER 2 — The hidden costs of a job

Question 2 of 5 · Knowledge Check

Job E pays $740 a week after $60 of commuting costs, for 40 hours of work. The commute also takes 1 unpaid hour each day, 5 days a week. Counting commute time, what are the weekly earnings after commuting costs per hour of time spent (work + commute)?

A. $16.44

B. $17.78

C. $18.50

D. $20.00

GO DEEPER 2 — The hidden costs of a job

Question 3 of 5 · Knowledge Check

Job E pays $20 per hour, but commuting costs $12 a day for 5 days. Job F pays $19 per hour, fully remote, with no commuting costs. Which earns more per week for 40 hours of work, after commuting costs?

A. Job E, by $40

B. Job E, by $20

C. Neither; they are equal

D. Job F, by $20

GO DEEPER 2 — The hidden costs of a job

Question 4 of 5 · Knowledge Check

Which cost should be subtracted when comparing two jobs?

A. Required uniforms the worker must buy

B. Groceries the worker would buy anyway

C. Rent the worker pays either way

D. A phone bill the worker pays either way

GO DEEPER 2 — The hidden costs of a job

Question 5 of 5 · Knowledge Check

A parent compares a $22 per hour job requiring $160 per week of child care with an $18 per hour job with a work-site child care benefit (no cost). For 40 hours, which leaves more per week after child care, and by how much?

A. The $22 job, by $160

B. The $18 job, by $160

C. The $22 job, by $40

D. Neither; both leave $720

SET 13 · Earning Income, Employment, and Paychecks

Gig work and independent contractors

MAIN skill: Compare employee and independent contractor work and estimate gig income after expenses and taxes

Outcome FL.INCOME.13 · National topic: Earning Income · NJSLS 9.1.12: EG, PB

Learning target: 12-11a benefits and costs of gig employment; 12-8a earned income

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Employee or independent contractor? (5 questions)
  Why: Gig tax and income questions depend on knowing how contractors differ from employees.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Self-employment tax and set-aside amounts are percents of earnings.
- B3 · Math link → G7-S65-M (Grade 7 7.RP.A.3): Find a percent fee and the total with the fee
  Why: Gig platforms deduct percent-based fees from earnings.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: True hourly earnings after expenses (5 questions)
- Go Deeper 2: Records and taxes for gig workers (5 questions)

Practical skills beyond the standards: Mileage logs; Setting aside tax money

Content status: time-sensitive

Source: IRS (Self-Employment Tax, Topic 554) — Self-employment tax is 15.3% (12.4% Social Security + 2.9% Medicare) on 92.35% of net earnings; a return is required when net self-employment earnings are $400 or more. https://www.irs.gov/businesses/small-businesses-self-employed/self-employment-tax-social-security-and-medicare-taxes

Source: IRS (Gig Economy Tax Center) — Gig income is taxable whether or not the worker receives a Form 1099. https://www.irs.gov/businesses/gig-economy-tax-center

MAIN — Compare employee and independent contractor work and estimate gig income after expenses and taxes

Question 1 of 5 · Learn and Apply

LEARN

An independent contractor works for himself or herself, not as an employee. Payers usually do not withhold taxes, overtime laws generally do not apply, and there are usually no employer benefits. Contractors may receive a Form 1099-NEC (or a 1099-K from a payment platform) instead of a W-2.

Ravi drives for a delivery app as an independent contractor. Which statement is TRUE for him but NOT for a typical employee?

A. No taxes are withheld from his pay; he must pay them himself

B. He is guaranteed overtime pay after 40 hours

C. His employer pays half of his Social Security tax

D. He receives a Form W-2 each January

MAIN — Compare employee and independent contractor work and estimate gig income after expenses and taxes

Question 2 of 5 · Learn and Apply

LEARN

For self-employed work, net earnings (profit) = income − business expenses. Taxes are figured on net earnings, so tracking expenses matters.

Ravi earned $900 in delivery fees this month and spent $180 on gas and other business expenses. What were his net earnings?

A. $180

B. $720

C. $900

D. $1,080

MAIN — Compare employee and independent contractor work and estimate gig income after expenses and taxes

Question 3 of 5 · Learn and Apply

LEARN

Self-employment tax is the self-employed person's Social Security and Medicare tax. Because there is no employer to pay half, the rate is 15.3% (12.4% + 2.9%), figured on 92.35% of net earnings. It applies in addition to income tax.

Self-employment tax is 15.3% of 92.35% of net earnings. Estimate Ravi's self-employment tax on $720 of net earnings (to the nearest cent).

A. $50.87

B. $101.73

C. $110.16

D. $137.70

MAIN — Compare employee and independent contractor work and estimate gig income after expenses and taxes

Question 4 of 5 · Learn and Apply

LEARN

Federal income tax applies to income from all sources unless a specific rule excludes it. Forms such as the 1099 report income to the IRS, but they do not decide whether income is taxable.

Ravi receives no Form 1099 from one small client who paid him $350. Is the $350 taxable?

A. No; income without a form is tax-free

B. Only if the client reports it first

C. Only if the total from that client is over $10,000

D. Yes; income is taxable even without a form

MAIN — Compare employee and independent contractor work and estimate gig income after expenses and taxes

Question 5 of 5 · Knowledge Check

Which is a benefit of gig work compared with a typical job, and which is a cost?

A. Benefit: guaranteed minimum hours. Cost: fixed schedule

B. Benefit: employer health insurance. Cost: overtime pay

C. Benefit: no taxes owed. Cost: lower pay

D. Benefit: flexibility. Cost: no benefits or withholding

BACKWARD B1 · concept review — Employee or independent contractor?

Question 1 of 5 · Learn and Apply

LEARN

Employees usually work under an employer's control (schedule, methods) and get a W-2. Independent contractors run their own work, often for several clients, and are paid per job.

Which worker is MOST likely an independent contractor?

A. A freelance designer who bills several clients

B. A cashier scheduled by a store manager each week

C. A teacher paid a salary by a school district

D. A warehouse worker paid hourly with a W-2

BACKWARD B1 · concept review — Employee or independent contractor?

Question 2 of 5 · Learn and Apply

LEARN

Businesses that pay a contractor may report the payments on Form 1099-NEC. Payment apps and platforms may send Form 1099-K.

Which form might a contractor receive instead of a W-2?

A. Form 1099-NEC

B. Form W-4

C. Form I-9

D. Form 1040-ES

BACKWARD B1 · concept review — Employee or independent contractor?

Question 3 of 5 · Learn and Apply

LEARN

Employers withhold income tax from employees' paychecks. Clients generally pay independent contractors the full amount billed.

Who withholds income tax from an independent contractor's pay?

A. The client, just as an employer would for a worker

B. The bank where the money is deposited

C. The IRS automatically

D. Usually no one; the contractor pays it

BACKWARD B1 · concept review — Employee or independent contractor?

Question 4 of 5 · Learn and Apply

LEARN

Profit (net earnings) = income − expenses.

A contractor earns $1,000 and has $250 of business expenses. What is her profit?

A. $250

B. $750

C. $1,000

D. $1,250

BACKWARD B1 · concept review — Employee or independent contractor?

Question 5 of 5 · Knowledge Check

Which benefit do contractors usually NOT receive from a client?

A. Employer-paid health insurance

B. Payment for completed work

C. The ability to choose clients

D. Control over how they do the work

GO DEEPER 1 — True hourly earnings after expenses

Question 1 of 5 · Learn and Apply

LEARN

Gig apps show gross pay per trip. Your real hourly earnings subtract the costs of doing the work, such as fuel, vehicle wear, phone data, and insurance, then divide by all hours worked, including waiting time.

Mia drove 30 hours and earned $750 in app payments. She drove 400 miles, and her costs (gas, wear, insurance) are about $0.30 per mile. What were her earnings per hour after these costs?

A. $4

B. $18.75

C. $21

D. $25

GO DEEPER 1 — True hourly earnings after expenses

Question 2 of 5 · Knowledge Check

A platform takes a 25% service fee from each $40 job. How much does the worker receive per job?

A. $10

B. $30

C. $39.75

D. $50

GO DEEPER 1 — True hourly earnings after expenses

Question 3 of 5 · Knowledge Check

Mia earns $630 a week after driving costs for 30 hours of driving, and she also waits 10 unpaid hours a week for orders. What is her net pay per hour of total time?

A. $15.75

B. $18.75

C. $21.00

D. $63.00

GO DEEPER 1 — True hourly earnings after expenses

Question 4 of 5 · Knowledge Check

Mia earns $630 a week after driving costs and sets aside 25% of it for taxes. How much does she keep for the week?

A. $157.50

B. $472.50

C. $562.50

D. $630.00

GO DEEPER 1 — True hourly earnings after expenses

Question 5 of 5 · Knowledge Check

Which comparison is fair when deciding between gig driving and a $17 per hour employee job?

A. Gig gross per trip vs the job's hourly wage

B. The busiest gig hour vs the job's average hour

C. Gig tips only vs the job's full pay

D. Gig net per hour after costs and taxes vs the job's pay after taxes

GO DEEPER 2 — Records and taxes for gig workers

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

Self-employed workers can deduct ordinary and necessary business expenses, such as business miles driven. The IRS expects records that support each deduction: logs, receipts, and statements.

Which record is MOST useful for a delivery driver at tax time?

A. A mileage log with dates, miles, and business purpose

B. Screenshots of favorite customers' reviews

C. A list of restaurants visited for personal meals

D. The app's advertising emails

GO DEEPER 2 — Records and taxes for gig workers

Question 2 of 5 · Learn and Apply

LEARN

Self-employment tax (Social Security and Medicare for self-employed people) applies once net self-employment earnings reach a small threshold set by law, even if no income tax is owed.

Self-employed people generally must file a federal return if net self-employment earnings reach what amount?

A. $400

B. $4,000

C. $10,000

D. $1,000,000

GO DEEPER 2 — Records and taxes for gig workers

Question 3 of 5 · Learn and Apply

LEARN

Taxes are pay-as-you-go. People without withholding usually make quarterly estimated tax payments (Form 1040-ES) if they expect to owe $1,000 or more. Paying too little during the year can bring a penalty.

A gig worker expects to owe $2,000 in tax for the year and pays nothing until April. What risk does this create?

A. No risk; all taxes are due in April

B. The IRS cancels taxes under $5,000

C. Her tax refund will be larger than usual

D. An underpayment penalty, plus one large bill

GO DEEPER 2 — Records and taxes for gig workers

Question 4 of 5 · Knowledge Check · Practical how-to

Mia sets aside 25% of each week's $630 net in a separate savings account. How much is set aside over a 13-week quarter?

A. $157.50

B. $630.00

C. $2,047.50

D. $8,190.00

GO DEEPER 2 — Records and taxes for gig workers

Question 5 of 5 · Knowledge Check · Practical how-to

Why keep gig tax money in a separate account?

A. So it is not spent before taxes are due

B. Because the IRS requires a separate account by law

C. Because separate accounts earn no interest

D. Because keeping it separate lowers the tax owed

SET 14 · Earning Income, Employment, and Paychecks

Education, careers, and lifetime income

MAIN skill: Evaluate how education, skills, and the labor market affect lifetime income

Outcome FL.INCOME.14 · National topic: Earning Income · NJSLS 9.1.12: PB, FP

Learning target: 12-5a how labor market conditions affect income; 12-5b how technology affects employment and income

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Opportunity cost and trade-offs (5 questions)
  - Why: Comparing career and education choices depends on recognizing what is given up.
- B2 · Math link → G8-S22-M (Grade 8 8.EE.C.8.c): Write and solve systems of linear equations for real-world problems
  - Why: Finding when a higher-paying path catches up uses two linear expressions for total earnings.
- B3 · Math link → G6-S19-M (Grade 6 6.NS.B.3): Multiply multi-digit decimals
  - Why: Multi-year earnings multiply yearly pay by years.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: When does more education pay off? (5 questions)
- Go Deeper 2: Paths to a career (5 questions)

Practical skills beyond the standards: Break-even analysis for education; Evaluating training programs

Content status: time-sensitive

Source: U.S. Bureau of Labor Statistics (Employment Projections) — Median weekly earnings rise and unemployment rates fall with higher educational attainment (figures update yearly).
https://www.bls.gov/emp/chart-unemployment-earnings-education.htm

MAIN — Evaluate how education, skills, and the labor market affect lifetime income

Question 1 of 5 · Learn and Apply

LEARN

Human capital is the knowledge, skills, and experience that make a person productive and able to earn income. Education, training, apprenticeships, and work experience build human capital, often raising future earnings.

Which is an example of investing in your "human capital"?

A. Buying a new phone

B. Opening a savings account

C. Leasing a car

D. Completing an electrician apprenticeship

MAIN — Evaluate how education, skills, and the labor market affect lifetime income

Question 2 of 5 · Learn and Apply

LEARN

Opportunity cost is the value of the next-best choice you give up. The cost of school includes tuition and also the income you could have earned while studying.

Pat can work now at $32,000 per year, or attend a 4-year program first. What is the opportunity cost in earnings of the 4 years in school (ignoring raises)?

A. $0

B. $32,000

C. $96,000

D. $128,000

MAIN — Evaluate how education, skills, and the labor market affect lifetime income

Question 3 of 5 · Learn and Apply

LEARN

Comparing career paths over many years shows the trade-off: a later start can be outweighed by higher yearly earnings, depending on the numbers and costs.

Path A: start work at 18 earning $32,000 a year. Path B: start at 22 earning $52,000 a year. Ignoring raises and costs, which path has earned more by age 40, and by how much?

A. Path B, by $232,000

B. Path A, by $232,000

C. Path B, by $20,000

D. Path B, by $360,000

MAIN — Evaluate how education, skills, and the labor market affect lifetime income

Question 4 of 5 · Learn and Apply

LEARN

Wages are influenced by supply and demand in the labor market. When employers need more workers with a skill than are available, wages for that skill tend to rise. When many people have a skill employers need less, wages tend to fall.

Demand for wind turbine technicians rises sharply, but few people have the training. What usually happens to their wages?

A. Wages tend to fall

B. Wages stay fixed by law

C. Wages drop to minimum wage

D. Wages tend to rise

MAIN — Evaluate how education, skills, and the labor market affect lifetime income

Question 5 of 5 · Knowledge Check

Software that automates routine bookkeeping becomes common. Which outcome is MOST likely?

A. All accounting jobs disappear within a single year

B. No effect on jobs, because technology never changes work

C. Higher pay for every routine data-entry job

D. Fewer routine jobs, more need for analysis skills

BACKWARD B1 · concept review — Opportunity cost and trade-offs

Question 1 of 5 · Learn and Apply

LEARN

Every choice has an opportunity cost: the value of the next-best option you give up. A "free" activity can still cost the money or time you could have used otherwise.

Lia can work a Saturday shift for $120 or go to a free concert. If she goes to the concert, what is the opportunity cost?

A. The $120 she would have earned

B. $0, because the concert is free

C. The price of a ticket she did not buy

D. The concert itself

BACKWARD B1 · concept review — Opportunity cost and trade-offs

Question 2 of 5 · Knowledge Check

Which is the opportunity cost of spending $50 on a video game?

A. What else the $50 could have done

B. The time it takes to drive to the store

C. The sales tax on the game

D. Nothing, because games are fun

BACKWARD B1 · concept review — Opportunity cost and trade-offs

Question 3 of 5 · Learn and Apply

LEARN

Specialized skills take time and money to gain, so fewer people have them. When employers need those skills, they compete for workers by offering higher pay.

Why do many careers that require more training pay more?

A. The law requires higher pay for degrees

B. Training programs set the wages their graduates earn

C. Higher pay is random

D. The skills are scarce and valued

BACKWARD B1 · concept review — Opportunity cost and trade-offs

Question 4 of 5 · Knowledge Check

Earning $15 per hour for 2 hours vs studying for 2 hours: what is the cost of studying, in income?

A. $0

B. $15

C. $17

D. $30

BACKWARD B1 · concept review — Opportunity cost and trade-offs

Question 5 of 5 · Knowledge Check

Which choice is MOST likely to raise long-term earning power?

A. Buying a more expensive car

B. Switching to a new phone plan

C. Taking a weekend trip

D. Earning an industry certification in a growing field

GO DEEPER 1 — When does more education pay off?

Question 1 of 5 · Learn and Apply

LEARN

A "break-even point" is when two options have produced the same total. Write each option's total as an expression in t (years), set them equal, and solve.

Path A earns $32,000 a year starting now. Path B costs $40,000 for a 4-year program, then earns $52,000 a year. Let t = years from now (t ≥ 4). Which equation finds when their total earnings (B net of the program cost) are equal?

A. $32{,}000t = 52{,}000(t - 4) - 40{,}000$

B. $32{,}000t = 52{,}000t - 40{,}000$

C. $32{,}000(t - 4) = 52{,}000t - 40{,}000$

D. $32{,}000t + 40{,}000 = 52{,}000t$

GO DEEPER 1 — When does more education pay off?

Question 2 of 5 · Knowledge Check

Solve 32,000t = 52,000(t − 4) − 40,000. After how many years from now do the paths break even?

A. 12.4 years

B. 4 years

C. 2 years

D. 10.4 years

GO DEEPER 1 — When does more education pay off?

Question 3 of 5 · Knowledge Check

Path B requires a $40,000 program before its higher pay begins. If the program were paid with student loans that charge interest, how would Path B's break-even point change?

A. It would come sooner

B. It would not change

C. Path B would never cost anything

D. It would come later

GO DEEPER 1 — When does more education pay off?

Question 4 of 5 · Knowledge Check

Path B (a 4-year, $40,000 program, then higher pay) is compared with working now at lower pay (Path A). Which factor would make Path B pay off SOONER?

A. A more expensive program

B. Taking 6 years instead of 4 to finish the program

C. Lower demand for Path B's field

D. Higher starting pay for Path B's career

GO DEEPER 1 — When does more education pay off?

Question 5 of 5 · Knowledge Check

Earnings estimates are uncertain. What is a sensible way to use them?

A. Compare paths with low, middle, and high estimates

B. Use only the highest salary estimate you can find online

C. Ignore estimates because they are uncertain

D. Assume every graduate earns the same

GO DEEPER 2 — Paths to a career

Question 1 of 5 · Learn and Apply

LEARN

Registered apprenticeships combine paid on-the-job training with classroom learning, often leading to a nationally recognized credential. Pay usually rises as skills increase.

Which path lets a person earn wages while training for a skilled trade?

A. A full-time unpaid internship

B. A four-year degree with no job

C. A gap year of travel

D. A registered apprenticeship

GO DEEPER 2 — Paths to a career

Question 2 of 5 · Knowledge Check

An apprentice starts at 50% of a journeyworker's $36 hourly wage and rises to 80% in the last year. What is the last-year hourly wage?

A. $7.20

B. $18.00

C. $28.80

D. $36.00

GO DEEPER 2 — Paths to a career

Question 3 of 5 · Knowledge Check · Practical how-to

Which question is MOST useful before enrolling in a paid career-training program?

A. What share of graduates get jobs in the field, and at what pay?

B. How attractive is the program's website?

C. How modern does the school's building look?

D. Does the program have a catchy slogan?

GO DEEPER 2 — Paths to a career

Question 4 of 5 · Knowledge Check

Military service, community college, and certifications are all ways to build skills. What do they have in common financially?

A. Each trades time (and sometimes money) now for higher future earning power

B. Each is always completely free for every student

C. Each guarantees a high salary right after finishing

D. Each requires a student loan

GO DEEPER 2 — Paths to a career

Question 5 of 5 · Knowledge Check

Data show workers with more education tend to have lower unemployment rates. How should a student use this fact?

A. As proof that any degree guarantees a job in any field

B. As a reason to ignore program costs

C. As a reason to avoid all training

D. As one input among costs, interests, and demand

SET 15 · Budgeting and Managing Expenses

Needs, wants, and types of expenses

MAIN skill: Classify expenses as needs or wants and as fixed, variable, or periodic

Outcome FL.BUDGET.15 · National topic: Spending · NJSLS 9.1.12: PB, FP

Learning target: Develop a budget: needs and wants, fixed and variable expenses

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Income and expenses (5 questions)
  Why: Classifying expenses requires knowing what income and expenses are.
- B2 · Math link → G6-S16-M (Grade 6 6.NS.B.3): Add multi-digit decimals
  Why: Budget totals add many expenses.
- B3 · Math link → G6-S17-M (Grade 6 6.NS.B.3): Subtract multi-digit decimals
  Why: Money left subtracts total expenses from income.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Tracking spending by category (5 questions)
- Go Deeper 2: Values, goals, and gray areas (5 questions)

Practical skills beyond the standards: Tracking a month of spending

Content status: stable

MAIN — Classify expenses as needs or wants and as fixed, variable, or periodic

Question 1 of 5 · Learn and Apply

LEARN

A need is something required to live and work: basic food, housing, utilities, transportation to work, and necessary medical care. A want is something that makes life more enjoyable but is not essential. Many items have a need part and a want part: you need food, but restaurant meals are mostly a want.

Ella is building her first budget. Which expense is a NEED for most people living on their own?

A. A premium streaming subscription with no ads

B. Concert tickets with friends next month

C. A newer phone model to replace a working one

D. Groceries for basic meals

MAIN — Classify expenses as needs or wants and as fixed, variable, or periodic

Question 2 of 5 · Learn and Apply

LEARN

Fixed expenses stay the same each month, such as rent under a lease or a car payment. Variable expenses change from month to month, such as groceries, gas, and utilities. Periodic expenses happen less often than monthly, such as car registration or yearly fees.

Which expense is FIXED (the same amount each month)?

A. Rent of $950 under a one-year lease

B. Groceries, which change with what you buy each week

C. Electricity, which changes with the weather and usage

D. Gasoline, which depends on how much you drive and the price

MAIN — Classify expenses as needs or wants and as fixed, variable, or periodic

Question 3 of 5 · Learn and Apply

LEARN

A budget compares income with expenses. Add all expenses, then subtract the total from income. A positive result is a surplus; a negative result is a deficit.

Omar's monthly take-home pay is $2,150. His expenses: rent $875, food $340, transportation $210, phone $55, utilities $120, and entertainment $150. How much is left?

A. $400

B. $550

C. $1,750

D. $3,900

MAIN — Classify expenses as needs or wants and as fixed, variable, or periodic
Question 4 of 5 · Knowledge Check

Omar's phone plan costs $55: $35 is the basic plan and $20 is for unlimited premium data he rarely uses. How should he think about this expense?

A. About $35 is a need and $20 is a want

B. The whole $55 is a need because phones are essential

C. The whole $55 is a want because phones are optional

D. It is neither a need nor a want, because it is a contract

MAIN — Classify expenses as needs or wants and as fixed, variable, or periodic

Question 5 of 5 · Knowledge Check

Which of these is a PERIODIC expense?

A. A $950 rent payment due on the first of every month

B. A $60 grocery trip each week of the month

C. A $55 phone bill that is the same every month

D. A $180 car registration paid once a year

BACKWARD B1 · concept review — Income and expenses

Question 1 of 5 · Learn and Apply

LEARN

Income is money you receive, such as pay, tips, or gifts. An expense is money you spend or pay out.

Which is INCOME?

A. Pay from a part-time job

B. A payment for a phone bill

C. Money spent on a movie ticket

D. A bank fee

BACKWARD B1 · concept review — Income and expenses
Question 2 of 5 · Knowledge Check

Which is an EXPENSE?

A. A paycheck deposit
B. A birthday gift of cash
C. Interest earned on savings
D. A monthly bus pass

BACKWARD B1 · concept review — Income and expenses

Question 3 of 5 · Learn and Apply

LEARN

Money left = income − expenses.

Income is $500 and expenses are $420. What is left?

A. $80

B. $420

C. $500

D. $920

BACKWARD B1 · concept review — Income and expenses

Question 4 of 5 · Learn and Apply

LEARN

When expenses are larger than income, the difference is a shortfall (deficit). It has to be covered by savings, borrowing, or spending less.

Income is $500 and expenses are $560. What is the result?

A. $60 left over to save

B. $1,060 left over

C. Nothing, because they cancel out

D. A $60 shortfall

BACKWARD B1 · concept review — Income and expenses

Question 5 of 5 · Knowledge Check

Why track expenses for a month before making a budget?

A. To see where money actually goes

B. Because banks require a month of records first

C. Because tracking lowers prices at stores

D. Because expenses are taxed only when tracked

GO DEEPER 1 — Tracking spending by category

Question 1 of 5 · Learn and Apply

LEARN

Tracking spending by category shows where money goes. Comparing a part to its category total, as a percent, helps you decide what to change.

Lena tracked one month of spending: food $410, of which $180 was restaurants and delivery. What percent of her food spending was restaurants and delivery (nearest whole percent)?

A. 18%

B. 44%

C. 56%

D. 228%

GO DEEPER 1 — Tracking spending by category

Question 2 of 5 · Knowledge Check

Lena cuts restaurants and delivery from $180 to $100 a month. How much does she free up in a year?

A. $80

B. $960

C. $1,200

D. $2,160

GO DEEPER 1 — Tracking spending by category

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Small purchases are easy to forget. Apps, bank downloads, receipts, or a notebook all work, as long as every purchase, including cash, is recorded.

Which tracking method is MOST likely to give a complete picture?

A. Recording every purchase, including cash, for a month

B. Guessing totals at the end of the month

C. Reviewing only the largest purchases you remember

D. Tracking only debit card purchases, not any cash ones

GO DEEPER 1 — Tracking spending by category

Question 4 of 5 · Knowledge Check

A $6 coffee five days a week costs how much in a year (52 weeks)?

A. $30

B. $130

C. $312

D. $1,560

GO DEEPER 1 — Tracking spending by category

Question 5 of 5 · Knowledge Check · Practical how-to

After tracking, Lena finds she spends $90 a month on subscriptions she rarely uses. What is the best next step?

A. Keep them all, since each one costs under $15

B. Add one more so she has more choices

C. Stop tracking, since the amounts are small

D. Cancel or pause the ones she rarely uses

GO DEEPER 2 — Values, goals, and gray areas

Question 1 of 5 · Learn and Apply

LEARN

Needs and wants depend partly on a person's situation and values. Labeling honestly helps you decide what to protect and what to cut when money is tight.

Two students each spend $60 a month on the gym. For Kim it supports a doctor-recommended exercise plan; for Lee it is rarely used. Which statement is fair?

A. The gym is always a want for everyone, whatever the reason

B. The gym is always a need for everyone

C. Expenses cannot be classified at all

D. The same expense can be closer to a need for Kim

GO DEEPER 2 — Values, goals, and gray areas

Question 2 of 5 · Knowledge Check

Which budget choice best matches the value "being debt-free"?

A. Paying extra on a credit card balance
B. Buying the newest phone on a payment plan
C. Using buy now, pay later for clothes
D. Taking a cash advance for a trip

GO DEEPER 2 — Values, goals, and gray areas

Question 3 of 5 · Knowledge Check

Spending to keep up with friends is called social pressure. Which response protects a budget?

A. Suggesting a lower-cost activity together

B. Using a credit card so no one notices

C. Skipping a bill to afford the outing

D. Spending the same, then cutting groceries

GO DEEPER 2 — Values, goals, and gray areas

Question 4 of 5 · Knowledge Check

A "want" can be planned for. Which approach does that?

A. Buying it now on a store credit card and paying it off slowly

B. Never buying any wants

C. Waiting for a refund to pay for it

D. Saving $25 a month toward a $300 concert trip

GO DEEPER 2 — Values, goals, and gray areas

Question 5 of 5 · Knowledge Check

Which statement about wants is MOST accurate?

A. A healthy budget never includes any wants

B. Wants should be paid for with credit

C. Wants matter more than bills

D. Planned wants fit a healthy budget

SET 16 · Budgeting and Managing Expenses

Building a monthly budget

MAIN skill: Build a balanced monthly budget from net income and adjust it

Outcome FL.BUDGET.16 · National topic: Spending · NJSLS 9.1.12: PB

Learning target: Develop a budget to allocate current income to needs, wants, and saving

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Start a budget with net income (5 questions)
  - Why: Budgets fail when they start from gross pay; students must use take-home pay.
- B2 · Math link → G6-S17-M (Grade 6 6.NS.B.3): Subtract multi-digit decimals
  - Why: Budget results subtract planned spending from income.
- B3 · Math link → G7-S15-M (Grade 7 7.NS.A.1.b): Interpret sums of rational numbers in real-world situations
  - Why: A deficit is a negative result that must be understood and fixed.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Pay yourself first (5 questions)
- Go Deeper 2: Budgeting methods (5 questions)

Practical skills beyond the standards: Zero-based and envelope budgets; Automating savings

Content status: stable

MAIN — Build a balanced monthly budget from net income and adjust it

Question 1 of 5 · Learn and Apply

LEARN

A budget is a plan for your money: it lists expected income and assigns it to expenses, savings, and goals for a period, usually a month. A budget is "balanced" when planned spending and saving equal income.

What is a budget?

A. A plan for how income will be used

B. A list of the bills you already paid last year

C. A type of savings account with a fixed rate

D. A bank's limit on how much you may spend

MAIN — Build a balanced monthly budget from net income and adjust it

Question 2 of 5 · Learn and Apply

LEARN

Budget result = income − planned expenses. Positive: surplus (money left to save or use). Negative: deficit (planned spending is more than income), which must be fixed by earning more or spending less.

Nia's monthly take-home pay is $1,980. Her planned expenses total $2,115. What does her budget show?

A. A $135 surplus

B. A $4,095 surplus

C. A balanced budget

D. A $135 deficit

MAIN — Build a balanced monthly budget from net income and adjust it

Question 3 of 5 · Learn and Apply

LEARN

A zero-based budget gives every dollar a job: expenses, savings, debt payments, or goals. Money is not "left over"; any unassigned money gets a purpose.

In a zero-based budget, income minus all planned spending and saving equals zero. Ty earns $2,400. He plans $1,850 for expenses and $300 for savings. How much is left to assign?

A. $0

B. $250

C. $550

D. $2,150

MAIN — Build a balanced monthly budget from net income and adjust it

Question 4 of 5 · Knowledge Check · Practical how-to

Nia must close a $135 monthly deficit. Which change is MOST realistic and keeps her needs covered?

A. Cut takeout by $80 and pause a $55 subscription

B. Stop paying her electric bill for a month

C. Use a credit card to cover the $135 gap every month

D. Skip her car insurance payment

MAIN — Build a balanced monthly budget from net income and adjust it

Question 5 of 5 · Knowledge Check

Abby is paid $1,150 every two weeks (net). What is her average MONTHLY take-home pay?

A. $2,300.00

B. $4,600.00

C. $1,150.00

D. About $2,491.67

BACKWARD B1 · concept review — Start a budget with net income

Question 1 of 5 · Learn and Apply

LEARN

Budgets start with take-home (net) pay, the money you actually receive. Gross pay includes taxes and deductions you never get to spend.

Max's gross pay is $2,600 a month and his take-home pay is $2,080. Which amount should his budget start with?

A. $520

B. $2,080

C. $2,600

D. $4,680

BACKWARD B1 · concept review — Start a budget with net income

Question 2 of 5 · Knowledge Check

Max's gross pay is $2,600 a month and his take-home pay is $2,080. If he builds his budget on $2,600, what happens?

A. He plans to spend $520 he never receives

B. He saves an extra $520 by accident

C. Nothing, because the bank adjusts it

D. His income taxes go down by $520 for the year

BACKWARD B1 · concept review — Start a budget with net income

Question 3 of 5 · Knowledge Check

Which list contains only items Max must plan for each month?

A. Rent, food, transportation, and savings

B. Rent, a vacation, and a new laptop

C. Food, gifts, and concert tickets

D. Only rent, since everything else changes

BACKWARD B1 · concept review — Start a budget with net income

Question 4 of 5 · Knowledge Check

Max's budget: income $2,080; expenses $1,900; savings $180. Is it balanced?

A. No; it has a $180 surplus

B. No; it has a $180 deficit

C. No; savings should not be included in a budget

D. Yes; income equals spending plus saving

BACKWARD B1 · concept review — Start a budget with net income

Question 5 of 5 · Knowledge Check · Practical how-to

Which tool can be used to keep a budget?

A. Only an app from your bank

B. Only a paid financial advisor or planner

C. Only a tax return

D. A spreadsheet, an app, or a notebook

GO DEEPER 1 — Pay yourself first

Question 1 of 5 · Learn and Apply

LEARN

"Pay yourself first" treats saving like a bill: a set amount goes to savings right when income arrives, often by automatic transfer. Saving "whatever is left" often leaves nothing.

"Pay yourself first" means…

A. saving first, as soon as you are paid

B. buying something fun for yourself on every payday

C. paying your own bills before your roommates pay theirs

D. saving only whatever is left at the end of the month

GO DEEPER 1 — Pay yourself first

Question 2 of 5 · Knowledge Check

Abby saves 10% of each $1,150 paycheck automatically. How much does she save in a year (26 paychecks)?

A. $115

B. $1,380

C. $2,990

D. $29,900

GO DEEPER 1 — Pay yourself first

Question 3 of 5 · Knowledge Check · Practical how-to

Why does automating savings help?

A. It removes the need to decide every payday

B. Automatic transfers earn double the usual interest rate

C. Banks require automatic savings by law

D. It prevents all spending

GO DEEPER 1 — Pay yourself first

Question 4 of 5 · Knowledge Check · Practical how-to

Abby's savings transfer is set for the day after payday. Why is that timing better than the day before payday?

A. Transfers are free only after payday

B. Interest is paid only after payday

C. It makes no difference at all

D. Money is there to transfer, so it is less likely to cause an overdraft

GO DEEPER 1 — Pay yourself first

Question 5 of 5 · Knowledge Check

Abby has $2,990 in savings, built by saving part of each paycheck. Her car needs a $400 repair. Which choice is wisest?

A. Use savings, then rebuild them over the next months

B. Put the repair on a credit card and never pay it off

C. Skip the repair and drive an unsafe car

D. Stop saving forever because savings got used

GO DEEPER 2 — Budgeting methods

Question 1 of 5 · Learn and Apply

LEARN

The envelope method sets a fixed amount for each spending category. When a category runs out, spending in it stops. Many apps copy this idea digitally.

In the envelope method, cash for each category goes in its own envelope. What happens when the "eating out" envelope is empty?

A. Money is borrowed from the rent envelope for now

B. A credit card covers the extra

C. The envelope refills automatically

D. Eating out stops until the next budget period

GO DEEPER 2 — Budgeting methods

Question 2 of 5 · Knowledge Check

A budgeting app shows Sam spent $260 of a $300 grocery budget with 8 days left in the month. About how much can he spend per day for groceries for the rest of the month?

A. $5

B. $32.50

C. $37.50

D. $40

GO DEEPER 2 — Budgeting methods

Question 3 of 5 · Knowledge Check

Which method plans to spend EVERY dollar of income on a purpose?

A. A zero-based budget
B. Spending freely and checking the balance
C. Saving whatever is left at month end
D. Paying only the minimums on all bills

GO DEEPER 2 — Budgeting methods

Question 4 of 5 · Knowledge Check

Which situation shows a budget that needs revising?

A. One unusual month with a holiday gift

B. Spending matches the plan

C. A surplus that is saved

D. Spending is over budget in the same categories every month

GO DEEPER 2 — Budgeting methods

Question 5 of 5 · Knowledge Check

Sam's grocery budget is $300, but he has spent $360, $350, and $370 in the last three months. What is the most realistic revised budget, based on his average?

A. $300

B. $360

C. $370

D. $1,080

SET 17 · Budgeting and Managing Expenses

Budget percentages and the 50/30/20 guideline

MAIN skill: Use percentages to plan and evaluate a budget

Outcome FL.BUDGET.17 · National topic: Spending · NJSLS 9.1.12: PB

Learning target: Develop a budget using percentages of income

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: What "percent of income" means (5 questions)
  Why: Budget percentages require reading a percent as a part of a whole.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Each budget share is a percent of take-home pay.
- B3 · Math link → G6-S11-M (Grade 6 6.RP.A.3.c): Find the whole, given a part and the percent
  Why: Finding income needed for a target share works backward from a percent.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Working backward with percents (5 questions)
- Go Deeper 2: Budget versus actual (5 questions)

Practical skills beyond the standards: Budget-versus-actual review

Content status: stable

MAIN — Use percentages to plan and evaluate a budget

Question 1 of 5 · Learn and Apply

LEARN

The 50/30/20 guideline is one simple starting point for a budget: about 50% of take-home pay for needs, 30% for wants, and 20% for saving and paying down debt. It is a rule of thumb, not a law; costs and goals differ.

Jess takes home $2,800 a month and uses the 50/30/20 guideline. How much does it suggest for needs?

A. $560

B. $840

C. $1,400

D. $5,600

MAIN — Use percentages to plan and evaluate a budget

Question 2 of 5 · Knowledge Check

Jess takes home $2,800 a month. Using the 50/30/20 guideline (50% needs, 30% wants, 20% saving and debt payoff), how much goes to saving and extra debt payments?

A. $200

B. $560

C. $840

D. $1,400

MAIN — Use percentages to plan and evaluate a budget

Question 3 of 5 · Learn and Apply

LEARN

To find what percent one amount is of another: part ÷ whole × 100.

Jess pays $900 rent from $2,800 take-home pay. What percent of her take-home pay is rent (nearest tenth of a percent)?

A. 3.1%

B. 31.1%

C. 32.1%

D. 311.1%

MAIN — Use percentages to plan and evaluate a budget

Question 4 of 5 · Knowledge Check

Ian wants his car costs to be no more than 15% of his $2,400 take-home pay. What is the most he should spend per month on his car?

A. $36

B. $160

C. $360

D. $2,040

MAIN — Use percentages to plan and evaluate a budget

Question 5 of 5 · Knowledge Check

Jess lives in a high-rent city where needs take 62% of her pay. What is the best way to use the 50/30/20 guideline (50% needs, 30% wants, 20% saving)?

A. As a starting point, adjusting the shares to fit her costs

B. As a legal limit she must follow exactly

C. By ignoring it, since budgets do not use percents

D. By moving her rent payment into the "wants" share of her budget

BACKWARD B1 · concept review — What "percent of income" means

Question 1 of 5 · Learn and Apply

LEARN

Percent means "per hundred." 20% of income means $20 of every $100 earned.

What does "20% of income goes to savings" mean?

A. 20 dollars of every month go to savings

B. Savings are 20 times income

C. Savings get only the first 20 dollars of each paycheck

D. 20 of every 100 dollars of income go to savings

BACKWARD B1 · concept review — What "percent of income" means

Question 2 of 5 · Knowledge Check

What is 30% of $1,000?

A. $30

B. $300

C. $970

D. $3,000

BACKWARD B1 · concept review — What "percent of income" means

Question 3 of 5 · Learn and Apply

LEARN

Percent of the whole = part ÷ whole × 100.

$250 of a $1,000 paycheck goes to rent. What percent is that?

A. 4%

B. 25%

C. 75%

D. 250%

BACKWARD B1 · concept review — What "percent of income" means

Question 4 of 5 · Knowledge Check

A budget uses 50%, 30%, and 20%. What do the percents add up to?

A. 50%

B. 80%

C. 100%

D. 120%

BACKWARD B1 · concept review — What "percent of income" means

Question 5 of 5 · Knowledge Check

If needs are 50% of $2,000, what dollar amount is that?

A. $50

B. $100

C. $1,000

D. $4,000

GO DEEPER 1 — Working backward with percents

Question 1 of 5 · Learn and Apply

LEARN

When you know the part and the percent, find the whole: whole = part ÷ percent (as a decimal).

Rent for an apartment is $1,050. Ana wants rent to be no more than 30% of her take-home pay. What monthly take-home pay does she need?

A. $315

B. $1,365

C. $3,150

D. $3,500

GO DEEPER 1 — Working backward with percents

Question 2 of 5 · Knowledge Check

Leo wants to save $300 a month, which he wants to be 15% of take-home pay. What take-home pay does this require?

A. $45

B. $345

C. $2,000

D. $4,500

GO DEEPER 1 — Working backward with percents

Question 3 of 5 · Knowledge Check

Leo's take-home pay is $1,800, and he spends $1,170 on needs. What percent is that?

A. 6.5%

B. 35%

C. 65%

D. 154%

GO DEEPER 1 — Working backward with percents

Question 4 of 5 · Knowledge Check

Leo's needs are 65%. To reach 20% savings, what is the most he can spend on wants?

A. 15%

B. 20%

C. 30%

D. 35%

GO DEEPER 1 — Working backward with percents

Question 5 of 5 · Knowledge Check

With $1,800 take-home pay and 15% for wants, how many dollars is that?

A. $27

B. $270

C. $540

D. $1,530

GO DEEPER 2 — Budget versus actual

Question 1 of 5 · Learn and Apply

LEARN

A variance is the difference between what you planned and what actually happened. Reviewing variances each month shows which parts of the plan need work.

Planned: groceries $300. Actual: $345. What is the variance, and is it over or under budget?

A. $45 under budget

B. $645 over budget

C. $15 over budget

D. $45 over budget

GO DEEPER 2 — Budget versus actual

Question 2 of 5 · Knowledge Check

What percent over budget is $345 compared with a $300 plan?

A. 13%

B. 15%

C. 45%

D. 115%

GO DEEPER 2 — Budget versus actual

Question 3 of 5 · Knowledge Check

Gas was budgeted at $120 and came in at $96. What is the variance?

A. $24 under budget

B. $24 over budget

C. $216 under budget

D. $96 under budget

GO DEEPER 2 — Budget versus actual

Question 4 of 5 · Knowledge Check

Ray budgeted $120 for gas but spent only $96, leaving $24. Which response best supports a savings goal?

A. Spend it on a want right away because it was "free"

B. Leave it unassigned so it is spent on something later

C. Lower next month's gas budget to $0

D. Move the $24 into savings

GO DEEPER 2 — Budget versus actual

Question 5 of 5 · Knowledge Check

Over 3 months, eating out was $40, $120, and $35 over budget. Which conclusion is BEST?

A. One unusual month; review it, but the plan is close

B. The budget is perfect and needs no review

C. The budget should triple the eating-out line right away

D. Budgets do not work for eating out

SET 18 · Budgeting and Managing Expenses

Irregular expenses and sinking funds

MAIN skill: Plan for periodic and irregular expenses with monthly set-asides

Outcome FL.BUDGET.18 · National topic: Spending · NJSLS 9.1.12: PB

Learning target: Develop a budget that plans for periodic and irregular expenses

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Monthly and yearly amounts (5 questions)
  Why: Sinking-fund planning converts yearly or multi-month costs to monthly amounts.
- B2 · Math link → G6-S20-M (Grade 6 6.NS.B.3): Divide multi-digit decimals
  Why: Set-asides divide totals by months.
- B3 · Math link → G6-S03-M (Grade 6 6.RP.A.2): Find and describe a unit rate
  Why: A monthly set-aside is a rate (dollars per month).

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Budgeting with irregular income (5 questions)
- Go Deeper 2: Monthly versus annual pricing (5 questions)

Practical skills beyond the standards: Sinking funds; Budgeting with irregular income

Content status: stable

MAIN — Plan for periodic and irregular expenses with monthly set-asides

Question 1 of 5 · Learn and Apply

LEARN

Some expenses come once or twice a year: car registration, insurance premiums, school fees, gifts. A sinking fund saves a little each month for a known future expense, so the full amount is ready when it is due. Monthly amount = total ÷ months until due.

Cara's car registration costs $180 once a year. How much should she set aside each month so the money is ready?

A. $15

B. $18

C. $45

D. $180

MAIN — Plan for periodic and irregular expenses with monthly set-asides

Question 2 of 5 · Learn and Apply

LEARN

A sinking fund is for a KNOWN future cost with a known date. An emergency fund is for UNKNOWN surprises, such as a job loss or a sudden repair.

Which is a sinking fund?

A. Saving $50 a month for car insurance due every six months

B. Money spent on groceries each week of the month, as needed

C. An emergency fund for surprises you cannot predict

D. A loan used to pay a bill that is already past due

MAIN — Plan for periodic and irregular expenses with monthly set-asides

Question 3 of 5 · Knowledge Check

Cara's yearly irregular costs: registration $180, car insurance $960, and holiday gifts $300. How much should she set aside each month in total?

A. $95

B. $120

C. $480

D. $1,440

MAIN — Plan for periodic and irregular expenses with monthly set-asides

Question 4 of 5 · Learn and Apply

LEARN

When the due date is less than a year away, divide by the months remaining, not by 12.

It is March. Holiday gifts ($600) will be bought in November, 8 months away. How much should Ben save each month?

A. $50

B. $66.67

C. $75

D. $600

MAIN — Plan for periodic and irregular expenses with monthly set-asides
Question 5 of 5 · Knowledge Check

Why do budgets that ignore irregular expenses often fail?

A. Irregular expenses are illegal to budget for
B. Irregular expenses are always paid by employers
C. Banks automatically pay irregular bills for free when they come
D. Large, predictable bills arrive with no money set aside

BACKWARD B1 · concept review — Monthly and yearly amounts

Question 1 of 5 · Learn and Apply

LEARN

To turn a yearly amount into a monthly amount, divide by 12. To turn a monthly amount into a yearly amount, multiply by 12.

A yearly fee is $240. What is the monthly equivalent?

A. $20

B. $24

C. $60

D. $2,880

BACKWARD B1 · concept review — Monthly and yearly amounts

Question 2 of 5 · Knowledge Check

A $35 monthly subscription costs how much per year?

A. $2.92

B. $35

C. $140

D. $420

BACKWARD B1 · concept review — Monthly and yearly amounts

Question 3 of 5 · Learn and Apply

LEARN

For a bill due every few months, divide by the number of months between bills.

A bill of $300 is due every 6 months. How much is that per month?

A. $25

B. $50

C. $300

D. $1,800

BACKWARD B1 · concept review — Monthly and yearly amounts
Question 4 of 5 · Knowledge Check

Which expense is MOST likely to be paid once a year?

A. A weekly grocery trip
B. A monthly phone bill for service
C. A daily bus fare
D. A car registration renewal

BACKWARD B1 · concept review — Monthly and yearly amounts

Question 5 of 5 · Knowledge Check

A quarterly bill is due every 3 months. How many times a year is it paid?

A. 2

B. 3

C. 4

D. 12

GO DEEPER 1 — Budgeting with irregular income

Question 1 of 5 · Learn and Apply

LEARN

When income varies (tips, commissions, gig work, seasonal jobs), budgeting on a low but realistic month keeps needs covered. Extra income in good months goes to savings or a "buffer" that carries you through slow months.

Mo's monthly income over the last six months: $1,800, $2,600, $1,500, $2,200, $1,900, $2,400. Which amount is the safest base for his budget?

A. $1,500

B. $2,067

C. $2,600

D. $12,400

GO DEEPER 1 — Budgeting with irregular income

Question 2 of 5 · Knowledge Check

Mo's monthly income over six months: $1,800, $2,600, $1,500, $2,200, $1,900, $2,400. What is his average monthly income?

A. About $2,067

B. $2,050

C. $12,400

D. $1,800

GO DEEPER 1 — Budgeting with irregular income

Question 3 of 5 · Knowledge Check

Mo budgets $1,500 a month and saves any income above that in a buffer account. In a $2,600 month, how much goes to his buffer account?

A. $533

B. $1,100

C. $1,500

D. $2,600

GO DEEPER 1 — Budgeting with irregular income

Question 4 of 5 · Knowledge Check · Practical how-to

Mo budgets $1,500 a month and keeps extra income from good months in a buffer account. In a $1,200 month, what should he do?

A. Put $300 on a credit card

B. Skip rent this month

C. Raise his monthly budget to $2,600

D. Draw $300 from his buffer account

GO DEEPER 1 — Budgeting with irregular income

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Some workers with uneven income deposit all earnings into one account and transfer a fixed amount to their spending account each month, like a salary.

Which practice makes uneven income easier to manage?

A. Paying yourself a steady "salary" from a holding account

B. Spending each paycheck as soon as it arrives

C. Budgeting from your single best month

D. Avoiding keeping any written record of your income at all

GO DEEPER 2 — Monthly versus annual pricing

Question 1 of 5 · Learn and Apply

LEARN

Many services offer a discount for paying a year at once. Compare by finding the yearly cost of the monthly plan. But a yearly plan only saves money if you would have kept the service all year.

A streaming service costs $15.99 per month or $159.99 per year. How much does the yearly plan save compared with paying monthly for 12 months?

A. $0

B. $1.99

C. $31.89

D. $144.00

GO DEEPER 2 — Monthly versus annual pricing

Question 2 of 5 · Knowledge Check

Gina usually cancels streaming services after about 6 months. For her, which plan is cheaper: 6 months at $15.99, or the $159.99 yearly plan?

A. Yearly: $159.99

B. They cost the same

C. Monthly: $191.88

D. Monthly: about $95.94

GO DEEPER 2 — Monthly versus annual pricing

Question 3 of 5 · Knowledge Check

A gym offers $40 per month with no contract, or $360 for a full year paid up front. After how many months does the yearly plan become the better deal?

A. More than 9 months

B. More than 4 months

C. More than 12 months

D. More than 3 months

GO DEEPER 2 — Monthly versus annual pricing

Question 4 of 5 · Knowledge Check

Which is a risk of a large annual prepayment?

A. The price can never change after you pay

B. You get a discount

C. Fewer bills to track

D. Paying for months you may not use

GO DEEPER 2 — Monthly versus annual pricing

Question 5 of 5 · Knowledge Check

A $12.99 monthly subscription renews automatically. Over 3 years, how much does it cost if never cancelled?

A. $38.97

B. $155.88

C. $389.70

D. $467.64

SET 19 · Budgeting and Managing Expenses

Smart shopping: unit prices, discounts, and sales tax

MAIN skill: Compare prices using unit prices, discounts, and sales tax
Outcome FL.BUDGET.19 · National topic: Spending · NJSLS 9.1.12: PB, EG
Learning target: Comparison shopping: unit prices, discounts, sales tax, and total cost

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Price, discount, tax, and total (5 questions)
  Why: Shopping math depends on keeping the price, the discount, the tax, and the total straight.
- B2 · Math link → G6-S09-M (Grade 6 6.RP.A.3.b): Compare unit rates to find the better buy or the faster rate
  Why: Unit price comparisons are unit-rate comparisons.
- B3 · Math link → G7-S63-M (Grade 7 7.RP.A.3): Find sales tax and the final cost with tax
  Why: Total cost includes tax as a percent of the price.
- B4 · Math link → G7-S66-M (Grade 7 7.RP.A.3): Solve multistep percent problems that combine a discount with tax or a tip
  Why: Sale-and-tax totals apply two percents in order.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 2: Total cost beyond the price tag (5 questions)

Practical skills beyond the standards: Spotting fake discounts; New Jersey sales tax exemptions

Content status: time-sensitive
Source: New Jersey Division of Taxation — New Jersey sales tax rate is 6.625%; most clothing and footwear and most food for home consumption are exempt. https://www.nj.gov/treasury/taxation/su_over.shtml

MAIN — Compare prices using unit prices, discounts, and sales tax

Question 1 of 5 · Learn and Apply

LEARN

A unit price is the price per unit, such as per ounce or per item: unit price = price ÷ quantity. Comparing unit prices shows which size is the better value. (A lower unit price helps only if you will use the larger amount before it spoils.)

A 12-ounce box of cereal costs $3.60. A 20-ounce box costs $5.40. Which is the better buy per ounce?

A. The 20-ounce box: $0.27 per ounce

B. The 12-ounce box: $0.30 per ounce

C. The 12-ounce box, because it costs less

D. The 20-ounce box: $0.30 per ounce

MAIN — Compare prices using unit prices, discounts, and sales tax

Question 2 of 5 · Learn and Apply

LEARN

A discount is a percent taken off the price. Discount = price × rate. Sale price = price − discount, or price × (1 − rate).

A $64 backpack is 25% off. What is the sale price?

A. $16

B. $39

C. $48

D. $80

MAIN — Compare prices using unit prices, discounts, and sales tax

Question 3 of 5 · Learn and Apply

LEARN

Sales tax is calculated by multiplying the taxable price by the tax rate. Total cost = price + tax, or price × (1 + rate). Rates differ by state and sometimes by city, and some items are exempt.

A taxable purchase costs $80. The sales tax rate is 6.5%. What is the TOTAL cost?

A. $5.20

B. $85.20

C. $86.50

D. $132.00

MAIN — Compare prices using unit prices, discounts, and sales tax

Question 4 of 5 · Learn and Apply

LEARN

When a discount and a tax both apply, the discount is taken first, and tax is then figured on the sale price.

A $120 jacket is 30% off, and the 6.5% sales tax is applied to the sale price. What is the total cost?

A. $84.00

B. $87.36

C. $89.46

D. $91.80

MAIN — Compare prices using unit prices, discounts, and sales tax

Question 5 of 5 · Knowledge Check

A store offers "Buy one, get one 50% off" on $20 shirts. If Tom buys two, what percent does he save on the pair?

A. 10%

B. 25%

C. 50%

D. 75%

BACKWARD B1 · concept review — Price, discount, tax, and total

Question 1 of 5 · Learn and Apply

LEARN

A discount lowers the price: sale price = original price − discount.

A $50 item has a $10 discount. What is the sale price?

A. $5

B. $10

C. $40

D. $60

BACKWARD B1 · concept review — Price, discount, tax, and total

Question 2 of 5 · Learn and Apply

LEARN

Sales tax raises the total: total = price + tax.

The tax on a $40 item is $2.60. What is the total?

A. $2.60

B. $37.40

C. $42.60

D. $66.00

BACKWARD B1 · concept review — Price, discount, tax, and total

Question 3 of 5 · Knowledge Check

Which word describes the percent taken OFF a price?

A. Tax

B. Total

C. Interest

D. Discount

Question 4 of 5 · Learn and Apply

LEARN

10% of an amount is the amount divided by 10.

What is 10% of $35?

A. $0.35

B. $3.50

C. $31.50

D. $35.00

BACKWARD B1 · concept review — Price, discount, tax, and total

Question 5 of 5 · Knowledge Check

Which comparison tells you the better buy between two package sizes?

A. Price per ounce of each package

B. Which package is larger

C. Which package is cheaper in total

D. Which package is on the higher shelf

GO DEEPER 1 — Stacked discounts and coupons

Question 1 of 5 · Learn and Apply

LEARN

When discounts "stack," each is applied to the price left after the previous one. Two discounts of 20% and 10% do not equal 30% off.

A $100 coat is 20% off, with an extra 10% off the sale price at checkout. What is the final price before tax?

A. $70

B. $72

C. $80

D. $90

GO DEEPER 1 — Stacked discounts and coupons

Question 2 of 5 · Knowledge Check

What single percent discount is the same as 20% off followed by 10% off?

A. 2%

B. 10%

C. 28%

D. 30%

GO DEEPER 1 — Stacked discounts and coupons

Question 3 of 5 · Knowledge Check

A $5-off coupon and a 15% discount can be used in either order on a $40 purchase. Which order gives the lower price?

A. $5 first, then 15% off: $29.75

B. Both orders give $29.00

C. 15% first, then $5 off: $34.00

D. 15% first, then $5 off: $29.00

GO DEEPER 1 — Stacked discounts and coupons

Question 4 of 5 · Knowledge Check

An ad says "Up to 70% off!" What does this usually mean?

A. Only some items are 70% off; many are discounted less

B. Every item is 70% off

C. Every item is at least 70% off

D. The store adds 70% to prices

GO DEEPER 1 — Stacked discounts and coupons

Question 5 of 5 · Knowledge Check

An item's price was $80 last week and is now "on sale" for $80 after being raised to $100 and marked 20% off. What happened?

A. The "sale" price is the same as last week's price

B. Tom saves $20 compared with last week

C. Tom saves 20% compared with what he paid last week

D. The price went down by $100

GO DEEPER 2 — Total cost beyond the price tag

Question 1 of 5 · Learn and Apply

LEARN

Compare total cost: price + shipping + fees + tax. A lower sticker price can cost more in total.

Store A sells headphones for $59 plus $8 shipping. Store B sells them for $64 with free shipping. Which costs less, and by how much?

A. Store A, by $5

B. Store B, by $5

C. They cost the same

D. Store B, by $3

GO DEEPER 2 — Total cost beyond the price tag

Question 2 of 5 · Knowledge Check

A store offers free shipping on orders of $50 or more. Jen's cart totals $42, and shipping is $7. She adds a $10 item she does not need. What did that cost her compared with paying shipping?

A. $3 more

B. $7 less

C. $10 less

D. $17 more

GO DEEPER 2 — Total cost beyond the price tag

Question 3 of 5 · Learn and Apply

LEARN

Sales tax rules are set by each state. Some items, such as groceries, clothing, or medicine, may be exempt. Always check your own state's rules.

In New Jersey, most clothing and most grocery food are exempt from sales tax, and the general rate is 6.625%. What is the tax on a $40 shirt and a $40 desk lamp bought together?

A. $0.00

B. $2.60

C. $2.65

D. $5.30

GO DEEPER 2 — Total cost beyond the price tag

Question 4 of 5 · Knowledge Check

Which purchase decision considers the total cost of owning an item?

A. Choosing the printer with the lowest sticker price only
B. Choosing the printer with the biggest rebate this week
C. Choosing the printer with the lowest monthly payment plan
D. Comparing printers by price plus yearly ink costs

GO DEEPER 2 — Total cost beyond the price tag

Question 5 of 5 · Knowledge Check

Printer X costs $60 and $80 a year in ink. Printer Y costs $150 and $35 a year in ink. Over 3 years, which costs less in total?

A. Printer Y: $255 vs $300

B. Printer X: $140 vs $185

C. Printer X: $60 vs $150

D. They cost the same over 3 years

SET 20 · Budgeting and Managing Expenses

Spending decisions and behavioral biases

MAIN skill: Use a decision process and recognize biases that lead to poor spending choices

Outcome FL.BUDGET.20 · National topic: Spending · NJSLS 9.1.12: FP, PB

Learning target: Influences on spending decisions: behavioral biases, marketing, and social pressure

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

B1 · Concept review: Making a choice: alternatives and criteria (5 questions)

Why: Recognizing biases requires first knowing what a reasoned choice looks like.

After 5 of 5 correct, Go Deeper unlocks (a chain):

Go Deeper 1: Marketing tactics and spending traps (5 questions)

Go Deeper 2: Social influence and financial values (5 questions)

Practical skills beyond the standards: 24-hour rule for unplanned purchases; Recognizing dark patterns

Content status: stable

MAIN — Use a decision process and recognize biases that lead to poor spending choices

Question 1 of 5 · Learn and Apply

LEARN

Every spending choice has an opportunity cost: the next-best thing you give up. Thinking about what else money could do helps you choose deliberately rather than automatically.

Kai has $200. He can buy a game console accessory or save toward a used bike. If he buys the accessory, what is the opportunity cost?

A. The $200 price of the accessory itself, paid at the register

B. Nothing, because he still has the accessory

C. The sales tax on the accessory

D. The progress toward the bike that he gives up

MAIN — Use a decision process and recognize biases that lead to poor spending choices

Question 2 of 5 · Learn and Apply

LEARN

Anchoring is relying too much on the first number you see. A high "original" price can make a sale price feel cheap, even when it is not a good deal compared with other options.

A sign says "Was $200, now $120!" Mia feels the $120 price is a great deal, even though similar items cost $100 elsewhere. Which bias is at work?

A. Sunk cost thinking about money already spent

B. Loss aversion about a past investment loss

C. The bandwagon effect from friends' choices

D. Anchoring on the "was" price

MAIN — Use a decision process and recognize biases that lead to poor spending choices

Question 3 of 5 · Learn and Apply

LEARN

A sunk cost is money already spent that cannot be recovered. The sunk cost fallacy is letting it drive a new decision. Good decisions compare the future benefits and costs of each option.

Leo paid $60 for a concert ticket but feels sick on the day. He goes anyway "so the money isn't wasted." What is this called?

A. The sunk cost fallacy

B. Opportunity cost bias

C. Anchoring

D. Comparison shopping

MAIN — Use a decision process and recognize biases that lead to poor spending choices

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Present bias is valuing what we want now much more than what we want later. Impulse buying feeds on it. Adding a delay, such as a 24-hour rule or removing saved cards, gives the planning part of the brain time to weigh in.

Ana often buys things online late at night and regrets them. Which strategy targets this habit directly?

A. Save her card details on every site so checkout is faster

B. Turn on more shopping notifications

C. Shop only during sales events

D. Wait 24 hours before buying anything not planned

MAIN — Use a decision process and recognize biases that lead to poor spending choices
Question 5 of 5 · Knowledge Check

Which ordering follows a sound decision process?

A. Set a goal, list options, compare, choose, review
B. Choose quickly, then find reasons to justify the choice later
C. List options, choose the most popular, skip review
D. Compare costs only after buying

BACKWARD B1 · concept review — Making a choice: alternatives and criteria

Question 1 of 5 · Learn and Apply

LEARN

Every decision has alternatives (the options) and criteria (what matters to you, such as price, quality, or coverage). Good choices compare alternatives using your criteria.

Sam is choosing a phone plan. What are "alternatives"?

A. The different plans he could choose

B. The reasons he wants a new phone now

C. The phone he already owns

D. The bill he paid last month

BACKWARD B1 · concept review — Making a choice: alternatives and criteria
Question 2 of 5 · Learn and Apply

LEARN
A criterion (plural: criteria) is a standard you use to judge options, such as cost, quality, or features that matter to you.

Which is a CRITERION for choosing a phone plan?

A. A free phone case that comes with the plan
B. How many friends use the same carrier
C. Which carrier has the most TV ads
D. Monthly price

BACKWARD B1 · concept review — Making a choice: alternatives and criteria
Question 3 of 5 · Knowledge Check

Plan A: $35, 5 GB. Plan B: $45, unlimited. Sam uses about 3 GB a month. Which plan fits his criteria of low cost and enough data?

A. Plan A

B. Plan B, because unlimited always sounds better

C. Neither, because both cost money

D. Plan B, because it costs more

BACKWARD B1 · concept review — Making a choice: alternatives and criteria
Question 4 of 5 · Knowledge Check

Plan A costs $35 a month and Plan B costs $45 a month. What is the yearly savings from choosing Plan A?

A. $10
B. $80
C. $120
D. $540

BACKWARD B1 · concept review — Making a choice: alternatives and criteria

Question 5 of 5 · Knowledge Check

After choosing, why review the decision a month later?

A. Because contracts require monthly reviews

B. To find someone to blame

C. Because reviewing a purchase lowers its price later

D. To check whether the choice worked as expected

GO DEEPER 1 — Marketing tactics and spending traps

Question 1 of 5 · Learn and Apply

LEARN

Scarcity and urgency messages ("only a few left," countdown timers) push quick decisions. Sometimes they are true, sometimes not. Slowing down protects your budget.

A website shows "Only 2 left!" and a countdown timer. What is the intended effect?

A. Rushing the buyer before comparing options

B. Helping the buyer compare options calmly

C. Lowering the price

D. Showing the store's full inventory honestly

GO DEEPER 1 — Marketing tactics and spending traps

Question 2 of 5 · Knowledge Check · Practical how-to

A "free trial" requires a card and converts to $14.99 a month unless cancelled. What should Nia do before signing up?

A. Assume it will cancel itself automatically

B. Use a friend's card instead

C. Ignore the terms, since the trial is advertised as free

D. Set a reminder to cancel before the trial ends

GO DEEPER 1 — Marketing tactics and spending traps

Question 3 of 5 · Knowledge Check

A store's loyalty program gives 5% back in points. Raj spends $200 more than he planned to earn points. What did he gain compared with not overspending?

A. He saved $10

B. He broke even

C. He saved $200

D. He spent $190 more, net of $10 in points

GO DEEPER 1 — Marketing tactics and spending traps

Question 4 of 5 · Learn and Apply

LEARN

"Dark patterns" are design tricks that steer people into choices they did not intend, such as hidden fees, pre-checked add-ons, or hard-to-find cancellation steps.

Which design choice is a "dark pattern" that makes spending easier than intended?

A. Showing the total price before checkout

B. Listing all fees clearly up front

C. Making cancellation much harder than signing up

D. Offering a clear "cancel" button on every account page

GO DEEPER 1 — Marketing tactics and spending traps

Question 5 of 5 · Knowledge Check · Practical how-to

At checkout, a $4.99 "protection plan" box is already checked on Ben's $25 order. What should he do?

A. Uncheck it unless he decided he wants it

B. Leave it, since stores must check what customers need

C. Pay it, because it is under $5

D. Buy two to be safe

GO DEEPER 2 — Social influence and financial values

Question 1 of 5 · Learn and Apply

LEARN

Influencers are often paid to promote products and may earn money from each sale. Federal rules require disclosure of these relationships, but the incentive still shapes the message.

An influencer promotes a product with a discount code. Which fact matters MOST?

A. The influencer may be paid for each sale

B. The influencer has many followers

C. The video looks professional and well produced

D. The product is popular this week

GO DEEPER 2 — Social influence and financial values

Question 2 of 5 · Knowledge Check

Friends spend $80 on a dinner out each weekend. Tara's budget allows $30. Which choice best balances friendship and her budget?

A. Join every time and put the extra on a credit card

B. Skip all social events forever

C. Join for a lower-cost part or suggest a cheaper place

D. Cut her rent payment to afford it

GO DEEPER 2 — Social influence and financial values

Question 3 of 5 · Knowledge Check

Seeing friends' purchases online makes Eli feel he must buy similar things. What is this effect sometimes called?

A. Compound interest

B. Diversification

C. Amortization

D. Social comparison, or "keeping up with the Joneses"

GO DEEPER 2 — Social influence and financial values

Question 4 of 5 · Knowledge Check

Which statement about money and values is MOST accurate?

A. More spending always leads to more happiness over time

B. Values have no effect on financial choices

C. Spending that matches your priorities satisfies more

D. Everyone should have the same priorities

GO DEEPER 2 — Social influence and financial values

Question 5 of 5 · Knowledge Check · Practical how-to

Tara writes her top three money priorities and checks big purchases against them. What does this help with?

A. Raising her credit limit so priorities are easier to afford

B. Avoiding all spending

C. Spending first and checking priorities later

D. Making choices that match her goals

SET 21 · Saving, Emergency Funds, and Interest

Setting savings goals

MAIN skill: Set specific savings goals and calculate the time or monthly amount needed to reach them

Outcome FL.SAVE.21 · National topic: Saving · NJSLS 9.1.12: PB

Learning target: Develop savings goals and plans to achieve them

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Why and how people save (5 questions)
  - Why: Goal math depends on understanding saving as setting money aside on purpose for later.
- B2 · Math link → G6-S52-M (Grade 6 6.EE.B.7): Solve one-step equations of the form px = q
  - Why: Monthly saving × months = goal is a one-step equation.
- B3 · Math link → G7-S31-M (Grade 7 7.EE.B.4.a): Solve word problems that lead to equations of the form px + q = r
  - Why: Goals with a starting balance lead to px + q = r.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Goals with a starting balance and a deadline (5 questions)
- Go Deeper 2: Balancing several goals (5 questions)

Practical skills beyond the standards: Writing SMART goals

Content status: stable

MAIN — Set specific savings goals and calculate the time or monthly amount needed to reach them

Question 1 of 5 · Learn and Apply

LEARN

Effective goals are often written as SMART: Specific, Measurable, Achievable, Relevant, and Time-bound. "Save $1,200 for a laptop by June" names the amount, the purpose, and the deadline, so progress can be tracked.

Which savings goal is the most SPECIFIC and measurable?

A. Save $1,200 for a used laptop by next June

B. Save more money this year than I did last year

C. Become better at saving at some point soon

D. Try to stop spending so much on everything

MAIN — Set specific savings goals and calculate the time or monthly amount needed to reach them

Question 2 of 5 · Learn and Apply

LEARN

Ignoring interest: months needed = goal ÷ monthly saving. Monthly saving needed = goal ÷ months available.

Dina saves $150 a month toward an $1,800 goal, starting from $0. How many months will it take (ignoring interest)?

A. 12 months

B. 120 months

C. 1,650 months

D. 10 months

MAIN — Set specific savings goals and calculate the time or monthly amount needed to reach them

Question 3 of 5 · Knowledge Check

Raul wants $2,400 for a car down payment in 16 months. How much must he save each month (ignoring interest)?

A. $150

B. $200

C. $240

D. $38,400

MAIN — Set specific savings goals and calculate the time or monthly amount needed to reach them

Question 4 of 5 · Learn and Apply

LEARN

If you have a starting amount, subtract it first: monthly saving = (goal − amount saved) ÷ months. This is the equation p·m + start = goal solved for p.

Raul wants $2,400 for a car down payment in 16 months and already has $600 saved. How much must he save each month?

A. $37.50

B. $112.50

C. $150.00

D. $187.50

MAIN — Set specific savings goals and calculate the time or monthly amount needed to reach them

Question 5 of 5 · Knowledge Check

Which goal is LONG-TERM?

A. Saving for a concert ticket next month

B. Saving for a phone in six months

C. Saving for a prom outfit this spring

D. Saving for retirement in 40 years

BACKWARD B1 · concept review — Why and how people save

Question 1 of 5 · Learn and Apply

LEARN

Saving means not spending part of your income now so you can use it later, for a goal, an emergency, or the future.

What is saving?

A. Spending money as soon as it is earned

B. Borrowing money to buy something now

C. Setting aside income now to use later

D. Paying a bill on time

BACKWARD B1 · concept review — Why and how people save

Question 2 of 5 · Knowledge Check

Which is a GOOD reason to save?

A. To make your current paycheck larger

B. To avoid ever needing a budget

C. To lower your tax rate this year

D. To pay for a known future expense without borrowing

BACKWARD B1 · concept review — Why and how people save

Question 3 of 5 · Knowledge Check

Kim saves $20 a week for 10 weeks. How much has she saved?

A. $2

B. $20

C. $30

D. $200

BACKWARD B1 · concept review — Why and how people save

Question 4 of 5 · Knowledge Check

Kim wants $300 and saves $20 a week. How many weeks will it take?

A. 6,000 weeks

B. 280 weeks

C. 15 weeks

D. 10 weeks

BACKWARD B1 · concept review — Why and how people save

Question 5 of 5 · Knowledge Check

Which habit makes saving most consistent?

A. Saving a set amount each payday

B. Saving only when there is money left over at month end

C. Saving only in months with birthdays

D. Waiting until earning a higher salary

GO DEEPER 1 — Goals with a starting balance and a deadline

Question 1 of 5 · Learn and Apply

LEARN

A savings plan with a starting amount is linear: total = start + (monthly amount × months). Set the total equal to the goal and solve.

Lia has $350 and saves $65 a month. Which equation finds the months m until she has $1,000?

A. 350 + 65m = 1,000

B. 65 + 350m = 1,000

C. 350m + 65m = 1,000

D. 65m = 1,000 + 350

GO DEEPER 1 — Goals with a starting balance and a deadline

Question 2 of 5 · Knowledge Check

Solve 350 + 65m = 1,000. After how many whole months will Lia reach at least $1,000?

A. 15 months

B. 9 months

C. 20 months

D. 10 months

GO DEEPER 1 — Goals with a starting balance and a deadline

Question 3 of 5 · Knowledge Check

Lia has $350 and wants $1,000 in 8 months. How much must she save per month (nearest dollar, rounding up)?

A. $65

B. $81

C. $82

D. $125

GO DEEPER 1 — Goals with a starting balance and a deadline

Question 4 of 5 · Knowledge Check

Sam's goal: $3,000 in 2 years. He has $600 and can save $90 a month. Will he make it?

A. Yes; he will have $3,000 exactly

B. Yes; he will have $2,760

C. No; he will have $2,760, which is $240 short

D. No; he will have only $2,160

GO DEEPER 1 — Goals with a starting balance and a deadline

Question 5 of 5 · Knowledge Check

How much more per month would Sam need to close a $240 gap over 24 months?

A. $5

B. $10

C. $20

D. $240

GO DEEPER 2 — Balancing several goals

Question 1 of 5 · Learn and Apply

LEARN

When there are several goals, rank them by importance and timing, then divide monthly savings among them. Emergency savings usually come first because they protect every other goal.

Ray can save $200 a month. Goals: emergency fund (most important), a $600 trip in 6 months, and a car in 3 years. Which plan best reflects his priorities?

A. $200 to the trip only, then everything else

B. $200 to the car only for 3 years

C. $100 emergency fund, $100 trip, car later

D. Nothing until he earns more

GO DEEPER 2 — Balancing several goals

Question 2 of 5 · Knowledge Check

After the trip, Ray sends $150 a month to his car fund. How much will he have after 30 months?

A. $180

B. $1,800

C. $4,500

D. $6,000

GO DEEPER 2 — Balancing several goals

Question 3 of 5 · Knowledge Check · Practical how-to

Why keep separate "buckets" or accounts for different goals?

A. Separate accounts always earn more interest

B. Banks require one account per goal

C. It lowers taxes on savings

D. It shows progress on each goal and avoids spending one goal's money on another

GO DEEPER 2 — Balancing several goals

Question 4 of 5 · Knowledge Check

Ray's goals, in priority order, are an emergency fund, a trip, and a car. He gets a $300 birthday gift. Which use matches his priorities?

A. Add it to the emergency fund first

B. Spend it all on wants right away

C. Add it to the car goal only

D. Leave it in his wallet for months

GO DEEPER 2 — Balancing several goals

Question 5 of 5 · Knowledge Check

Ray saves for several goals ranked by importance. If his income drops, which goal should he pause first?

A. The emergency fund

B. All goals equally

C. Rent

D. The least important, least urgent goal

SET 22 · Saving, Emergency Funds, and Interest

Emergency funds

MAIN skill: Size, build, and use an emergency fund

Outcome FL.SAVE.22 · National topic: Saving · NJSLS 9.1.12: PB, RM

Learning target: Emergency savings: purpose, size, and where to keep them

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Expected and unexpected expenses (5 questions)
  Why: Knowing which costs are surprises explains why an emergency fund is separate from goal savings.
- B2 · Math link → G6-S19-M (Grade 6 6.NS.B.3): Multiply multi-digit decimals
  Why: Fund targets multiply monthly expenses by months.
- B3 · Math link → G6-S20-M (Grade 6 6.NS.B.3): Divide multi-digit decimals
  Why: Months covered divides the fund by monthly expenses.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Building the fund over time (5 questions)
- Go Deeper 2: Emergency fund or debt payoff? (5 questions)

Practical skills beyond the standards: Starter emergency fund; Choosing between saving and debt payoff

Content status: stable

Source: CFPB — An emergency fund is money set aside for unplanned expenses or financial emergencies; start small and build it over time. https://www.consumerfinance.gov/an-essential-guide-to-building-an-emergency-fund/

MAIN — Size, build, and use an emergency fund

Question 1 of 5 · Learn and Apply

LEARN

An emergency fund is money saved for unexpected events: a lost job, a medical bill, a car repair. It helps you avoid high-cost borrowing when surprises happen. A common guideline is 3 to 6 months of essential expenses, built up gradually. Even a small fund helps.

What is an emergency fund for?

A. Planned purchases such as a vacation next summer

B. Investing in stocks for the highest return

C. Unexpected costs such as a car repair or a job loss

D. Paying for holiday gifts each December

MAIN — Size, build, and use an emergency fund

Question 2 of 5 · Knowledge Check

Jo's essential expenses are $1,650 a month. What is a 3-month emergency fund target?

A. $550

B. $1,650

C. $4,950

D. $9,900

MAIN — Size, build, and use an emergency fund

Question 3 of 5 · Learn and Apply

LEARN

Emergency money must be safe and available quickly. Insured savings accounts keep the money stable and accessible. Investments can lose value right when you need them, and long-term CDs charge penalties for early withdrawal.

Where is the best place to keep an emergency fund?

A. An insured savings account she can reach quickly

B. A stock fund, because it grows faster on average

C. A 5-year CD with a large early-withdrawal penalty

D. Cash in a drawer at home

MAIN — Size, build, and use an emergency fund

Question 4 of 5 · Knowledge Check

Which situation is an appropriate use of an emergency fund?

A. A sale on concert tickets that ends tonight

B. A planned spring break trip

C. A new phone because a friend got one

D. Replacing a broken refrigerator needed for food

MAIN — Size, build, and use an emergency fund

Question 5 of 5 · Knowledge Check

Jo has $3,000 saved and essential expenses of $1,200 a month. How many months could the fund cover?

A. 25 months

B. 0.4 months

C. 2.5 months

D. 4.2 months

BACKWARD B1 · concept review — Expected and unexpected expenses

Question 1 of 5 · Learn and Apply

LEARN

Expected expenses are known in advance (rent, bills, registration). Unexpected expenses are surprises (repairs, medical costs, job loss).

Which expense is UNEXPECTED?

A. A dentist visit for a cracked tooth

B. Monthly rent

C. A yearly car registration

D. A phone bill

BACKWARD B1 · concept review — Expected and unexpected expenses

Question 2 of 5 · Knowledge Check

How is an emergency fund different from a sinking fund?

A. It is for vacations instead of bills

B. It earns no interest

C. It is for unknown surprises, not a known future bill

D. It is borrowed money

BACKWARD B1 · concept review — Expected and unexpected expenses
Question 3 of 5 · Knowledge Check

Without savings, how do many people pay for a surprise $500 bill?

A. By borrowing, often at high cost
B. By getting a free refund from the government
C. By skipping it with no consequence
D. With money that appears in their account

BACKWARD B1 · concept review — Expected and unexpected expenses
Question 4 of 5 · Knowledge Check

Paying a $500 repair with a credit card at 24% APR and taking a year to pay it off can cost about how much in interest (rough estimate, half the balance outstanding on average)?

A. $0
B. $24
C. $60
D. $120

BACKWARD B1 · concept review — Expected and unexpected expenses

Question 5 of 5 · Knowledge Check

Which is a reasonable FIRST emergency-fund target for a teen with a part-time job?

A. Six months of a full adult household's expenses

B. Nothing until age 30

C. Exactly $1 million

D. A starter amount such as $500

GO DEEPER 1 — Building the fund over time

Question 1 of 5 · Knowledge Check

Jo saves $275 a month toward a $4,950 target, starting from $0. How many months will it take?

A. 12 months

B. 16 months

C. 18 months

D. 20 months

GO DEEPER 1 — Building the fund over time

Question 2 of 5 · Knowledge Check

Jo's emergency fund target is $4,950. She starts with a $1,500 tax refund and saves $275 a month. How many months of saving does she need (rounded up)?

A. 18 months

B. 12 months

C. 5 months

D. 13 months

GO DEEPER 1 — Building the fund over time

Question 3 of 5 · Knowledge Check · Practical how-to

Jo used $800 from her emergency fund for a car repair. What should she do next?

A. Rebuild the fund with regular deposits

B. Leave it lower permanently

C. Borrow $800 to refill it at once

D. Stop paying her other bills

GO DEEPER 1 — Building the fund over time

Question 4 of 5 · Knowledge Check · Practical how-to

Which automatic setup best builds an emergency fund?

A. Keeping the fund in checking with everyday money

B. Moving money only when she remembers

C. A recurring transfer on payday to a separate savings account

D. Linking the fund to a debit card for shopping

GO DEEPER 1 — Building the fund over time

Question 5 of 5 · Knowledge Check

Jo's fund earns 4% a year. If it stays near $4,950 for a year, about how much interest does it earn?

A. $19.80

B. $198

C. $1,980

D. $5,148

GO DEEPER 2 — Emergency fund or debt payoff?

Question 1 of 5 · Learn and Apply

LEARN

High-interest debt grows quickly, but with no savings at all, the next surprise goes back on the card. A common approach: keep a small starter emergency fund, then put extra money toward high-interest debt, then build the full fund.

Kyle has $1,000 saved and a $2,000 credit card balance at 24% APR. Many planners suggest which approach?

A. Keep a small starter fund while paying down the card aggressively

B. Spend the $1,000 on wants, then pay minimums

C. Never pay the card until the fund reaches six months

D. Close the savings account and stop saving

GO DEEPER 2 — Emergency fund or debt payoff?

Question 2 of 5 · Knowledge Check

Interest on $2,000 at 24% for one year (simple estimate) is how much?

A. $48

B. $240

C. $480

D. $2,480

GO DEEPER 2 — Emergency fund or debt payoff?

Question 3 of 5 · Knowledge Check

Savings earn 4% while the card charges 24%. Moving $500 from savings to the card saves about how much per year in net interest?

A. $20

B. $100

C. $120

D. $140

GO DEEPER 2 — Emergency fund or debt payoff?

Question 4 of 5 · Knowledge Check

Why might someone still keep a few hundred dollars in savings while paying debt?

A. Because savings accounts require it by law

B. Because card interest stops when you have savings

C. Because debt does not cost anything

D. So a small surprise does not go back on the card

GO DEEPER 2 — Emergency fund or debt payoff?

Question 5 of 5 · Knowledge Check

Kyle has paid off his credit card, which had taken $150 a month in payments. His emergency fund is still small. What is a sensible next step?

A. Increase spending by the payment amount

B. Open three new cards

C. Send the former card payments to build the full emergency fund

D. Stop budgeting

SET 23 · Saving, Emergency Funds, and Interest

Simple interest

MAIN skill: Calculate simple interest and the resulting balance

Outcome FL.SAVE.23 · National topic: Saving · NJSLS 9.1.12: PB, CDM

Learning target: Calculate interest earned on savings (simple interest)

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Principal, interest, and balance (5 questions)
  Why: Interest problems fail when students confuse principal, interest, and balance.
- B2 · Math link → G7-S10-M (Grade 7 7.RP.A.3): Find simple interest
  Why: This set applies the Grade 7 simple interest skill.
- B3 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Interest for one year is a percent of the principal.
- B4 · Math link → G6-S19-M (Grade 6 6.NS.B.3): Multiply multi-digit decimals
  Why: I = Prt multiplies three factors, including a decimal rate.
- B5 · Math link → G6-S44-M (Grade 6 6.EE.A.2.c): Evaluate expressions and formulas for given values
  Why: Simple interest substitutes values into a formula.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Solving the interest formula for any variable (5 questions)
- Go Deeper 2: Simple interest in borrowing (5 questions)

Practical skills beyond the standards: Solving I = Prt for any variable

Content status: stable

MAIN — Calculate simple interest and the resulting balance

Question 1 of 5 · Learn and Apply

LEARN

Simple interest is calculated using I = Prt, where P is the principal (the starting amount), r is the annual interest rate written as a decimal, and t is the time in years.

A savings account contains $2,400 and earns 5% simple annual interest. How much INTEREST will the account earn over three years?

A. $120

B. $360

C. $2,520

D. $3,600

MAIN — Calculate simple interest and the resulting balance

Question 2 of 5 · Learn and Apply

LEARN

Interest is only the amount earned. The balance is the principal plus the interest: A = P + I.

A savings account starts with $2,400 and earns 5% simple annual interest for 3 years. What is the BALANCE at the end?

A. $360

B. $2,405

C. $2,520

D. $2,760

MAIN — Calculate simple interest and the resulting balance

Question 3 of 5 · Learn and Apply

LEARN

Time in I = Prt must be in years. Convert months to years by dividing by 12: 6 months = 0.5 year.

$1,800 earns 4% simple interest for 6 months. How much interest is earned?

A. $7.20

B. $36

C. $72

D. $432

MAIN — Calculate simple interest and the resulting balance

Question 4 of 5 · Learn and Apply

LEARN

Solve I = Prt for the rate: r = I ÷ (P × t). Then write the decimal as a percent.

$5,000 earned $600 of simple interest in 3 years. What was the annual rate?

A. 0.4%

B. 4%

C. 12%

D. 25%

MAIN — Calculate simple interest and the resulting balance

Question 5 of 5 · Knowledge Check

In I = Prt, which quantity is the principal for a $1,500 deposit that earns $90 of interest?

A. $90

B. $1,410

C. $1,500

D. $1,590

BACKWARD B1 · concept review — Principal, interest, and balance

Question 1 of 5 · Learn and Apply

LEARN

The principal is the original amount deposited or borrowed. Interest is the extra money earned (or charged). The balance is principal plus interest.

Ana deposits $300. A year later she has $309. Which amount is the PRINCIPAL?

A. $3

B. $9

C. $300

D. $309

BACKWARD B1 · concept review — Principal, interest, and balance

Question 2 of 5 · Knowledge Check

Ana deposits $300, and a year later she has $309. How much INTEREST did she earn?

A. $9

B. $300

C. $309

D. $609

BACKWARD B1 · concept review — Principal, interest, and balance

Question 3 of 5 · Knowledge Check

Ana earned $9 of interest on a $300 deposit in one year. What percent of the principal was the interest?

A. 0.03%

B. 3%

C. 9%

D. 97%

BACKWARD B1 · concept review — Principal, interest, and balance

Question 4 of 5 · Knowledge Check

Which word describes the amount owed or saved after interest is added?

A. Balance

B. Principal

C. Rate

D. Term

BACKWARD B1 · concept review — Principal, interest, and balance

Question 5 of 5 · Learn and Apply

LEARN

For a borrower, interest is the cost of using the lender's money. Total repaid = principal + interest.

Leo borrows $1,000 and repays $1,080. What was the cost of borrowing?

A. $1,080 of interest

B. $1,000 of interest

C. $0, because he repaid it

D. $80 of interest

GO DEEPER 1 — Solving the interest formula for any variable

Question 1 of 5 · Learn and Apply

LEARN

The formula I = Prt can be solved for any variable: P = I ÷ (rt), r = I ÷ (Pt), t = I ÷ (Pr).

How much must be deposited at 5% simple interest to earn $200 in 2 years?

A. $20

B. $400

C. $2,000

D. $4,000

GO DEEPER 1 — Solving the interest formula for any variable

Question 2 of 5 · Knowledge Check

How long will it take $3,000 at 6% simple interest to earn $450?

A. 25 years

B. 0.4 years

C. 2.5 years

D. 1.5 years

GO DEEPER 1 — Solving the interest formula for any variable

Question 3 of 5 · Knowledge Check

Which rearrangement of I = Prt correctly gives t?

A. t = I / (Pr)

B. t = IPr

C. t = Pr / I

D. t = I − Pr

GO DEEPER 1 — Solving the interest formula for any variable

Question 4 of 5 · Knowledge Check

$4,000 at 3.5% simple interest earns how much in 18 months?

A. $140

B. $210

C. $252

D. $2,520

GO DEEPER 1 — Solving the interest formula for any variable

Question 5 of 5 · Knowledge Check

A loan of $800 at 9% simple interest is repaid after 8 months. What is the total repaid?

A. $48

B. $848

C. $857.60

D. $872

GO DEEPER 2 — Simple interest in borrowing

Question 1 of 5 · Learn and Apply

LEARN

Some loans charge simple interest on the original principal. For borrowers, I = Prt is the cost of the loan.

A friend's family business offers Tim a $1,200 loan at 6% simple interest for 2 years. How much interest will Tim pay?

A. $14.40

B. $72

C. $144

D. $1,344

GO DEEPER 2 — Simple interest in borrowing

Question 2 of 5 · Knowledge Check

Tim owes $1,344 in total ($1,200 borrowed plus $144 interest). If he repays it in 24 equal monthly payments, what is each payment?

A. $6

B. $50

C. $56

D. $112

GO DEEPER 2 — Simple interest in borrowing

Question 3 of 5 · Knowledge Check

Two loans of $1,000 for 1 year: Loan A charges 8% simple interest; Loan B charges a flat $95 fee. Which costs less, and by how much?

A. Loan B, by $15

B. Loan A, by $95

C. They cost the same

D. Loan A, by $15

GO DEEPER 2 — Simple interest in borrowing

Question 4 of 5 · Knowledge Check

Why do lenders charge interest?

A. Because the law requires every loan to charge 10%

B. To cover the borrower's taxes

C. Because money loses value only for lenders

D. To be paid for lending money and taking the risk of not being repaid

GO DEEPER 2 — Simple interest in borrowing

Question 5 of 5 · Knowledge Check

Which borrower is likely to be offered a LOWER interest rate?

A. One who has missed several payments

B. One who applies for many loans at once

C. One with a strong record of repaying debts on time

D. One with no income to repay

SET 24 · Saving, Emergency Funds, and Interest

Compound interest

MAIN skill: Calculate compound interest and compare it with simple interest

Outcome FL.SAVE.24 · National topic: Saving · NJSLS 9.1.12: PB, FI

Learning target: Compound interest: calculate and explain how interest compounds

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Interest on interest (5 questions)
  Why: Compound interest makes sense only after students see that added interest becomes part of the balance.
- B2 · Math link → G6-S40-M (Grade 6 6.EE.A.1): Evaluate numerical expressions with whole-number exponents
  Why: A = P(1 + r)^t requires evaluating a power.
- B3 · Math link → G5-S01-M (Grade 5 5.OA.A.1): Evaluate expressions that use parentheses
  Why: The order of operations matters: compute 1 + r first, then the power, then multiply.
- B4 · Math link → ALG1-S55-M (Algebra 1 HSF-LE.A.1.c): Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval
  Why: Compound interest is growth by a constant percent per year.
- B5 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Each year's interest is a percent of the balance.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Reading an exponential growth model (5 questions)
- Go Deeper 2: Working backward: present value (5 questions)

Content status: stable

MAIN — Calculate compound interest and compare it with simple interest

Question 1 of 5 · Learn and Apply

LEARN

When interest is compounded annually, interest is calculated on the current balance, including previously earned interest. For a constant annual rate, A = P(1 + r)^t.

$1,000 earns 10% annually, compounded once per year. Assuming the rate stays constant and there are no deposits or withdrawals, what is the balance after two years?

A. $1,100

B. $1,200

C. $1,210

D. $1,220

MAIN — Calculate compound interest and compare it with simple interest

Question 2 of 5 · Learn and Apply

LEARN

With compounding, each year's interest is figured on the balance at the start of that year. Year 1 interest is added to the principal, so year 2 interest is larger.

$500 is deposited at 4% interest compounded annually. How much interest is earned in the SECOND year?

A. $20.00

B. $20.80

C. $40.80

D. $540.80

MAIN — Calculate compound interest and compare it with simple interest

Question 3 of 5 · Learn and Apply

LEARN

Simple interest is figured only on the principal: I = Prt. Compound interest is figured on the growing balance: A = P(1 + r)^t, and interest = A − P. The gap between them grows over time.

$5,000 earns 4% per year for 3 years. How much MORE interest does annual compounding earn than simple interest?

A. $24.32

B. $200.00

C. $600.00

D. $624.32

MAIN — Calculate compound interest and compare it with simple interest

Question 4 of 5 · Learn and Apply

LEARN

To use A = P(1 + r)^t: write the rate as a decimal, add 1, raise to the number of years first (exponents before multiplication), then multiply by P.

$2,000 is invested at 6% compounded annually for 10 years. What is the balance (nearest cent)?

A. $2,120.00

B. $3,200.00

C. $3,378.96

D. $3,581.70

MAIN — Calculate compound interest and compare it with simple interest

Question 5 of 5 · Knowledge Check

Two accounts both start with $1,000 at 5% for 20 years. One pays simple interest; one compounds annually. Why does the compound account end higher?

A. It earns interest on earlier interest as well as on the principal

B. Its stated rate is really higher than 5%, which the bank does not show

C. Simple interest accounts charge fees that reduce the balance

D. Compounding adds a bonus deposit each year

BACKWARD B1 · concept review — Interest on interest

Question 1 of 5 · Learn and Apply

LEARN

After interest is added, the balance = old balance + interest. That new balance is what earns interest next year when interest compounds.

$100 earns 10% interest for one year. What is the balance after one year?

A. $10

B. $100

C. $110

D. $1,000

BACKWARD B1 · concept review — Interest on interest

Question 2 of 5 · Learn and Apply

LEARN

With compound interest, the rate applies to the whole current balance, including interest already earned.

$100 earns 10% interest and grows to $110 after year one. In year two, the $110 earns 10% again. How much interest is earned in year two?

A. $10

B. $11

C. $21

D. $121

BACKWARD B1 · concept review — Interest on interest

Question 3 of 5 · Learn and Apply

LEARN

Simple interest: interest on the principal only, the same dollar amount each year. Compound interest: interest on the principal plus accumulated interest, growing each year.

Which statement describes COMPOUND interest?

A. Interest is earned only on the original deposit

B. Interest is paid only when the account is closed

C. Interest is earned on the principal and on interest already added

D. Interest is the same dollar amount every year, figured on the deposit

BACKWARD B1 · concept review — Interest on interest

Question 4 of 5 · Learn and Apply

LEARN

Increasing an amount by r% is the same as multiplying it by (1 + r), with r as a decimal. Adding 5% means multiplying by 1.05.

Multiplying by 1.05 is the same as adding what percent?

A. 0.05%

B. 5%

C. 50%

D. 105%

BACKWARD B1 · concept review — Interest on interest

Question 5 of 5 · Knowledge Check

Which expression gives $800 after 3 years at 5% compounded annually?

A. 800(1.05)^3

B. 800 × 0.05 × 3

C. 800 + 1.05 × 3

D. 800(0.05)^3

GO DEEPER 1 — Reading an exponential growth model

Question 1 of 5 · Learn and Apply

LEARN

In A = P(1 + r)^t, P is the starting amount and (1 + r) is the growth factor per period. A factor of 1.05 means each year's balance is 105% of the year before, a 5% increase.

An account balance is modeled by A = 1,500(1.05)^t, where t is years. What does 1.05 tell you?

A. The balance grows $1.05 each year

B. The balance grows 105% each year

C. The account pays a $1,500 bonus every 5 years

D. The balance grows 5% each year

GO DEEPER 1 — Reading an exponential growth model

Question 2 of 5 · Learn and Apply

LEARN

In an exponential model A = P(1 + r)^t, the value when t = 0 is P, because any number raised to the power 0 equals 1.

In A = 1,500(1.05)^t, what does 1,500 represent?

A. The interest earned each year

B. The balance after 5 years

C. The maximum balance allowed

D. The starting balance

GO DEEPER 1 — Reading an exponential growth model

Question 3 of 5 · Knowledge Check

Using A = 1,500(1.05)^t, what is the balance after 4 years (nearest cent)?

A. $1,575.00

B. $1,736.44

C. $1,800.00

D. $1,823.26

GO DEEPER 1 — Reading an exponential growth model

Question 4 of 5 · Knowledge Check

Which model shows a balance that starts at $600 and grows 3% per year?

A. A = 600(1.03)^t

B. A = 600(0.03)^t

C. A = 600 + 1.03t

D. A = 3(600)^t

GO DEEPER 1 — Reading an exponential growth model

Question 5 of 5 · Knowledge Check

A savings balance doubled from $800 to $1,600 over some years. Which type of growth model fits a fixed annual compound rate?

A. Linear: the balance adds the same number of dollars every single year

B. Quadratic: the balance follows a parabola

C. Exponential: the balance multiplies by the same factor each year

D. Constant: the balance never changes

GO DEEPER 2 — Working backward: present value

Question 1 of 5 · Learn and Apply

LEARN

Present value is how much money today grows to a target amount later. Solve A = P(1 + r)^t for P: P = A ÷ (1 + r)^t.

Kim wants $10,000 in 5 years. Her account earns 5% compounded annually. How much must she deposit today (nearest cent)?

A. $7,500.00

B. $7,835.26

C. $9,500.00

D. $12,762.82

GO DEEPER 2 — Working backward: present value

Question 2 of 5 · Learn and Apply

LEARN

To find the deposit needed today, divide the future amount by the growth factor raised to the number of years: P = A ÷ (1 + r)^t.

Which expression gives the deposit needed today to have $5,000 in 3 years at 4% compounded annually?

A. 5,000 × (1.04)^3

B. 5,000 − 0.04 × 3

C. 5,000 ÷ (1.04)^3

D. 5,000 ÷ (0.04)^3

GO DEEPER 2 — Working backward: present value

Question 3 of 5 · Learn and Apply

LEARN

Money deposited today earns interest, and the interest compounds, so a smaller amount today can grow into a larger amount later.

Why is the deposit needed today SMALLER than the future goal?

A. Banks add a bonus to every goal

B. Inflation automatically adds extra money to savings accounts each year

C. The goal amount shrinks every year

D. Interest will make up the difference over time

GO DEEPER 2 — Working backward: present value

Question 4 of 5 · Learn and Apply

LEARN

In P = A ÷ (1 + r)^t, a higher rate makes the denominator larger.

If the rate were higher than 5%, how would the deposit needed today for a $10,000 goal in 5 years change?

A. It would be smaller

B. It would be larger

C. It would stay the same

D. It would equal $10,000

GO DEEPER 2 — Working backward: present value

Question 5 of 5 · Knowledge Check

Jay can deposit $4,000 today at 6% compounded annually. Will he reach $5,000 within 4 years?

A. Yes; 4,000(1.06)^4 ≈ $5,049.91

B. No; 4,000(1.06)^4 ≈ $4,960

C. No; he will have exactly $4,960

D. Yes; he will have $5,600

SET 25 · Saving, Emergency Funds, and Interest

Compounding frequency and APY

MAIN skill: Calculate balances with monthly, quarterly, or daily compounding and use APY to compare accounts

Outcome FL.SAVE.25 · National topic: Saving · NJSLS 9.1.12: FI, PB

Learning target: Compare savings options using APY and compounding

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Rates per year and per period (5 questions)
  - Why: Compounding-frequency problems require splitting an annual rate into a per-period rate.
- B2 · Math link → ALG1-S16-M (Algebra 1 HSA-SSE.B.3.c): Use the properties of exponents to transform exponential expressions
  - Why: Rewriting an annual rate as a monthly factor uses exponent properties.
- B3 · Math link → ALG1-S46-M (Algebra 1 HSF-IF.C.8.b): Use the properties of exponents to interpret growth and decay rates
  - Why: APY compares yearly growth factors from different compounding periods.
- B4 · Math link → G6-S20-M (Grade 6 6.NS.B.3): Divide multi-digit decimals
  - Why: Periodic rates divide the annual rate by the number of periods.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: How much does compounding frequency matter? (5 questions)

Practical skills beyond the standards: Evaluating promotional savings rates

Content status: stable

MAIN — Calculate balances with monthly, quarterly, or daily compounding and use APY to compare accounts

Question 1 of 5 · Learn and Apply

LEARN

When interest compounds n times per year, each period uses the rate r/n, and there are n·t periods: A = P(1 + r/n)^(nt). Monthly: n = 12. Quarterly: n = 4. Daily: n = 365.

$1,000 is deposited at 6% annual interest compounded monthly. What is the balance after 1 year (nearest cent)?

A. $1,005.00

B. $1,060.00

C. $1,061.68

D. $2,012.20

MAIN — Calculate balances with monthly, quarterly, or daily compounding and use APY to compare accounts

Question 2 of 5 · Learn and Apply

LEARN

APY (annual percentage yield) is the actual percent growth in one year including compounding: APY = (1 + r/n)^n − 1. Banks must show APY so savers can compare accounts with different compounding.

An account pays 6% compounded monthly. What is its APY (nearest hundredth of a percent)?

A. 0.50%

B. 6.00%

C. 6.17%

D. 72.00%

MAIN — Calculate balances with monthly, quarterly, or daily compounding and use APY to compare accounts

Question 3 of 5 · Learn and Apply

LEARN

A slightly lower rate compounded more often can produce a higher yield. Compare accounts by APY, not by the stated rate.

Account A pays 4.9% compounded daily. Account B pays 5.0% compounded once a year. Which earns more in a year?

A. Account B, because 5.0% is higher than 4.9%

B. They earn exactly the same

C. Account A: its APY is about 5.02%

D. Account B, because daily compounding lowers the yield

MAIN — Calculate balances with monthly, quarterly, or daily compounding and use APY to compare accounts

Question 4 of 5 · Knowledge Check

$2,000 earns 4% annual interest compounded quarterly for 2 years. What is the balance (nearest cent)?

A. $2,020.00

B. $2,160.00

C. $2,163.20

D. $2,165.71

MAIN — Calculate balances with monthly, quarterly, or daily compounding and use APY to compare accounts

Question 5 of 5 · Knowledge Check

In A = P(1 + r/n)^(nt), what is n for interest compounded quarterly?

A. 0.25

B. 3

C. 4

D. 12

BACKWARD B1 · concept review — Rates per year and per period

Question 1 of 5 · Learn and Apply

LEARN

A stated annual rate is split evenly across compounding periods: periodic rate = annual rate ÷ number of periods per year.

An annual rate of 6% is compounded monthly. What rate applies each month?

A. 0.5%

B. 2%

C. 6%

D. 72%

BACKWARD B1 · concept review — Rates per year and per period

Question 2 of 5 · Learn and Apply

LEARN

Quarterly means four periods per year: periodic rate = annual rate ÷ 4.

An annual rate of 8% is compounded quarterly. What is the quarterly rate?

A. 0.67%

B. 2%

C. 8%

D. 32%

BACKWARD B1 · concept review — Rates per year and per period

Question 3 of 5 · Learn and Apply

LEARN

Total periods = periods per year × years.

How many compounding periods are in 3 years of monthly compounding?

A. 3

B. 12

C. 15

D. 36

BACKWARD B1 · concept review — Rates per year and per period

Question 4 of 5 · Learn and Apply

LEARN

To write a percent as a decimal, divide by 100.

Write 0.5% as a decimal.

A. 0.005

B. 0.05

C. 0.5

D. 5

BACKWARD B1 · concept review — Rates per year and per period

Question 5 of 5 · Knowledge Check

Which compounds MORE often: daily or monthly?

A. Monthly

B. They are the same

C. Neither compounds

D. Daily

GO DEEPER 1 — How much does compounding frequency matter?

Question 1 of 5 · Learn and Apply

LEARN

Compounding more often adds a little more interest, because interest starts earning interest sooner. The gain from annual to monthly is noticeable; from monthly to daily it is tiny.

$10,000 earns 5% for one year. Compounded annually, the balance is $10,500. Compounded monthly, it is about $10,511.62. Compounded daily, it is about $10,512.67. What pattern do these show?

A. Daily compounding doubles the interest

B. Compounding frequency makes no difference at all to the year-end balance

C. More frequent compounding helps, but by smaller amounts each step

D. Monthly compounding earns less than annual

GO DEEPER 1 — How much does compounding frequency matter?

Question 2 of 5 · Learn and Apply

LEARN

A 1-percentage-point difference in rate changes yearly interest far more than switching between monthly and daily compounding.

Comparing savings accounts, which factor usually matters MORE than compounding frequency?

A. The interest rate itself

B. Whether interest compounds daily or monthly

C. The number of branches in other states

D. The day of the month interest posts

GO DEEPER 1 — How much does compounding frequency matter?

Question 3 of 5 · Learn and Apply

LEARN

At annual compounding, one year of interest is principal × rate.

How much more does $10,000 earn in one year at 5% compounded annually than at 4% compounded annually?

A. $1

B. $10

C. $100

D. $1,000

GO DEEPER 1 — How much does compounding frequency matter?

Question 4 of 5 · Learn and Apply

LEARN

APY already includes the effect of compounding, so the higher APY earns more, whatever the compounding frequency.

A bank advertises 4.88% APY compounded daily. Another advertises 4.90% APY compounded monthly. Which pays more?

A. The 4.88% APY account, because daily compounding is better

B. They pay exactly the same

C. It cannot be determined from APY

D. The 4.90% APY account

GO DEEPER 1 — How much does compounding frequency matter?

Question 5 of 5 · Learn and Apply

LEARN

Fees subtract from what an account earns. On small balances, a monthly fee can wipe out most of the interest.

An account with a $5 monthly fee pays 4.50% APY. About how much does $2,000 earn in a year after fees?

A. $30

B. $60

C. $90

D. $150

GO DEEPER 2 — Promotional and variable rates

Question 1 of 5 · Learn and Apply

LEARN

A promotional ("teaser") rate applies only for a limited time, then drops to the regular rate. Estimate interest for each period separately.

A bank offers 5.25% APY for the first 3 months, then the regular 1.00% APY. On $4,000, about how much interest is earned in the first year (simple estimate by period)?

A. $40.00

B. $52.50

C. $82.50

D. $210.00

GO DEEPER 2 — Promotional and variable rates

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Promotional rates are advertised prominently, but the rate after the promotion decides what you earn over a longer time.

Which question should Ana ask about a "limited-time" savings rate?

A. Is the rate higher than my checking account's?

B. Can I open the account online?

C. What rate applies after the promotion ends?

D. Is this rate guaranteed for as long as I keep the account?

GO DEEPER 2 — Promotional and variable rates

Question 3 of 5 · Learn and Apply

LEARN

When a rate changes partway through the year, figure the interest for each part of the year separately.

A savings account's variable rate drops from 4% to 3% after six months. On $6,000, about how much interest is earned that year?

A. $180

B. $210

C. $240

D. $420

GO DEEPER 2 — Promotional and variable rates

Question 4 of 5 · Learn and Apply

LEARN

Savings rates tend to follow market interest rates, which change with economic conditions and Federal Reserve policy.

Why might a bank lower its savings rate?

A. Market interest rates fell

B. A customer deposited too much

C. The account was opened online

D. Federal law requires yearly cuts

GO DEEPER 2 — Promotional and variable rates

Question 5 of 5 · Learn and Apply

LEARN

Savings products differ: regular savings and money market accounts usually have variable rates that can change at any time; a certificate of deposit (CD) usually keeps a fixed rate until it matures, in exchange for leaving the money in place.

Which product LOCKS a savings rate for a set term?

A. A regular savings account

B. A money market account

C. A checking account

D. A certificate of deposit

SET 26 · Saving, Emergency Funds, and Interest

Time, doubling, and the Rule of 72

MAIN skill: Estimate doubling time with the Rule of 72 and explain why starting early matters

Outcome FL.SAVE.26 · National topic: Saving · NJSLS 9.1.12: PB, FP

Learning target: Explain how time and compounding affect savings growth

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Doubling and repeated doubling (5 questions)
  - Why: Doubling-time reasoning depends on understanding repeated multiplication by 2.
- B2 · Math link → ALG1-S50-M (Algebra 1 HSF-BF.A.2): Write arithmetic and geometric sequences recursively and with an explicit formula
  - Why: Repeated doubling is a geometric sequence.
- B3 · Math link → ALG1-S57-M (Algebra 1 HSF-LE.A.3): Observe that exponential growth eventually exceeds linear, quadratic, and polynomial growth
  - Why: Compound growth eventually outpaces steady additions.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Starting early (5 questions)
- Go Deeper 2: The cost of waiting (5 questions)

Practical skills beyond the standards: Rule of 72 estimates

Content status: stable

MAIN — Estimate doubling time with the Rule of 72 and explain why starting early matters

Question 1 of 5 · Learn and Apply

LEARN

The Rule of 72 is a quick estimate: years to double ≈ 72 ÷ (annual interest rate as a percent). It works best for rates between about 4% and 12% and gives an approximation, not an exact answer.

Using the Rule of 72, about how long does it take money to double at 6% compounded annually?

A. 12 years

B. 6 years

C. 16.7 years

D. 4.3 years

MAIN — Estimate doubling time with the Rule of 72 and explain why starting early matters

Question 2 of 5 · Learn and Apply

LEARN

The Rule of 72 also works backward: rate ≈ 72 ÷ years to double.

About what annual rate would double money in 9 years, by the Rule of 72?

A. 0.125%

B. 8%

C. 9%

D. 81%

MAIN — Estimate doubling time with the Rule of 72 and explain why starting early matters

Question 3 of 5 · Learn and Apply

LEARN

Compound growth speeds up over time because each year's growth is a percent of a larger balance. The last decade can add more than all the earlier decades combined.

$5,000 grows at 7% compounded annually. How much MORE does it grow to after 40 years than after 30 years (nearest dollar)?

A. $3,500

B. $36,811

C. $38,061

D. $74,872

MAIN — Estimate doubling time with the Rule of 72 and explain why starting early matters

Question 4 of 5 · Learn and Apply

LEARN

Each "doubling period" multiplies the balance by 2. Count the doubling periods in the time span, then double that many times.

Use the Rule of 72 to estimate what $1,000 grows to in 36 years at 8% compounded annually.

A. About $8,000

B. About $3,880

C. About $4,000

D. About $16,000

MAIN — Estimate doubling time with the Rule of 72 and explain why starting early matters

Question 5 of 5 · Knowledge Check

Why is the Rule of 72 called an estimate?

A. It only works for simple interest

B. It gives the exact answer for every interest rate and every time period

C. It approximates the exact compound-interest result

D. It is a legal limit on interest rates

BACKWARD B1 · concept review — Doubling and repeated doubling

Question 1 of 5 · Learn and Apply

LEARN

To double means to multiply by 2.

$500 doubles once. What is the new amount?

A. $250

B. $502

C. $1,000

D. $2,500

BACKWARD B1 · concept review — Doubling and repeated doubling

Question 2 of 5 · Learn and Apply

LEARN

Doubling three times multiplies by 2 × 2 × 2 = 2^3 = 8.

$500 doubles three times. What is the final amount?

A. $1,500

B. $2,000

C. $3,000

D. $4,000

BACKWARD B1 · concept review — Doubling and repeated doubling

Question 3 of 5 · Learn and Apply

LEARN

Number of doublings = total years ÷ years per doubling.

If money doubles every 10 years, how many times does it double in 30 years?

A. 30 times

B. 10 times

C. 3 times

D. 2 times

BACKWARD B1 · concept review — Doubling and repeated doubling

Question 4 of 5 · Learn and Apply

LEARN

Steady additions grow by the same dollar amount each year (linear growth). Doubling multiplies the amount (exponential growth). Exponential growth starts slowly but eventually passes linear growth.

Starting with $100, which is larger after 30 years: adding $100 each year, or doubling every 10 years?

A. Adding $100 a year: $3,100 vs $800

B. Doubling every 10 years: $800 vs $3,100

C. They are equal at $3,100

D. Doubling every 10 years: $3,200 vs $3,100

BACKWARD B1 · concept review — Doubling and repeated doubling

Question 5 of 5 · Knowledge Check

Which statement about compound growth is TRUE?

A. Growth is fastest in the first year

B. Growth is the same number of dollars every year

C. Growth stops after 10 years

D. Growth is faster in later years because the balance is larger

GO DEEPER 1 — Starting early

Question 1 of 5 · Learn and Apply

LEARN

Starting early gives money more years to compound. Someone who saves for a few early years can end up with more than someone who saves much longer but starts later. (These examples assume a steady 7% return; real investment returns vary and are not guaranteed.)

Saver A invests $2,000 a year from age 25 to 34 (10 years), then stops. Saver B invests $2,000 a year from 35 to 64 (30 years). Both earn 7% a year. By 65, A has about $210,000 and B about $189,000. How much did each CONTRIBUTE?

A. A: $210,000; B: $189,000

B. A: $60,000; B: $20,000

C. Both: $40,000

D. A: $20,000; B: $60,000

GO DEEPER 1 — Starting early

Question 2 of 5 · Learn and Apply

LEARN

Compounding rewards time. Money invested earlier has more years for its earnings to earn more.

Saver A contributed $20,000 and ended with about $210,000. Saver B contributed $60,000 and ended with about $189,000. Why did A end with more?

A. A earned a higher rate

B. B paid higher taxes

C. A's money had more years to compound

D. A contributed more money in total than B did

GO DEEPER 1 — Starting early

Question 3 of 5 · Knowledge Check

Saver A contributed $20,000 and ended with about $210,000. About how much of A's $210,000 came from growth rather than contributions?

A. About $190,000

B. About $20,000

C. About $210,000

D. About $230,000

GO DEEPER 1 — Starting early

Question 4 of 5 · Learn and Apply

LEARN

At about 7%, money doubles roughly every 72 ÷ 7 ≈ 10.3 years.

A 17-year-old with a summer job wonders whether saving $500 now matters. At 7% a year, about what does $500 grow to in 48 years (nearest hundred, using the Rule of 72)?

A. About $13,000

B. About $500

C. About $2,180

D. About $4,000

GO DEEPER 1 — Starting early

Question 5 of 5 · Knowledge Check

Which assumption in "start early" examples should a careful reader remember?

A. Returns are guaranteed by the government

B. Every year earns exactly 7%, so results are certain

C. Starting early never matters

D. Real investment returns vary and are not guaranteed

GO DEEPER 2 — The cost of waiting

Question 1 of 5 · Learn and Apply

LEARN

Years to double ≈ 72 ÷ rate. Number of doublings = years invested ÷ years per doubling.

$1,000 invested at 6% for 36 years doubles about how many times (Rule of 72)?

A. 6 times

B. 2 times

C. 3 times

D. 12 times

GO DEEPER 2 — The cost of waiting

Question 2 of 5 · Learn and Apply

LEARN

At a given rate, one fewer doubling period at the end means one fewer doubling: the final balance is about half as large.

$1,000 invested at 6% doubles about every 12 years. Waiting 12 years to invest it, with a fixed retirement date, means ending with about…

A. the same amount

B. twice as much

C. half as much

D. 12% less

GO DEEPER 2 — The cost of waiting

Question 3 of 5 · Knowledge Check

$1,000 grows at 6% for 36 years to about $8,000. If Jen invests the $1,000 at 6% but waits 12 years, so it grows for 24 years, about how much will she have?

A. About $8,000

B. About $2,000

C. About $7,000

D. About $4,000

GO DEEPER 2 — The cost of waiting

Question 4 of 5 · Learn and Apply

LEARN

Savers cannot control market returns, inflation, or interest rates. They can control when they start, how much they save, and how consistently they save.

Which factor does a young saver control MOST?

A. How early and how consistently they save

B. The stock market's yearly return

C. The inflation rate

D. Interest rates set by the Federal Reserve

GO DEEPER 2 — The cost of waiting

Question 5 of 5 · Knowledge Check

Two friends each save $100 a month. One starts at 22, the other at 32. Both stop at 65 and earn the same rate. Which statement is TRUE?

A. The earlier saver will very likely end with much more

B. They will end with the same amount

C. The later saver will end with more

D. Saving monthly removes the effect of starting time completely

SET 27 · Saving, Emergency Funds, and Interest

Savings options: high-yield savings, CDs, and money market accounts

MAIN skill: Choose a savings product by safety, liquidity, and return

Outcome FL.SAVE.27 · National topic: Saving · NJSLS 9.1.12: FI

Learning target: Compare savings products: CDs, money market accounts, and Treasury securities

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Liquidity: how quickly money can be used (5 questions)
  - Why: Choosing a savings product depends on trading access (liquidity) against return.
- B2 · Math link → G7-S10-M (Grade 7 7.RP.A.3): Find simple interest
  - Why: CD interest and penalties use simple interest over part of a year.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: CD ladders (5 questions)
- Go Deeper 2: U.S. Treasury savings options (5 questions)

Practical skills beyond the standards: Building a CD ladder; Buying Treasuries on TreasuryDirect

Content status: time-sensitive

Source: FDIC — Deposit insurance covers deposit products such as CDs and money market deposit accounts; it does not cover money market mutual funds or other investments.
https://www.fdic.gov/resources/deposit-insurance/understanding-deposit-insurance

Source: TreasuryDirect (U.S. Department of the Treasury) — I bonds must be held at least 12 months; if cashed before 5 years, the last 3 months of interest are lost; Treasury bills are sold at a discount and pay face value at maturity.
https://www.treasurydirect.gov/savings-bonds/i-bonds/

MAIN — Choose a savings product by safety, liquidity, and return

Question 1 of 5 · Learn and Apply

LEARN

A certificate of deposit (CD) is a bank or credit union deposit that you agree to leave for a set term, such as 6 months or 5 years. In return, it usually pays a fixed rate. Taking money out before the term ends usually costs an early-withdrawal penalty. CDs are insured deposits up to the legal limit.

What is a certificate of deposit (CD)?

A. A stock that pays the same fixed dividend to owners every month

B. A checking account with free checks

C. A loan that a bank gives to students

D. A deposit left for a set term at a usually fixed rate

MAIN — Choose a savings product by safety, liquidity, and return

Question 2 of 5 · Learn and Apply

LEARN

Early-withdrawal penalties are often stated as a number of days or months of interest. Penalty ≈ principal × rate × (days ÷ 365).

Max's $5,000 CD pays 4.5% simple interest. The penalty for early withdrawal is 90 days of interest. About how much is the penalty (use 365 days in a year)?

A. $4.50

B. $18.49

C. $55.48

D. $225.00

MAIN — Choose a savings product by safety, liquidity, and return

Question 3 of 5 · Learn and Apply

LEARN

A money market deposit account is a bank deposit, insured up to the legal limit. A money market fund is a mutual fund that invests in short-term debt. It aims to keep a stable value but is not FDIC insured and can, rarely, lose value.

Which statement about a money market DEPOSIT account (at a bank) and a money market FUND (at a brokerage) is TRUE?

A. Both are FDIC insured

B. Only the fund is FDIC insured

C. Only the deposit account is FDIC insured

D. Neither can ever lose value, because both are offered by banks

MAIN — Choose a savings product by safety, liquidity, and return

Question 4 of 5 · Learn and Apply

LEARN

Match the product to when you need the money. Money needed on a known date can go in a CD whose term ends by that date. Money you may need any time belongs in a savings account.

Lily will need $3,000 for college fees in exactly 12 months, and she will not touch it before then. Which choice fits best?

A. A 5-year CD with a large early-withdrawal penalty

B. A stock fund, for the highest possible return

C. Her checking account, which pays no interest

D. A 12-month CD at an insured bank

MAIN — Choose a savings product by safety, liquidity, and return

Question 5 of 5 · Knowledge Check

Which choice keeps emergency money BOTH safe and quickly available?

A. A 3-year CD that charges an early-withdrawal penalty

B. A collectible card collection

C. A high-yield savings account at an insured bank

D. A stock index fund

BACKWARD B1 · concept review — Liquidity: how quickly money can be used

Question 1 of 5 · Learn and Apply

LEARN

Liquidity describes how easily and quickly something can be turned into cash you can spend, without losing value. Cash and checking are very liquid; a house is not.

What does "liquidity" mean in personal finance?

A. How quickly money can be used without losing value

B. How much interest an account pays each year, as a percent

C. How much water a bank uses

D. How large an account balance is

BACKWARD B1 · concept review — Liquidity: how quickly money can be used

Question 2 of 5 · Learn and Apply

LEARN

Checking account money can be spent today. Selling a house or car, or ending a CD early, takes time or costs money.

Which is MOST liquid?

A. A house

B. A 5-year certificate of deposit

C. Money in a checking account

D. A car

BACKWARD B1 · concept review — Liquidity: how quickly money can be used

Question 3 of 5 · Learn and Apply

LEARN

Savers usually earn more for accepting less liquidity, such as locking money in a CD for a longer term.

Why do longer-term CDs often pay higher rates than savings accounts?

A. They are not insured

B. Banks are required to pay more on CDs by law

C. CD rates change every day

D. You give up access to the money for longer

BACKWARD B1 · concept review — Liquidity: how quickly money can be used

Question 4 of 5 · Knowledge Check

Which money should be kept the MOST liquid?

A. An emergency fund

B. Savings for retirement in 40 years

C. A college fund for a newborn

D. Money for a house in 10 years

BACKWARD B1 · concept review — Liquidity: how quickly money can be used

Question 5 of 5 · Knowledge Check

A 2-year CD pays 4%; a savings account pays 3.5%. On $1,000 for one year, about how much more does the CD earn?

A. $0.50

B. $5

C. $40

D. $75

GO DEEPER 1 — CD ladders

Question 1 of 5 · Learn and Apply

LEARN

A CD ladder spreads money across CDs with different maturity dates. One CD matures each year, giving regular access to part of the money, and maturing CDs can be reinvested at current rates.

Rosa splits $4,000 into four CDs of $1,000 each, maturing in 1, 2, 3, and 4 years. What is this strategy called?

A. A CD ladder

B. A CD pyramid scheme

C. A savings sweep

D. A money market account

GO DEEPER 1 — CD ladders

Question 2 of 5 · Learn and Apply

LEARN

In a CD ladder, one CD (one "rung") matures each year.

In a 4-rung ladder of $1,000 CDs maturing in years 1–4, how much becomes available each year?

A. $0

B. $250

C. $1,000

D. $4,000

GO DEEPER 1 — CD ladders

Question 3 of 5 · Knowledge Check

Rosa's ladder pays 3.8%, 4.0%, 4.1%, and 4.2% on $1,000 each. What is the total interest in the first year (simple interest)?

A. $40.25

B. $152

C. $161

D. $168

GO DEEPER 1 — CD ladders

Question 4 of 5 · Knowledge Check

Why might a ladder be better than putting all $4,000 in one 4-year CD?

A. A ladder always pays the highest possible rate on every single dollar

B. A ladder has no insurance

C. Part of the money becomes available every year without penalty

D. A ladder avoids all taxes

GO DEEPER 1 — CD ladders

Question 5 of 5 · Knowledge Check

When the 1-year CD matures, rates have risen. What does a typical ladder strategy do?

A. Withdraw it and close the ladder

B. Reinvest it for 1 year only, forever

C. Break the other CDs early so all the money can be reinvested

D. Reinvest it in a new 4-year CD at the higher rate

GO DEEPER 2 — U.S. Treasury savings options

Question 1 of 5 · Learn and Apply

LEARN

Treasury bills are short-term loans to the U.S. government. They are sold at a discount, a price below face value, and pay the full face value at maturity. The difference is the earnings. Treasury securities are backed by the U.S. government.

A $1,000 Treasury bill (T-bill) is bought for $975 and pays $1,000 when it matures. How much does the buyer earn?

A. $2.50

B. $25

C. $975

D. $1,000

GO DEEPER 2 — U.S. Treasury savings options

Question 2 of 5 · Learn and Apply

LEARN

The return as a percent of what you paid = earnings ÷ price × 100.

A T-bill bought for $975 pays $1,000 at maturity, earning $25. What percent of the purchase price is that (nearest hundredth)?

A. 2.50%

B. 2.56%

C. 25.00%

D. 97.50%

GO DEEPER 2 — U.S. Treasury savings options

Question 3 of 5 · Learn and Apply

LEARN

I bonds are U.S. savings bonds whose rate includes an inflation adjustment that changes every six months. They must be held at least 12 months, and cashing them in before 5 years costs the last 3 months of interest.

Series I savings bonds have a rate that adjusts with inflation. What is the main purpose of that feature?

A. To help savings keep up with rising prices

B. To guarantee the bond doubles in value every single year

C. To make the bond a stock investment

D. To avoid any holding period

GO DEEPER 2 — U.S. Treasury savings options

Question 4 of 5 · Learn and Apply

LEARN

I bond rules: they cannot be cashed during the first 12 months, and cashing them in before 5 years forfeits the last 3 months of interest.

Under the rules described for I bonds, what happens if one is cashed after 2 years?

A. All interest is lost

B. Nothing; there is never a penalty

C. The last 3 months of interest are lost

D. It cannot be cashed until it reaches its 30-year final maturity

GO DEEPER 2 — U.S. Treasury savings options

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Individuals can buy Treasury bills, notes, bonds, and savings bonds directly from the U.S. Treasury on its TreasuryDirect website, or through a bank or broker.

Where can individuals buy Treasury securities directly from the government?

A. Any social media marketplace

B. A bank's certificate of deposit counter only

C. The FDIC's website

D. TreasuryDirect.gov

SET 28 · Interest, Borrowing, and Debt

Borrowing basics: principal, interest, term, and collateral

MAIN skill: Explain the parts of a loan and compare secured and unsecured borrowing

Outcome FL.DEBT.28 · National topic: Managing Credit · NJSLS 9.1.12: CDM

Learning target: Explain the costs and benefits of borrowing and the parts of a loan

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Principal versus interest (5 questions)
  - Why: Every loan question depends on separating the amount borrowed from the cost of borrowing.
- B2 · Math link → G6-S17-M (Grade 6 6.NS.B.3): Subtract multi-digit decimals
  - Why: Interest is the difference between the total repaid and the principal.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Cosigning and shared responsibility (5 questions)
- Go Deeper 2: Is this loan worth it? (5 questions)

Practical skills beyond the standards: Cosigning risks

Content status: stable

MAIN — Explain the parts of a loan and compare secured and unsecured borrowing

Question 1 of 5 · Learn and Apply

LEARN

Every loan has a principal (the amount borrowed), interest (the cost of borrowing), and a term (how long you have to repay). Total repaid = principal + interest (+ any fees).

Lena borrows $6,000 for 3 years and will repay $6,840 in total. Which amount is the PRINCIPAL?

A. $840

B. $2,280

C. $6,000

D. $6,840

MAIN — Explain the parts of a loan and compare secured and unsecured borrowing

Question 2 of 5 · Learn and Apply

LEARN

The cost of borrowing is everything you repay beyond the amount you borrowed.

For the same kind of loan, Lena borrows $6,000 and repays $6,840 in total over 3 years. What did borrowing cost her?

A. $280

B. $840

C. $6,000

D. $6,840

MAIN — Explain the parts of a loan and compare secured and unsecured borrowing

Question 3 of 5 · Learn and Apply

LEARN

Collateral is property a borrower pledges to a lender. A secured loan is backed by collateral (a car for an auto loan, a home for a mortgage); if the borrower does not repay, the lender can take it. An unsecured loan has no collateral, so lenders usually charge more.

Which loan is SECURED?

A. A credit card with no collateral

B. A personal loan approved based only on the borrower's income

C. A student loan with no collateral

D. An auto loan where the lender can repossess the car

MAIN — Explain the parts of a loan and compare secured and unsecured borrowing

Question 4 of 5 · Learn and Apply

LEARN

Interest rates reflect risk. When a lender cannot take property to recover a loan, it faces more risk of loss and usually charges a higher rate.

Why do unsecured loans usually have HIGHER interest rates than secured loans?

A. The lender has no collateral to take if unpaid

B. Unsecured loans are always larger

C. Unsecured loans are always for larger amounts

D. Unsecured lenders must pay extra taxes

MAIN — Explain the parts of a loan and compare secured and unsecured borrowing

Question 5 of 5 · Knowledge Check

Which choice is generally a BETTER use of borrowing?

A. A loan for a vacation that will be paid off over five years

B. A cash advance to buy concert tickets

C. A modest loan for training that raises future earnings

D. A loan to cover gambling losses

BACKWARD B1 · concept review — Principal versus interest

Question 1 of 5 · Learn and Apply

LEARN

Principal is the amount borrowed. Interest is the extra amount paid for borrowing. Total repaid = principal + interest.

Jay borrows $500 from a credit union and repays $530. Which is the INTEREST?

A. $30

B. $500

C. $530

D. $1,030

BACKWARD B1 · concept review — Principal versus interest

Question 2 of 5 · Learn and Apply

LEARN

Total repaid = principal + interest.

A loan has a principal of $2,000 and total interest of $240. What is the total repaid?

A. $240

B. $1,760

C. $2,000

D. $2,240

BACKWARD B1 · concept review — Principal versus interest

Question 3 of 5 · Learn and Apply

LEARN

The term of a loan is how long the borrower has to repay it, such as 36 months.

Which word means "the length of time to repay a loan"?

A. Term

B. Principal

C. Collateral

D. Interest

BACKWARD B1 · concept review — Principal versus interest

Question 4 of 5 · Knowledge Check

From a BORROWER'S point of view, what is interest?

A. Money the bank pays the borrower each month on the loan

B. Part of the amount borrowed

C. A government tax on loans

D. The price paid for using someone else's money

BACKWARD B1 · concept review — Principal versus interest

Question 5 of 5 · Knowledge Check

Two loans of $1,000 have the same term. Loan A costs $90 in interest; Loan B costs $150. Which is cheaper?

A. Loan B, because it charges more interest

B. They are equal because the principal is the same

C. Loan A

D. It cannot be told without knowing the lenders' names

GO DEEPER 1 — Cosigning and shared responsibility

Question 1 of 5 · Learn and Apply

LEARN

A cosigner signs a loan along with the borrower and promises to repay it if the borrower does not. The debt can appear on the cosigner's credit report, and late payments can hurt the cosigner's credit.

Maya's older brother asks her to cosign his car loan. What does cosigning mean?

A. Maya is only a reference with no responsibility

B. Maya becomes the owner of the car

C. Maya is legally responsible for the debt if he does not pay

D. Maya pays only if she later signs a second agreement to do so

GO DEEPER 1 — Cosigning and shared responsibility

Question 2 of 5 · Learn and Apply

LEARN

When a cosigned loan goes unpaid, the lender can collect from the cosigner, and the missed payments can be reported on the cosigner's credit report too.

Maya cosigned her brother's car loan. He misses three payments. What can happen to Maya?

A. Her credit can be harmed and the lender can ask her to pay

B. Nothing happens to her, because the car is in her brother's name

C. She automatically owns the car

D. Only her brother's credit is affected

GO DEEPER 1 — Cosigning and shared responsibility

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Financial counselors suggest cosigning only if you could and would repay the whole loan yourself.

Before cosigning, which question is MOST important for Maya to ask herself?

A. Will my brother be grateful to me for helping him out?

B. Will the loan show up only on my brother's credit report?

C. Can I remove my name later whenever I want?

D. Could I afford to make every payment myself?

GO DEEPER 1 — Cosigning and shared responsibility

Question 4 of 5 · Learn and Apply

LEARN

If the borrower stops paying, the lender can collect each scheduled payment from the cosigner.

A cosigned $15,000 loan has payments of $300 a month. If the borrower stops paying, how much would the cosigner owe over the next year?

A. $300

B. $1,500

C. $3,600

D. $15,000

GO DEEPER 1 — Cosigning and shared responsibility

Question 5 of 5 · Knowledge Check

What is a safer way for Maya to help her brother than cosigning?

A. Lend him her debit card PIN

B. Cosign two smaller loans for him instead of one large loan

C. Take out a cash advance for him

D. Help him build credit or save for a larger down payment

GO DEEPER 2 — Is this loan worth it?

Question 1 of 5 · Learn and Apply

LEARN

One way to judge a loan is to compare its total cost with the benefit it creates, such as higher income.

A $3,000 loan for a welding certificate costs $360 in interest. The certificate raises Dan's pay by $4 an hour for 2,000 hours a year. What is the extra pay in the first year?

A. $360

B. $3,000

C. $4,000

D. $8,000

GO DEEPER 2 — Is this loan worth it?

Question 2 of 5 · Learn and Apply

LEARN

When you borrow to pay for something, its true cost is the price plus the interest and fees.

A $2,000 vacation is paid with a 24% loan over 2 years, costing about $540 in interest. What is the trip's total cost?

A. $540

B. $2,000

C. $2,480

D. $2,540

GO DEEPER 2 — Is this loan worth it?

Question 3 of 5 · Knowledge Check

Which question best tests whether a purchase should be financed?

A. Is the monthly payment smaller than my current phone bill?

B. Does the store offer instant approval?

C. Will it be worth more than its total cost by payoff?

D. Will my friends think it is cool?

GO DEEPER 2 — Is this loan worth it?

Question 4 of 5 · Learn and Apply

LEARN

Advertisements often emphasize a low monthly payment. Multiply the payment by the number of payments to find the total.

A store says, "Only $49 a month!" for a $1,200 laptop over 36 months. What is the total paid?

A. $49

B. $1,200

C. $1,470

D. $1,764

GO DEEPER 2 — Is this loan worth it?

Question 5 of 5 · Knowledge Check

Which is generally the cheapest way to buy a $300 bike you need for work?

A. Saving for it over a few months and paying cash

B. Rent-to-own at $15 a week for a year

C. A payday loan

D. A credit card that is paid off slowly over three years

SET 29 · Interest, Borrowing, and Debt

APR and periodic interest rates

MAIN skill: Interpret APR and convert it to monthly and daily periodic rates

Outcome FL.DEBT.29 · National topic: Managing Credit · NJSLS 9.1.12: CDM

Learning target: Explain APR and how interest rates and fees affect the cost of credit

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Rates over different time periods (5 questions)
  Why: Students who confuse yearly and monthly rates overstate or understate interest by a factor of 12.
- B2 · Math link → G6-S20-M (Grade 6 6.NS.B.3): Divide multi-digit decimals
  Why: Periodic rates divide the APR by 12 or 365.
- B3 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Interest for a period is a percent of the balance.
- B4 · Math link → G7-S01-M (Grade 7 7.RP.A.1): Compute unit rates associated with ratios of fractions
  Why: A periodic rate is a rate per unit of time.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: APR versus APY and effective cost (5 questions)
- Go Deeper 2: Reading a loan disclosure (5 questions)

Practical skills beyond the standards: Reading a Truth in Lending disclosure

Content status: time-sensitive

Source: CFPB (Truth in Lending, Regulation Z) — Lenders must disclose the APR and finance charge; APR expresses the yearly cost of credit, including certain fees. https://www.consumerfinance.gov/rules-policy/regulations/1026/

MAIN — Interpret APR and convert it to monthly and daily periodic rates

Question 1 of 5 · Learn and Apply

LEARN

APR (annual percentage rate) is the yearly cost of credit, including the interest rate and certain fees, expressed as a percent. Lenders often charge interest each month using a periodic rate: monthly periodic rate = APR ÷ 12.

A loan has an APR of 18%. If interest is charged monthly, what is the monthly periodic rate?

A. 0.049%

B. 1.5%

C. 18%

D. 216%

MAIN — Interpret APR and convert it to monthly and daily periodic rates

Question 2 of 5 · Learn and Apply

LEARN

Many credit cards use a daily periodic rate = APR ÷ 365 (some use 360). Interest is figured each day on the balance.

A credit card has a 21.9% APR and charges interest daily. What is the daily periodic rate (use 365 days; nearest thousandth of a percent)?

A. 0.060%

B. 0.600%

C. 1.825%

D. 21.900%

MAIN — Interpret APR and convert it to monthly and daily periodic rates

Question 3 of 5 · Learn and Apply

LEARN

Comparing loans by interest rate alone can mislead, because fees add to the cost. APR includes the interest rate and certain fees, which makes it the better number for comparing loans of the same term.

Two $5,000 loans for one year: Loan A has a 9% interest rate plus a $150 fee; Loan B has a 10% interest rate and no fee. Which has the lower total cost?

A. Loan B: $500 vs $600

B. Loan A: $450 vs $500

C. They cost the same

D. Loan A, because 9% is lower

MAIN — Interpret APR and convert it to monthly and daily periodic rates

Question 4 of 5 · Learn and Apply

LEARN

Interest for one period = balance × periodic rate.

A $1,200 balance has a monthly periodic rate of 2%. How much interest is charged for one month?

A. $2.40

B. $24

C. $240

D. $288

MAIN — Interpret APR and convert it to monthly and daily periodic rates

Question 5 of 5 · Knowledge Check

Which statement about APR is TRUE?

A. It is the monthly payment amount

B. It is set by law, so it is the same at every lender

C. It states the yearly cost of credit as a percent

D. It is the amount still owed on the loan

BACKWARD B1 · concept review — Rates over different time periods

Question 1 of 5 · Learn and Apply

LEARN

A year has 12 months. A yearly rate spread evenly across months is the yearly rate ÷ 12.

A rate is "per year." How is it changed to a rate "per month"?

A. Multiply by 12

B. Divide by 52

C. Leave it the same

D. Divide by 12

BACKWARD B1 · concept review — Rates over different time periods

Question 2 of 5 · Learn and Apply

LEARN

Monthly rate = yearly rate ÷ 12.

A rate of 12% per year equals what rate per month?

A. 0.12%

B. 1%

C. 12%

D. 144%

BACKWARD B1 · concept review — Rates over different time periods

Question 3 of 5 · Learn and Apply

LEARN

Simple yearly rate = monthly rate × 12.

A monthly rate is 1.5%. What is the equivalent simple yearly rate?

A. 0.125%

B. 1.5%

C. 15%

D. 18%

BACKWARD B1 · concept review — Rates over different time periods

Question 4 of 5 · Learn and Apply

LEARN

To compare rates, put them in the same time unit first.

Which is LARGER: 2% per month or 20% per year?

A. 2% per month (24% per year)

B. 20% per year

C. They are equal

D. It cannot be compared

BACKWARD B1 · concept review — Rates over different time periods

Question 5 of 5 · Learn and Apply

LEARN

APR expresses the cost of credit for one full year as a percent, so loans can be compared on the same yearly basis.

What does the "A" in APR stand for?

A. Average

B. Adjusted

C. Approved

D. Annual

GO DEEPER 1 — APR versus APY and effective cost

Question 1 of 5 · Learn and Apply

LEARN

APR is a simple yearly rate: monthly rate × 12. If interest is added each month and then charged interest, the effective annual rate (like APY for savings) is higher: (1 + monthly rate)^12 − 1.

A loan charges 1.5% per month, compounded monthly. What is the effective annual rate (nearest tenth of a percent)?

A. 1.5%

B. 16.5%

C. 18.0%

D. 19.6%

GO DEEPER 1 — APR versus APY and effective cost

Question 2 of 5 · Learn and Apply

LEARN

For the same compounding, APY (or the effective annual rate) is higher than APR whenever interest compounds more than once a year. Federal rules require savings to show APY and loans to show APR.

Savings accounts advertise APY, while loans advertise APR. Why might a lender prefer to advertise APR?

A. APR is always higher than APY

B. APR includes all possible fees, making it look higher

C. APR leaves out compounding, so it looks lower

D. APR is used only for savings

GO DEEPER 1 — APR versus APY and effective cost

Question 3 of 5 · Learn and Apply

LEARN

With compounding, interest is charged on interest already added. The effective annual rate = (1 + APR ÷ n)^n − 1, where n is the number of compounding periods in a year.

A credit card has a 24% APR with daily compounding. Is the effective annual rate higher or lower than 24%?

A. Higher

B. Lower

C. Exactly 24%

D. It depends on the credit limit

GO DEEPER 1 — APR versus APY and effective cost

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

The APR of a loan includes the interest rate and certain fees, so loans with the same term can be compared by APR.

Which number should Ali use to compare two personal loans with the same term but different fees?

A. Only the advertised interest rate

B. Only the monthly payment, ignoring the term

C. The lender's customer rating

D. The APR of each loan

GO DEEPER 1 — APR versus APY and effective cost

Question 5 of 5 · Learn and Apply

LEARN

APR for a simple one-year loan ≈ (interest + fees) ÷ amount borrowed × 100.

A $1,000 loan for one year has a $50 fee and charges 5% interest. Roughly what is its APR?

A. 1.05%

B. 5%

C. 10%

D. 50%

GO DEEPER 2 — Reading a loan disclosure

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

The Truth in Lending Act requires lenders to show key terms before you sign: the APR, the finance charge (the dollar cost of credit), the amount financed, and the total of payments.

A Truth in Lending disclosure shows: Amount financed $8,000; Finance charge $1,620; Total of payments $9,620. What is the finance charge?

A. The full amount of money borrowed: $8,000

B. The total paid: $9,620

C. The dollar cost of the credit: $1,620

D. The monthly payment

GO DEEPER 2 — Reading a loan disclosure

Question 2 of 5 · Learn and Apply

LEARN

When payments are equal, each payment = total of payments ÷ number of payments.

A loan disclosure shows: Amount financed $8,000; Total of payments $9,620; 48 monthly payments. What is each payment (nearest cent)?

A. $33.75

B. $166.67

C. $200.42

D. $240.50

GO DEEPER 2 — Reading a loan disclosure

Question 3 of 5 · Learn and Apply

LEARN

Comparing the finance charge with the amount financed shows how much the credit costs relative to the amount borrowed.

Amount financed $8,000; finance charge $1,620. The finance charge is what percent of the amount financed (nearest tenth)?

A. 2.0%

B. 16.8%

C. 20.3%

D. 120.3%

GO DEEPER 2 — Reading a loan disclosure

Question 4 of 5 · Learn and Apply

LEARN

Federal law (the Truth in Lending Act) requires the disclosure so borrowers see the cost of credit in a standard form.

Why must lenders give this disclosure BEFORE you sign?

A. So you can compare offers and understand the cost

B. So the lender can raise the rate later without telling you

C. Because the IRS requires it for taxes

D. So you can skip reading the contract

GO DEEPER 2 — Reading a loan disclosure

Question 5 of 5 · Learn and Apply

LEARN

A Truth in Lending disclosure lists the APR, finance charge, amount financed, total of payments, and payment schedule.

Which disclosure item is the best single number for comparing loans with the same term?

A. Monthly payment

B. Amount financed

C. APR

D. Total of payments

SET 30 · Interest, Borrowing, and Debt

Installment loans: payments and total cost

MAIN skill: Use loan payments to find total cost, and compare loan terms

Outcome FL.DEBT.30 · National topic: Managing Credit · NJSLS 9.1.12: CDM

Learning target: Calculate the total cost of an installment loan and compare loan terms

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Payments add up to the total cost (5 questions)
  Why: Total-cost problems require multiplying payments by the number of payments and separating principal from interest.
- B2 · Math link → G5-S22-M (Grade 5 5.NBT.B.7): Solve real-world problems with decimal operations
  Why: Total cost multiplies a decimal payment by many months.
- B3 · Math link → G7-S25-M (Grade 7 7.NS.A.3): Solve real-world problems with the four operations on rational numbers
  Why: Comparing loans subtracts and multiplies money amounts.

MAIN — Use loan payments to find total cost, and compare loan terms

Question 1 of 5 · Learn and Apply

LEARN

An installment loan is repaid in equal scheduled payments, such as monthly car or personal loan payments. Total paid = payment × number of payments. Total interest = total paid − amount borrowed.

A $12,000 car loan at 6% APR for 5 years has a monthly payment of $231.99. What is the total of all payments?

A. $2,783.88

B. $12,000.00

C. $12,720.00

D. $13,919.40

MAIN — Use loan payments to find total cost, and compare loan terms

Question 2 of 5 · Knowledge Check

A $12,000 loan is repaid with 60 payments of $231.99. How much interest is paid in total?

A. $231.99

B. $720.00

C. $1,919.40

D. $13,919.40

MAIN — Use loan payments to find total cost, and compare loan terms

Question 3 of 5 · Learn and Apply

LEARN

A longer term lowers the monthly payment but usually raises the total interest, because the balance is outstanding longer.

$15,000 at 7% APR: a 36-month loan has payments of $463.16; a 72-month loan has payments of $255.74. How much MORE interest does the 72-month loan cost?

A. $207.42

B. $1,673.76

C. $1,739.52

D. $3,413.28

MAIN — Use loan payments to find total cost, and compare loan terms

Question 4 of 5 · Knowledge Check

A 72-month car loan costs more total interest than a 36-month loan for the same amount. Why might someone choose the 72-month loan anyway?

A. It always has a lower total cost because payments are smaller

B. It pays off the car sooner

C. It has no interest

D. Its lower monthly payment fits a tight budget

MAIN — Use loan payments to find total cost, and compare loan terms

Question 5 of 5 · Knowledge Check

Two loans have the same amount and term. Loan X has a 5% APR; Loan Y has an 8% APR. Which has the lower monthly payment?

A. Loan Y

B. They have equal payments

C. It depends on the down payment only

D. Loan X

BACKWARD B1 · concept review — Payments add up to the total cost

Question 1 of 5 · Learn and Apply

LEARN

Equal payments: total paid = payment × number of payments.

A loan has 24 payments of $100. What is the total of payments?

A. $100

B. $124

C. $240

D. $2,400

BACKWARD B1 · concept review — Payments add up to the total cost

Question 2 of 5 · Learn and Apply

LEARN

Interest = total paid − amount borrowed.

If a borrower took $2,000 and pays $2,400 in total, what was the interest?

A. $400

B. $2,000

C. $2,400

D. $4,400

BACKWARD B1 · concept review — Payments add up to the total cost

Question 3 of 5 · Learn and Apply

LEARN

Monthly payments over t years: 12 × t payments.

How many monthly payments are in a 5-year loan?

A. 5

B. 52

C. 60

D. 120

BACKWARD B1 · concept review — Payments add up to the total cost

Question 4 of 5 · Learn and Apply

LEARN

Spreading the same loan over more months makes each payment smaller.

Which term gives LOWER monthly payments for the same loan amount and rate?

A. A shorter term

B. Neither; terms do not affect payments

C. A longer term

D. A term with a higher APR

BACKWARD B1 · concept review — Payments add up to the total cost

Question 5 of 5 · Knowledge Check

A $600 phone is paid in 12 payments of $55. How much more than the price is paid?

A. $55

B. $60

C. $600

D. $660

GO DEEPER 1 — The loan payment formula

Question 1 of 5 · Learn and Apply

LEARN

The standard loan payment formula uses the monthly rate r = APR ÷ 12 (as a decimal) and the number of monthly payments n.

The monthly payment on a loan is M = P · r ÷ (1 − (1 + r)^(−n)), where r is the monthly rate and n is the number of payments. For $10,000 at 6% APR for 60 months, what is r?

A. 0.0001

B. 0.005

C. 0.06

D. 0.5

GO DEEPER 1 — The loan payment formula

Question 2 of 5 · Learn and Apply

LEARN

Evaluate the formula with a calculator: compute (1 + r)^(−n) first, then the denominator, then multiply P by r and divide.

Using M = P · r ÷ (1 − (1 + r)^(−n)) with P = $10,000, r = 0.005, and n = 60, what is the monthly payment (nearest cent)?

A. $50.00

B. $166.67

C. $193.33

D. $216.67

GO DEEPER 1 — The loan payment formula

Question 3 of 5 · Learn and Apply

LEARN

Total interest = payment × number of payments − amount borrowed.

An $8,000 loan at 5% APR for 48 months has a payment of $184.23. What is the total interest?

A. $184.23

B. $400.00

C. $843.04

D. $1,600.00

GO DEEPER 1 — The loan payment formula

Question 4 of 5 · Learn and Apply

LEARN

With no interest, payments simply divide the principal evenly: P ÷ n.

$5,000 at 10% APR for 24 months: the payment is $230.72. If the APR were 0%, what would the payment be (nearest cent)?

A. $208.33

B. $230.72

C. $250.00

D. $5,000.00

GO DEEPER 1 — The loan payment formula

Question 5 of 5 · Learn and Apply

LEARN

A quick check: a loan payment must be more than the principal divided by the number of payments, because interest is added.

A loan payment calculator shows $405.53 for $20,000 at 8% APR over 60 months. Which check shows the result is reasonable?

A. It is a bit more than $20,000 ÷ 60 = $333.33

B. It is less than $20,000 ÷ 60

C. It equals 8% of $20,000

D. It is exactly double $20,000 ÷ 60

GO DEEPER 2 — Shopping for an installment loan

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

Getting a loan offer from a bank or credit union before shopping gives you a benchmark. If the dealer offers a better rate, you can take it; if not, you have an alternative.

Before visiting a car dealer, Rosa gets a preapproved loan offer from her credit union. Why is this useful?

A. She can compare it with the dealer's financing offer

B. It locks the car's price

C. It guarantees the lowest possible rate at every dealer anywhere

D. It removes the need to read the contract

GO DEEPER 2 — Shopping for an installment loan

Question 2 of 5 · Learn and Apply

LEARN

Any monthly payment can be reached by stretching the term, which hides the extra interest. Negotiate the price first, then compare financing by APR and total cost.

A dealer says, "What monthly payment do you want?" What risk does focusing on the payment create?

A. The car gets cheaper

B. The APR must drop by law when the loan term gets longer

C. The term can be stretched, raising total interest

D. There is no risk

GO DEEPER 2 — Shopping for an installment loan

Question 3 of 5 · Learn and Apply

LEARN

To compare offers with different terms, compute each total of payments: payment × number of payments.

Offer 1: 4.9% APR for 48 months, payment $230. Offer 2: 6.9% APR for 60 months, payment $198. Which costs less in total?

A. Offer 2: $11,880 vs $11,040

B. Offer 2, because its payment is lower

C. They cost exactly the same

D. Offer 1: $11,040 vs $11,880

GO DEEPER 2 — Shopping for an installment loan

Question 4 of 5 · Learn and Apply

LEARN

Some loans charge a fee for paying them off early (a prepayment penalty). Choosing a loan without one lets you save interest by paying it down faster.

Which loan feature lets a borrower pay off early without a penalty?

A. A balloon payment

B. A variable rate

C. No prepayment penalty

D. An extended warranty on the car

GO DEEPER 2 — Shopping for an installment loan

Question 5 of 5 · Learn and Apply

LEARN

A balloon loan has small regular payments followed by a very large final payment. Borrowers who cannot pay the balloon may need to refinance or sell.

A loan has a "balloon payment." What does that mean?

A. A large lump sum is due at the end

B. Payments get smaller and smaller each month

C. The loan has no interest

D. The lender sends a gift

SET 31 · Interest, Borrowing, and Debt

How loan payments pay down a balance: amortization

MAIN skill: Split a loan payment into interest and principal and follow the balance

Outcome FL.DEBT.31 · National topic: Managing Credit · NJSLS 9.1.12: CDM

Learning target: Explain how loan payments are applied to interest and principal (amortization)

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Interest is charged on the balance still owed (5 questions)
  - Why: Amortization depends on recalculating interest on the remaining balance each month.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  - Why: Each month's interest is a percent of the remaining balance.
- B3 · Math link → G7-S29-M (Grade 7 7.EE.B.3): Solve multistep problems with positive and negative rational numbers in any form
  - Why: Amortization repeats multiply, subtract, and update steps.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Extra payments (5 questions)

Practical skills beyond the standards: Directing extra payments to principal

Content status: stable

MAIN — Split a loan payment into interest and principal and follow the balance

Question 1 of 5 · Learn and Apply

LEARN

Amortization is paying off a loan with regular payments. Each payment first covers that month's interest (balance × monthly rate); the rest reduces the principal. Early payments are mostly interest; later payments are mostly principal.

Dev has a $10,000 loan at 6% APR with a $193.33 monthly payment. How much of the FIRST payment is interest?

A. $50.00

B. $143.33

C. $193.33

D. $600.00

MAIN — Split a loan payment into interest and principal and follow the balance

Question 2 of 5 · Learn and Apply

LEARN

Principal paid = payment − interest. New balance = old balance − principal paid.

Dev's first payment of $193.33 includes $50.00 of interest. How much reduces the principal, and what is the new balance?

A. $193.33; $9,806.67

B. $50.00; $9,950.00

C. $143.33; $10,143.33

D. $143.33; $9,856.67

MAIN — Split a loan payment into interest and principal and follow the balance

Question 3 of 5 · Learn and Apply

LEARN

Each month, interest is charged on the balance that remains after the previous payment.

Dev's balance after one payment is $9,856.67 at 6% APR (0.5% per month). How much interest is in the SECOND payment (nearest cent)?

A. $48.57

B. $49.28

C. $50.00

D. $143.33

MAIN — Split a loan payment into interest and principal and follow the balance

Question 4 of 5 · Learn and Apply

LEARN

In an amortizing loan, each payment's interest is figured on a balance that keeps shrinking.

Over the life of an amortizing loan with equal payments, how does the INTEREST part of each payment change?

A. It gets larger over time

B. It stays the same every month

C. It gets smaller over time

D. It is zero until the last year

MAIN — Split a loan payment into interest and principal and follow the balance

Question 5 of 5 · Learn and Apply

LEARN

An amortization schedule lists each payment's interest part, principal part, and remaining balance. Interest is always figured on the balance still owed.

An amortization schedule shows payment 1: interest $50.00, principal $143.33. What will the LAST payment of the loan be mostly?

A. Principal

B. Interest

C. Fees

D. Taxes

BACKWARD B1 · concept review — Interest is charged on the balance still owed

Question 1 of 5 · Learn and Apply

LEARN

One month's interest = balance × monthly rate.

A $2,000 balance has a monthly rate of 1%. What is one month's interest?

A. $2

B. $20

C. $200

D. $2,020

BACKWARD B1 · concept review — Interest is charged on the balance still owed

Question 2 of 5 · Learn and Apply

LEARN

Interest is charged only on what you still owe.

After paying down the balance to $1,500, what is one month's interest at 1%?

A. $1.50

B. $15

C. $20

D. $150

BACKWARD B1 · concept review — Interest is charged on the balance still owed

Question 3 of 5 · Learn and Apply

LEARN

Payment = interest part + principal part.

A $100 payment includes $20 of interest. How much reduces the balance?

A. $20

B. $80

C. $100

D. $120

BACKWARD B1 · concept review — Interest is charged on the balance still owed

Question 4 of 5 · Knowledge Check

Which payment pays off a loan faster?

A. A smaller payment

B. Paying the same amount later in the month

C. Skipping a payment

D. A larger payment

BACKWARD B1 · concept review — Interest is charged on the balance still owed

Question 5 of 5 · Learn and Apply

LEARN

New balance = old balance + interest − payment.

What is the balance after a $500 balance gets $5 of interest and a $105 payment?

A. $390

B. $400

C. $500

D. $610

GO DEEPER 1 — Extra payments

Question 1 of 5 · Learn and Apply

LEARN

An extra payment goes straight to principal. That lowers the balance, so every later month's interest is a little smaller, and the loan ends sooner.

Dev adds $50 extra to principal in month 1 of his $10,000 loan at 0.5% per month. How much interest does this save in month 2?

A. $0.00

B. $0.25

C. $2.50

D. $50.00

GO DEEPER 1 — Extra payments

Question 2 of 5 · Learn and Apply

LEARN

Extra payments on principal reduce the balance faster than the schedule, so later payments carry less interest.

On an amortizing loan with no prepayment penalty, what happens to the loan when extra principal is paid each month?

A. It is paid off sooner, and total interest falls

B. The required monthly payment goes up automatically

C. The interest rate rises

D. Nothing changes

GO DEEPER 1 — Extra payments

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Some lenders apply extra money to future payments unless told otherwise. Telling them to apply it to principal reduces the balance right away.

When making an extra payment, what instruction should a borrower give the lender?

A. Apply it to next month's interest only

B. Hold it as a credit for fees

C. Refund it at the end of the year

D. Apply the extra amount to principal

GO DEEPER 1 — Extra payments

Question 4 of 5 · Knowledge Check

Dev rounds his $193.33 payment up to $200 each month. How much extra principal does he pay in a year?

A. $6.67

B. $80.04

C. $120.00

D. $2,400.00

GO DEEPER 1 — Extra payments

Question 5 of 5 · Learn and Apply

LEARN

The earlier principal is reduced, the more months of interest are avoided.

Which statement about extra payments is TRUE for most amortizing loans with no prepayment penalty?

A. Extra payments only help in the final year

B. Extra payments increase the total interest paid on the loan

C. Extra dollars paid early save more than late ones

D. Extra payments are not allowed

GO DEEPER 2 — Reading an amortization schedule

Question 1 of 5 · Learn and Apply

LEARN

Each row of an amortization schedule shows the payment, its interest part, its principal part, and the balance after the payment.

Row 12 of a schedule shows: payment $193.33, interest $44.22, principal $149.11, balance $8,694.98. How much of payment 12 reduced the debt?

A. $44.22

B. $149.11

C. $193.33

D. $8,694.98

GO DEEPER 2 — Reading an amortization schedule

Question 2 of 5 · Learn and Apply

LEARN

Balance before payment = balance after payment + principal part.

A schedule row shows: interest $44.22, principal $149.11, balance $8,694.98 after the payment. What was the balance before that payment?

A. $8,545.87

B. $8,738.20

C. $8,844.09

D. $8,888.31

GO DEEPER 2 — Reading an amortization schedule

Question 3 of 5 · Learn and Apply

LEARN

Monthly rate = interest for the month ÷ balance.

A schedule shows interest of $44.22 on a balance of $8,844.09 for one month. What monthly rate is that (nearest tenth of a percent)?

A. 0.05%

B. 0.5%

C. 5%

D. 6%

GO DEEPER 2 — Reading an amortization schedule

Question 4 of 5 · Learn and Apply

LEARN

Over the full life of a loan, the principal parts of all payments add up to the amount borrowed.

In a 60-payment schedule for $10,000 at 6% APR, the total of the interest column is about $1,599.80. What is the total of the principal column?

A. $1,599.80

B. $8,400.20

C. $10,000.00

D. $11,599.80

GO DEEPER 2 — Reading an amortization schedule

Question 5 of 5 · Learn and Apply

LEARN

"Front-loaded" means more of something comes at the beginning.

Which schedule feature shows that a loan is "front-loaded" with interest?

A. The balance rises each month

B. Every payment has an equal amount of interest in it

C. Interest parts are largest in the first payments

D. The last payment is all interest

SET 32 · Interest, Borrowing, and Debt

High-cost credit: payday loans, title loans, rent-to-own, and buy now, pay later

MAIN skill: Calculate and compare the true cost of high-cost credit and identify safer alternatives

Outcome FL.DEBT.32 · National topic: Managing Credit · NJSLS 9.1.12: CDM, FI
Learning target: Compare the costs of high-cost and alternative financial services

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Fees as a cost of borrowing (5 questions)
  Why: High-cost credit hides its price in fees; students must see a fee as part of the cost of borrowing.
- B2 · Math link → G7-S65-M (Grade 7 7.RP.A.3): Find a percent fee and the total with the fee
  Why: High-cost credit charges fees that are percents of the amount borrowed.
- B3 · Math link → G7-S07-M (Grade 7 7.RP.A.3): Solve multistep ratio problems
  Why: Converting a two-week fee into a yearly rate scales a ratio.

After 5 of 5 correct, Go Deeper unlocks (a chain):

MAIN — Calculate and compare the true cost of high-cost credit and identify safer alternatives

Question 1 of 5 · Learn and Apply

LEARN

Payday loans are small, short-term loans, often due on your next payday, with a flat fee. Converting the fee to an APR shows the true yearly cost: APR = (fee ÷ amount borrowed) × (365 ÷ days) × 100.

A payday lender charges a $45 fee to borrow $300 for 14 days. What is the APR (nearest whole percent)?

A. 15%

B. 26%

C. 45%

D. 391%

MAIN — Calculate and compare the true cost of high-cost credit and identify safer alternatives

Question 2 of 5 · Learn and Apply

LEARN

A rollover (or renewal) pays only the fee and extends the loan, so the original amount is still owed. Repeated rollovers can cost more than the original loan.

Instead of repaying, Kim "rolls over" a $300 payday loan four times, paying a $45 fee each time. How much has she paid in fees, and how much does she still owe?

A. $180 in fees; still owes $300

B. $45 in fees; owes nothing

C. $180 in fees; owes nothing

D. $300 in fees; owes $45

MAIN — Calculate and compare the true cost of high-cost credit and identify safer alternatives

Question 3 of 5 · Learn and Apply

LEARN

Rent-to-own lets you use an item while making weekly or monthly payments; you own it only after all payments. The total paid is often far more than the store price.

A rent-to-own store offers a TV for $25 a week for 78 weeks. The same TV sells for $600. How much more does rent-to-own cost?

A. $25

B. $600

C. $1,350

D. $1,950

MAIN — Calculate and compare the true cost of high-cost credit and identify safer alternatives

Question 4 of 5 · Learn and Apply

LEARN

A car title loan is a short-term loan that uses your vehicle as collateral. Fees are high, and if you cannot repay, the lender can repossess the car you may need to get to work.

A car title loan lends Ray $1,000 using his car as collateral, with a 25% monthly fee. What is the biggest risk?

A. The lender pays his insurance while he owes money

B. His credit score will automatically rise

C. The lender will pay off his car loan

D. He could lose the car if he cannot repay

MAIN — Calculate and compare the true cost of high-cost credit and identify safer alternatives

Question 5 of 5 · Learn and Apply

LEARN

Buy now, pay later plans let you split a purchase into a few installments, often with no interest if paid on time. Late fees can apply, several plans at once can be hard to track, and spending can creep up.

Buy now, pay later (BNPL) splits a $200 purchase into 4 payments of $50 every two weeks with no interest. Jo misses two payments and is charged a $7 late fee each time. What does the purchase cost her?

A. $200

B. $207

C. $214

D. $228

BACKWARD B1 · concept review — Fees as a cost of borrowing

Question 1 of 5 · Learn and Apply

LEARN

Fees are part of the cost of borrowing, just like interest. Total repaid = amount borrowed + interest + fees.

A lender charges a $20 fee to borrow $100 for one month. What is the cost of borrowing?

A. $20

B. $100

C. $120

D. $0, because it is a fee not interest

BACKWARD B1 · concept review — Fees as a cost of borrowing

Question 2 of 5 · Learn and Apply

LEARN

Fee as a percent = fee ÷ amount borrowed × 100.

The $20 fee on a $100 one-month loan is what percent of the amount borrowed?

A. 2%

B. 20%

C. 80%

D. 120%

BACKWARD B1 · concept review — Fees as a cost of borrowing

Question 3 of 5 · Learn and Apply

LEARN

A simple yearly rate is the monthly rate × 12.

If that 20% monthly cost continued all year, about what yearly rate would it be (simple)?

A. 12%

B. 20%

C. 32%

D. 240%

BACKWARD B1 · concept review — Fees as a cost of borrowing

Question 4 of 5 · Learn and Apply

LEARN

Credit unions, some banks, and employers offer small-dollar loans or paycheck advances at much lower cost than payday lenders. Asking a creditor for more time or using savings also avoids high fees.

Which is a lower-cost alternative to a payday loan for a $200 emergency?

A. A second payday loan to pay the first

B. A car title loan

C. A rent-to-own purchase

D. A small loan from a credit union

BACKWARD B1 · concept review — Fees as a cost of borrowing

Question 5 of 5 · Knowledge Check

Why are payday loans easy to get but costly?

A. They are free for all first-time borrowers in every state

B. The government pays the fees

C. They require little checking but charge very high fees

D. They lower your other bills

GO DEEPER 1 — Comparing high-cost options with safer ones

Question 1 of 5 · Learn and Apply

LEARN

Comparing the dollar cost of each option over the same time shows how much a lower APR saves.

Option 1: payday loan, $45 fee for $300 for 2 weeks. Option 2: credit union small loan, $300 at 28% APR for 2 weeks (simple interest). About how much does Option 2 cost?

A. $3.22

B. $32.20

C. $45.00

D. $84.00

GO DEEPER 1 — Comparing high-cost options with safer ones

Question 2 of 5 · Learn and Apply

LEARN

A pawn loan uses an item, such as jewelry, as collateral. If the loan is not repaid, the shop keeps and sells the item. Monthly fees add up quickly.

A borrower takes a $500 pawn loan with a $60 monthly fee and repays after 3 months. What is the total cost of the loan?

A. $60

B. $180

C. $560

D. $680

GO DEEPER 1 — Comparing high-cost options with safer ones

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Most payday loans cover regular expenses or small emergencies. Building even a small savings cushion breaks the cycle.

Which question helps someone avoid needing a payday loan next time?

A. How can I build a small emergency fund?

B. Which payday lender has the nicest store?

C. How can I find a lender that checks nothing?

D. How many payday loans can I have at once?

GO DEEPER 1 — Comparing high-cost options with safer ones

Question 4 of 5 · Learn and Apply

LEARN

"Loan stacking" means having several buy now, pay later plans at once. Payments on different schedules are easy to forget.

Jo has four BNPL plans with payments due on different dates. What is the main risk?

A. BNPL plans always charge 30% interest on every purchase

B. BNPL plans raise her credit score with each purchase

C. Losing track and missing payments, adding fees

D. BNPL purchases cannot be returned

GO DEEPER 1 — Comparing high-cost options with safer ones

Question 5 of 5 · Learn and Apply

LEARN

With an installment loan, you own the item when you buy it and repay the lender. With rent-to-own, the store keeps ownership while you make rental payments.

Which feature makes rent-to-own different from a regular purchase on an installment loan?

A. You own the item immediately

B. There is no cost beyond the store's regular price

C. The item is always new

D. You do not own the item until the final payment

GO DEEPER 2 — Why people use high-cost credit, and how to respond

Question 1 of 5 · Learn and Apply

LEARN

Lack of savings, poor access to bank credit, and urgent bills push people toward high-cost credit. Understanding the reasons helps identify better alternatives.

Why do many people turn to payday loans?

A. They need cash quickly and lack savings or other credit

B. Payday loans are usually cheaper than small credit union loans

C. Payday loans improve credit scores with each loan

D. Payday loans have low fees when paid on time

GO DEEPER 2 — Why people use high-cost credit, and how to respond

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Many creditors, including utilities, offer payment plans or hardship programs. Asking costs nothing and can avoid fees.

Ella cannot pay a $150 electric bill on time. Which step should she try BEFORE high-cost credit?

A. Take a title loan on her car

B. Ignore the bill until it goes to collections

C. Take three BNPL plans for groceries

D. Call the utility to ask for a payment plan

GO DEEPER 2 — Why people use high-cost credit, and how to respond

Question 3 of 5 · Learn and Apply

LEARN

Some employers and apps offer earned-wage access or paycheck advances for a small fee. Compare the dollar cost with other options.

An employer offers a paycheck advance of $200 with a $5 fee, repaid from the next paycheck. Compared with a $30 payday fee, how much does it save?

A. $5

B. $25

C. $30

D. $200

GO DEEPER 2 — Why people use high-cost credit, and how to respond

Question 4 of 5 · Learn and Apply

LEARN

States set many of the rules for payday and other small-dollar loans, including rate caps and outright bans.

Which statement about state rules on payday loans is MOST accurate?

A. Every state allows unlimited payday fees

B. Payday loans are illegal everywhere

C. Rules differ by state, and some ban them

D. Only the federal government sets payday rules

GO DEEPER 2 — Why people use high-cost credit, and how to respond

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Unlicensed online lenders and scammers may ask for bank logins to drain accounts. Check that a lender is licensed in your state.

Online "instant cash" sites ask for your bank login to approve a loan. What is the safest response?

A. Never share bank logins with a lender

B. Share it, since approval apps are encrypted

C. Share it, then change the password after the loan arrives

D. Share your PIN instead of the password

SET 33 · Interest, Borrowing, and Debt

Debt-to-income and repayment strategies

MAIN skill: Calculate debt-to-income ratio and choose a debt repayment strategy

Outcome FL.DEBT.33 · National topic: Managing Credit · NJSLS 9.1.12: CDM

Learning target: Evaluate debt load with DTI and choose debt repayment strategies

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Ratios and percents of income (5 questions)
  Why: DTI is a ratio of payments to income expressed as a percent.
- B2 · Math link → G6-S01-M (Grade 6 6.RP.A.1): Write a ratio that describes the relationship between two quantities
  Why: DTI is a ratio of debt payments to income.
- B3 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: DTI limits are percents of income.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Avalanche or snowball in practice (5 questions)
- Go Deeper 2: Consolidation and refinancing debt (5 questions)

Practical skills beyond the standards: Debt inventory and payoff plans

Content status: stable

MAIN — Calculate debt-to-income ratio and choose a debt repayment strategy

Question 1 of 5 · Learn and Apply

LEARN

Debt-to-income ratio (DTI) compares monthly debt payments with gross monthly income: DTI = total monthly debt payments ÷ gross monthly income × 100. Lenders use DTI to judge whether a borrower can handle more debt.

Amir's gross monthly income is $4,000. His monthly debt payments are a $350 car loan, a $250 student loan, and a $100 credit card minimum. What is his debt-to-income ratio?

A. 5.7%

B. 10.0%

C. 17.5%

D. 7,000%

MAIN — Calculate debt-to-income ratio and choose a debt repayment strategy

Question 2 of 5 · Learn and Apply

LEARN

Two common payoff strategies: the avalanche method pays minimums on all debts and puts extra money toward the highest interest rate first (saving the most interest); the snowball method puts extra toward the smallest balance first (quick wins that build motivation).

Debts: Card A $1,200 at 24% APR; Card B $400 at 18% APR; Loan C $3,000 at 7% APR. Under the AVALANCHE method, which debt gets extra payments first?

A. Card B (smallest balance)

B. Loan C (largest balance)

C. Card A (highest APR)

D. All three equally

MAIN — Calculate debt-to-income ratio and choose a debt repayment strategy

Question 3 of 5 · Learn and Apply

LEARN

The snowball method pays minimums on all debts and puts every extra dollar toward the smallest balance first.

Three debts: (Card A $1,200 at 24%; Card B $400 at 18%; Loan C $3,000 at 7%), which debt does the SNOWBALL method pay off first?

A. Card A (highest APR)

B. Loan C (lowest APR)

C. Loan C (largest balance)

D. Card B (smallest balance)

MAIN — Calculate debt-to-income ratio and choose a debt repayment strategy

Question 4 of 5 · Learn and Apply

LEARN

Paying down a higher-rate debt removes more interest each month: interest avoided ≈ amount × (APR ÷ 12).

In one month, how much more interest does $200 of extra payment save on a 24% APR card than on a 7% APR loan (monthly rate = APR ÷ 12)?

A. $1.17

B. $2.83

C. $4.00

D. $34.00

MAIN — Calculate debt-to-income ratio and choose a debt repayment strategy

Question 5 of 5 · Knowledge Check

A lender prefers DTI below 36%. Amir earns $4,000 gross monthly and already pays $700 in debts. What is the most in additional monthly debt payments he could take on and stay at or below 36%?

A. $700

B. $740

C. $1,440

D. $2,560

BACKWARD B1 · concept review — Ratios and percents of income

Question 1 of 5 · Learn and Apply

LEARN

A ratio compares two quantities. Payments to income = payments ÷ income.

Monthly debt payments are $500 and income is $2,500. What is the ratio of payments to income, as a fraction in simplest form?

A. 5/1

B. 1/25

C. 2/5

D. 1/5

BACKWARD B1 · concept review — Ratios and percents of income

Question 2 of 5 · Learn and Apply

LEARN

To write a fraction as a percent, divide, then multiply by 100.

Write 1/5 as a percent.

A. 0.2%

B. 5%

C. 15%

D. 20%

BACKWARD B1 · concept review — Ratios and percents of income

Question 3 of 5 · Learn and Apply

LEARN

Lenders usually calculate DTI with gross (before-tax) monthly income.

Which income should be used for DTI as lenders usually figure it?

A. Gross monthly income

B. Net income after a vacation

C. Yearly income divided by 52

D. Only bonus income

BACKWARD B1 · concept review — Ratios and percents of income

Question 4 of 5 · Learn and Apply

LEARN

DTI counts payments on debts (loans, credit cards, mortgages or rent in some calculations), not everyday expenses like food.

Which counts as a monthly DEBT payment for DTI?

A. A grocery bill

B. A monthly cell phone bill

C. A student loan payment

D. A movie ticket

BACKWARD B1 · concept review — Ratios and percents of income

Question 5 of 5 · Knowledge Check

If DTI goes from 15% to 40%, what has happened?

A. A larger share of income now goes to debt payments

B. Income has doubled

C. Debt has been paid off, freeing up more of the income

D. Nothing important

GO DEEPER 1 — Avalanche or snowball in practice

Question 1 of 5 · Learn and Apply

LEARN

Sometimes the highest-rate debt is also the smallest balance, so both methods choose the same first target.

Lee has $300 a month for debts beyond minimums. Debts: $500 at 22%, $2,000 at 22%, $800 at 10%. Which method choice is the same under both avalanche and snowball for the first target?

A. Both pay the $2,000 debt at 22% first

B. Both pay the $800 debt first

C. Both pay the $500 debt at 22% first

D. They disagree on every debt

GO DEEPER 1 — Avalanche or snowball in practice

Question 2 of 5 · Learn and Apply

LEARN

Research on behavior suggests quick wins can help people stick with a plan. The best method is one you will actually follow.

Which reason might lead someone to choose the snowball method even though it can cost more interest?

A. It always saves the most interest

B. Lenders charge lower rates to people who use it

C. It lowers the interest rates on the other debts automatically

D. Paying off small debts quickly keeps them motivated

GO DEEPER 1 — Avalanche or snowball in practice

Question 3 of 5 · Learn and Apply

LEARN

The "rollover" step: when one debt is paid off, its payment is added to the next target, so payments grow like a snowball.

After Card B ($400) is paid off, Lee rolls its $40 minimum plus his $200 extra into the next debt. How much now goes to the next debt each month beyond its own minimum?

A. $40

B. $200

C. $240

D. $440

GO DEEPER 1 — Avalanche or snowball in practice

Question 4 of 5 · Learn and Apply

LEARN

The interest saved by paying one debt instead of another is about the amount × the difference in rates.

Two $1,000 debts: one at 25% APR, one at 5% APR. Paying the 25% debt first instead of the 5% debt avoids roughly how much interest per year on that $1,000?

A. $50

B. $200

C. $250

D. $300

GO DEEPER 1 — Avalanche or snowball in practice

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

A debt inventory, a list of every debt with its balance, rate, and minimum payment, is the starting point for any payoff plan.

Which step should come BEFORE choosing a payoff method?

A. Listing each debt's balance, rate, and minimum

B. Opening a new credit card

C. Skipping minimum payments on the smallest debts for a while

D. Closing all savings accounts

GO DEEPER 2 — Consolidation and refinancing debt

Question 1 of 5 · Learn and Apply

LEARN

Debt consolidation combines several debts into one new loan, ideally at a lower rate. It can lower interest and simplify payments, but only if the new rate is lower and new debt is not added.

Pia combines $6,000 of credit card debt at 23% APR into a personal loan at 11% APR. About how much interest does this save in the first year (simple estimate on the full balance)?

A. $660

B. $720

C. $1,380

D. $2,040

GO DEEPER 2 — Consolidation and refinancing debt

Question 2 of 5 · Learn and Apply

LEARN

Consolidation moves debt; it does not change spending habits.

After consolidating, Pia keeps using her credit cards and builds new balances. What happens?

A. The loan pays the new card debt automatically

B. Her rate on the cards drops to 11%

C. Her total debt goes down

D. She ends up with the loan AND new card debt

GO DEEPER 2 — Consolidation and refinancing debt

Question 3 of 5 · Learn and Apply

LEARN

An origination fee is a one-time charge for making a loan, often a percent of the loan amount. It adds to the cost and should be included in comparisons.

A consolidation loan has a 5% origination fee on $6,000. How much is the fee?

A. $30

B. $300

C. $3,000

D. $6,300

GO DEEPER 2 — Consolidation and refinancing debt

Question 4 of 5 · Learn and Apply

LEARN

Debt relief companies that sell services by phone generally cannot charge fees until they actually settle or reduce a debt. Up-front fee demands are a warning sign.

Which consolidation offer should raise suspicion?

A. A credit union loan with a stated APR and no prepayment penalty

B. A bank personal loan with a clear fee schedule

C. A company that wants large fees up front to "settle" debts

D. A nonprofit credit counselor offering a free budget review

GO DEEPER 2 — Consolidation and refinancing debt

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Nonprofit credit counseling agencies can review your budget and debts and may offer debt management plans.

Where can someone get free or low-cost help making a debt plan?

A. A payday lender

B. An anonymous social media account offering tips

C. A rent-to-own store

D. A nonprofit credit counseling agency

SET 34 · Interest, Borrowing, and Debt

When debt goes wrong: late payments, collections, and bankruptcy

MAIN skill: Explain the consequences of missed payments and the rights of consumers with debt in collection

Outcome FL.DEBT.34 · National topic: Managing Credit · NJSLS 9.1.12: CDM, CP
Learning target: Consequences of not repaying debt; consumer protections in debt collection

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Due dates, late fees, and minimum payments (5 questions)
  Why: Students must know what a due date and late fee are before reasoning about collections and credit damage.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Comparing fees and payments uses percents.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 2: Long-term consequences and recovery (5 questions)

Practical skills beyond the standards: Responding to a debt collector; Recognizing credit repair scams

Content status: time-sensitive

Source: CFPB (Fair Debt Collection Practices Act, Regulation F) — Debt collectors must send validation information; consumers can dispute a debt and can ask a collector to stop contacting them; harassment is prohibited. https://www.consumerfinance.gov/rules-policy/regulations/1006/

Source: CFPB — Most negative information stays on credit reports for 7 years; some bankruptcies for up to 10 years. https://www.consumerfinance.gov/ask-cfpb/how-long-does-negative-information-remain-on-my-credit-report-en-323/

MAIN — Explain the consequences of missed payments and the rights of consumers with debt in collection

Question 1 of 5 · Learn and Apply

LEARN

Consequences of a missed payment build over time. Right after the due date, the issuer can charge a late fee. Once a payment is 30 or more days past due, it can be reported to credit bureaus. Debts left unpaid for months can go to collectors or court.

Ana misses a credit card payment by 10 days. Which consequence is MOST likely first?

A. A fee for paying late

B. Immediate arrest

C. Her wages are garnished the next day

D. A 30-day late mark on her credit report

MAIN — Explain the consequences of missed payments and the rights of consumers with debt in collection

Question 2 of 5 · Learn and Apply

LEARN

Under federal law, most negative items stay on credit reports for 7 years. Some bankruptcies can stay for up to 10 years. Positive information can stay longer.

A 30-day late payment was reported in March 2020. Under the usual rule for negative items, about when should it drop off Ana's credit report?

A. Around March 2021

B. Around March 2030

C. Around March 2027

D. Never; late payments stay forever

MAIN — Explain the consequences of missed payments and the rights of consumers with debt in collection

Question 3 of 5 · Learn and Apply

LEARN

The Fair Debt Collection Practices Act gives consumers rights: collectors must provide validation information about the debt, consumers can dispute it, and collectors may not harass, threaten, or lie.

A debt collector calls about an old debt Sam does not recognize. What right does he have?

A. To have the whole debt erased simply by asking for that

B. To make the collector pay him for the call

C. None; collectors can say anything

D. To dispute the debt and receive validation information

MAIN — Explain the consequences of missed payments and the rights of consumers with debt in collection

Question 4 of 5 · Learn and Apply

LEARN

Collectors may not threaten arrest or legal action they cannot or do not intend to take.

A collector threatens to have Rina arrested over a $400 credit card debt. What is true?

A. This threat is illegal; debt is not a crime

B. She must pay immediately or go to jail

C. Collectors may say anything to get paid

D. Arrest is a normal step for unpaid debts over $300

MAIN — Explain the consequences of missed payments and the rights of consumers with debt in collection

Question 5 of 5 · Learn and Apply

LEARN

Bankruptcy is a federal court process. Chapter 7 can discharge many debts, sometimes after selling some assets; Chapter 13 sets a repayment plan, usually over 3–5 years. Some debts, such as most student loans and child support, are hard or impossible to discharge.

What is bankruptcy?

A. A free way to cancel all debts with no consequences

B. A payment plan arranged by a debt collector

C. A court process to erase or reorganize debts

D. A credit score below 500

BACKWARD B1 · concept review — Due dates, late fees, and minimum payments

Question 1 of 5 · Learn and Apply

LEARN

A due date is the deadline for a payment. Paying after it can bring a late fee and, if very late, other consequences.

A bill says "Due June 15." Ali pays on June 18. What usually happens?

A. He may be charged a late fee

B. Nothing, because three days is close enough

C. The bill is cancelled

D. He earns interest

BACKWARD B1 · concept review — Due dates, late fees, and minimum payments

Question 2 of 5 · Learn and Apply

LEARN

The minimum payment is the smallest amount that keeps an account in good standing that month. It does not pay off the balance.

A card's minimum payment is $35 on a $900 balance. If Ali pays $35, what happens to the rest?

A. It is forgiven

B. It is paid by the card company

C. It must be paid separately in cash at a bank branch

D. It carries over and can be charged interest

BACKWARD B1 · concept review — Due dates, late fees, and minimum payments

Question 3 of 5 · Knowledge Check · Practical how-to

Which habit best prevents missed payments?

A. Paying only when reminded by a collector

B. Waiting for paper bills only

C. Autopay for at least the minimum

D. Paying whatever is left at month end

BACKWARD B1 · concept review — Due dates, late fees, and minimum payments

Question 4 of 5 · Learn and Apply

LEARN

Comparing a fee with the payment shows how large it is: fee ÷ payment × 100.

A $35 late fee on a $25 minimum payment adds what percent to the amount due that month?

A. 10%

B. 35%

C. 71%

D. 140%

BACKWARD B1 · concept review — Due dates, late fees, and minimum payments

Question 5 of 5 · Knowledge Check · Practical how-to

If you know you will miss a payment, what should you do first?

A. Ignore all calls and letters until the problem passes

B. Open a new card to pay it

C. Contact the lender to ask about options

D. Change your phone number

GO DEEPER 1 — Dealing with debt collectors

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

Consumers can tell a debt collector in writing to stop contacting them. The collector may then contact them only to confirm or to say it will take a specific action, such as filing a lawsuit. The debt itself still exists.

Sam wants a collector to stop calling. Under federal rules, what can he do?

A. Nothing; calls cannot be stopped

B. Pay a fee to stop the calls

C. Ask his bank to block the debt from being collected

D. Ask in writing that it stop contacting him

GO DEEPER 1 — Dealing with debt collectors

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

After a collector first contacts you, it must send validation information. If you dispute the debt in writing within the validation period (generally 30 days), the collector must pause collection until it verifies the debt.

Sam receives a debt validation notice on May 1 and believes the amount is wrong. By about when should he send a written dispute so the collector must verify the debt before continuing?

A. By about May 31

B. By May 4

C. By about November 1

D. Any time, since there is no deadline

GO DEEPER 1 — Dealing with debt collectors

Question 3 of 5 · Learn and Apply

LEARN

Collectors may contact you to collect, but federal law bans harassment, threats, false statements, and unfair practices.

Which collector behavior is prohibited?

A. Calling repeatedly to harass

B. Sending a letter with the amount owed

C. Calling during normal hours to ask for payment

D. Offering a payment plan

GO DEEPER 1 — Dealing with debt collectors

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

The CFPB and state attorneys general accept complaints about debt collection.

Where can someone report a collector who breaks the rules?

A. The collector's own sales and marketing team

B. A social media influencer

C. The CFPB or the state attorney general

D. The IRS

GO DEEPER 1 — Dealing with debt collectors

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

A settlement is an agreement to pay less than the full balance. Get the terms in writing before paying, and keep proof of payment.

A collector offers to settle a $2,000 debt for $1,200. What should Sam get before paying?

A. Nothing; a phone promise is enough

B. A promise over the phone only

C. A new credit card from the collector

D. The settlement agreement in writing

GO DEEPER 2 — Long-term consequences and recovery

Question 1 of 5 · Learn and Apply

LEARN

Most negative items stay on a credit report for 7 years from when the trouble began.

Sam's collection account was reported 3 years ago. About how many more years will it typically stay on his credit report?

A. 4 years

B. 7 years

C. 10 years

D. 0 years

GO DEEPER 2 — Long-term consequences and recovery

Question 2 of 5 · Learn and Apply

LEARN

The impact of old negative items fades over time, especially when new on-time payments build a better record.

Which action usually helps a credit report recover over time?

A. Opening many new cards at once

B. Ignoring all mail from creditors

C. Paying a company to erase accurate negatives

D. Making every new payment on time

GO DEEPER 2 — Long-term consequences and recovery

Question 3 of 5 · Learn and Apply

LEARN

You can dispute inaccurate information for free. Accurate negative information generally stays for the time allowed by law, no matter who you pay.

A company promises to remove ACCURATE negative information from a credit report for $500. What should a consumer know?

A. Paying more guarantees removal

B. It is the only way to fix credit

C. Accurate negatives cannot be removed early

D. The credit bureaus require consumers to buy this service

GO DEEPER 2 — Long-term consequences and recovery

Question 4 of 5 · Learn and Apply

LEARN

A statute of limitations limits how long a creditor can sue over a debt. It varies by state, and in some states a payment can restart the clock.

In some states, making a small payment on a very old debt can do what?

A. Erase the debt entirely

B. Guarantee a perfect credit score

C. Make the debt illegal to collect from that point on

D. Restart the time limit for a lawsuit on that debt

GO DEEPER 2 — Long-term consequences and recovery

Question 5 of 5 · Learn and Apply

LEARN

Chapter 13 bankruptcy reorganizes debts: a person with regular income repays creditors through a court-approved plan.

Which statement about Chapter 13 bankruptcy is TRUE?

A. It erases every debt instantly

B. It is the same as a debt management plan from a counselor

C. It sets a court-approved repayment plan, often 3–5 years

D. It has no effect on credit

SET 35 · Credit Cards and Credit Scores

What a credit card is

MAIN skill: Explain how a credit card works: credit limit, revolving balance, and grace period

Outcome FL.CREDIT.35 · National topic: Managing Credit · NJSLS 9.1.12: CDM

Learning target: Explain how credit cards work: credit limits, revolving balances, grace periods, and APR

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Credit versus debit (5 questions)
  - Why: The most common credit card misconception is treating credit as one's own money.
- B2 · Math link → G6-S17-M (Grade 6 6.NS.B.3): Subtract multi-digit decimals
  - Why: Available credit subtracts the balance from the limit.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: What is APR on a credit card? (5 questions)
- Go Deeper 2: Cash advances (5 questions)

Practical skills beyond the standards: Choosing a card by how you will use it

Content status: time-sensitive

Source: CFPB (Credit CARD Act / Regulation Z) — Card issuers must mail statements at least 21 days before the due date; statements show the minimum payment warning; applicants under 21 need independent income or a cosigner. https://www.consumerfinance.gov/consumer-tools/credit-cards/answers/key-terms/

MAIN — Explain how a credit card works: credit limit, revolving balance, and grace period

Question 1 of 5 · Learn and Apply

LEARN

A credit card lets you borrow up to a credit limit to make purchases. The card issuer pays the store, and you owe the issuer. Each month you get a statement and can pay the full balance or a smaller amount (at least the minimum). Any unpaid balance "revolves" to the next month, usually with interest.

Leo uses a credit card to buy a $90 jacket. What happens to his money right away?

A. Nothing yet; he now owes the card issuer $90

B. $90 leaves his checking account immediately, as with a debit card

C. The store waits to be paid until Leo pays his bill

D. The jacket is free if he pays the minimum each month

MAIN — Explain how a credit card works: credit limit, revolving balance, and grace period

Question 2 of 5 · Learn and Apply

LEARN

The credit limit is the most you can owe on the card at one time. Available credit = credit limit − current balance.

Mia's card has a $1,500 credit limit and a $620 balance. How much more can she charge?

A. $620

B. $880

C. $1,500

D. $2,120

MAIN — Explain how a credit card works: credit limit, revolving balance, and grace period

Question 3 of 5 · Learn and Apply

LEARN

Most cards have a grace period: if you pay the full statement balance by the due date, you are not charged interest on new purchases. The law requires statements to be sent at least 21 days before the due date. Carrying a balance usually ends the grace period until the card is paid in full again.

Ben pays his full statement balance by the due date every month. How much interest does he pay on purchases?

A. The full APR on every purchase

B. Half the APR, because he pays on time

C. $0

D. $25 a month, the minimum payment

MAIN — Explain how a credit card works: credit limit, revolving balance, and grace period

Question 4 of 5 · Learn and Apply

LEARN

Credit comes in two main forms. Installment credit (car loans, student loans) is one amount repaid in fixed payments. Revolving credit (credit cards, lines of credit) can be used again and again up to a limit, with payments that change with the balance.

Which statement describes "revolving" credit?

A. You borrow one fixed amount and repay it on a schedule

B. You can only use it once, then the account closes

C. The balance is paid automatically by the bank

D. You can borrow, repay, and borrow again up to a limit

MAIN — Explain how a credit card works: credit limit, revolving balance, and grace period

Question 5 of 5 · Learn and Apply

LEARN

The Credit CARD Act of 2009 says applicants under 21 must show independent income or assets to repay, or have a cosigner who is at least 21.

Jada is 19 with no income and applies for a credit card on her own. Under federal law, what does she need?

A. Independent income, or a cosigner 21 or older

B. Only a school ID, because students get automatic approval

C. Nothing; anyone over 18 must be approved

D. A parent's permission slip signed at school

BACKWARD B1 · concept review — Credit versus debit

Question 1 of 5 · Learn and Apply

LEARN

A debit card takes money from your own account. A credit card borrows money you must repay.

With a DEBIT card, where does the money come from?

A. The cardholder's own bank account

B. A loan from the card issuer, repaid next month

C. The store's savings account

D. The government

BACKWARD B1 · concept review — Credit versus debit

Question 2 of 5 · Learn and Apply

LEARN

Every credit card purchase is borrowing. The amount is added to your card balance, which you owe the card issuer.

With a CREDIT card, what does the cardholder create with each purchase?

A. A deposit into savings

B. A gift from the store

C. A reduction in their bank balance right away

D. A debt owed to the card issuer

BACKWARD B1 · concept review — Credit versus debit

Question 3 of 5 · Learn and Apply

LEARN

A credit limit is a borrowing maximum, not money you own.

Sam's credit limit is $2,000. Does that mean he has $2,000 of his own money?

A. Yes; the limit is deposited into his account

B. Yes, but only on weekends

C. No; it is the most he can borrow

D. No; it is the minimum he must spend

BACKWARD B1 · concept review — Credit versus debit

Question 4 of 5 · Learn and Apply

LEARN

Interest is charged on borrowed money that is not repaid on time.

Which payment method can lead to paying INTEREST if the bill is not paid in full?

A. A debit card

B. Cash

C. A credit card

D. A prepaid gift card

BACKWARD B1 · concept review — Credit versus debit

Question 5 of 5 · Learn and Apply

LEARN

Federal law caps your liability for unauthorized credit card charges at $50. Debit card limits depend on how fast you report a problem.

Which card typically has STRONGER federal protection against unauthorized charges?

A. A debit card

B. A store gift card

C. A library card

D. A credit card

GO DEEPER 1 — What is APR on a credit card?

Question 1 of 5 · Learn and Apply

LEARN

A credit card's APR is its yearly interest rate. Interest for about a month ≈ balance × (APR ÷ 12). (Many cards actually figure interest daily.)

A card has a 24% purchase APR. If Kai carries a $500 balance for a whole month, about how much interest is charged (monthly rate = APR ÷ 12)?

A. $1

B. $10

C. $24

D. $120

GO DEEPER 1 — What is APR on a credit card?

Question 2 of 5 · Learn and Apply

LEARN

Cards can have different APRs for purchases, cash advances, and balance transfers, plus a penalty APR that can apply after a late payment, often 60 days late for existing balances.

A card lists several APRs: purchase APR 21.99%, cash advance APR 29.99%, penalty APR 29.99%. When does the PENALTY APR usually apply?

A. After a serious late payment

B. On every purchase made on weekends

C. Only on balance transfers made in the first month

D. Never; it is only shown for decoration

GO DEEPER 1 — What is APR on a credit card?

Question 3 of 5 · Learn and Apply

LEARN

The best card depends on how you use it. If you always pay in full, the APR rarely matters, but fees do.

Two cards: Card A 18% APR, $0 annual fee; Card B 15% APR, $95 annual fee. Ana pays in full every month. Which costs her less?

A. Card B, because 15% is lower than 18%

B. They cost the same

C. Card B, because annual fees are refunded

D. Card A, because she never pays interest

GO DEEPER 1 — What is APR on a credit card?

Question 4 of 5 · Learn and Apply

LEARN

Under the Credit CARD Act, issuers generally must give 45 days' notice before a significant change such as a higher APR on new purchases.

Maya's card issuer plans to raise the APR on new purchases starting July 1. Under the CARD Act, by about when must she receive notice?

A. By June 24

B. By June 30

C. By about May 17

D. Notice is not required before the change

GO DEEPER 1 — What is APR on a credit card?

Question 5 of 5 · Learn and Apply

LEARN

Daily interest = balance × (APR ÷ 365).

A 24% APR card charges interest daily on a $500 balance. About what is the daily interest (APR ÷ 365)?

A. $0.03

B. $0.33

C. $3.29

D. $10.00

GO DEEPER 2 — Cash advances

Question 1 of 5 · Learn and Apply

LEARN

A cash advance means using your credit card to get cash (at an ATM or bank). It is borrowing. Cash advances usually have a fee, a higher APR, and no grace period: interest starts right away.

A cash advance is...

A. borrowing cash against your credit card

B. withdrawing your own savings with a debit card

C. a free bonus paid by the card issuer

D. a refund of a returned purchase

GO DEEPER 2 — Cash advances

Question 2 of 5 · Learn and Apply

LEARN

Cash advance fees are often the larger of a percent of the amount or a minimum dollar amount.

Tom takes a $200 cash advance. The fee is 5% (minimum $10). What is the fee?

A. $5

B. $10

C. $20

D. $200

GO DEEPER 2 — Cash advances

Question 3 of 5 · Learn and Apply

LEARN

Interest on a cash advance starts the day it is taken. Interest ≈ amount × (APR ÷ 365) × days.

A $400 cash advance has a 5% fee and a 29.99% APR with no grace period. About how much interest accrues in 30 days (daily rate = APR ÷ 365)?

A. $0

B. $9.86

C. $20.00

D. $119.96

GO DEEPER 2 — Cash advances

Question 4 of 5 · Learn and Apply

LEARN

The total cost of a cash advance includes both the fee and the interest.

Tom's $400 cash advance cost a $20 fee plus about $9.86 of interest after 30 days. What was the total cost?

A. $9.86

B. $20.00

C. $29.86

D. $429.86

GO DEEPER 2 — Cash advances

Question 5 of 5 · Knowledge Check

Which is usually a cheaper way to get $100 cash quickly than a credit card cash advance?

A. Taking a cash advance on two cards instead of one

B. A payday loan

C. A title loan

D. Withdrawing from your own savings or checking

SET 36 · Credit Cards and Credit Scores

Reading a credit card statement

MAIN skill: Read a credit card statement and decide how much to pay and when

Outcome FL.CREDIT.36 · National topic: Managing Credit · NJSLS 9.1.12: CDM

Learning target: Read a credit card statement and explain the cost of making only minimum payments

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Due dates, balances, and payments on a bill (5 questions)
  Why: Reading a statement requires telling apart the balance, the minimum, and the due date.
- B2 · Math link → G6-S17-M (Grade 6 6.NS.B.3): Subtract multi-digit decimals
  Why: Carried balances subtract payments from the statement balance.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Disputing a credit card billing error (5 questions)
- Go Deeper 2: Statement dates and payment timing (5 questions)

Practical skills beyond the standards: Reading a card statement line by line; Disputing a billing error

Content status: time-sensitive

Source: CFPB (Credit CARD Act / Regulation Z) — Card issuers must mail statements at least 21 days before the due date; statements show the minimum payment warning; applicants under 21 need independent income or a cosigner. https://www.consumerfinance.gov/consumer-tools/credit-cards/answers/key-terms/

MAIN — Read a credit card statement and decide how much to pay and when

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

A credit card statement lists the previous balance, payments, new purchases, fees, interest, the new (statement) balance, the minimum payment, and the due date. Paying the full statement balance by the due date avoids interest on purchases (the grace period).

Credit card statement (closing date May 20): Previous balance $640.00 | Payments −$640.00 | Purchases +$412.75 | Fees $0.00 | Interest charged $0.00 | New balance $412.75 | Minimum payment due $25.00 | Payment due date June 15 | Purchase APR 22.99%

How much must Rosa pay by June 15 to avoid ANY interest on these purchases?

A. $25.00

B. $387.75

C. $412.75

D. $640.00

MAIN — Read a credit card statement and decide how much to pay and when

Question 2 of 5 · Learn and Apply

LEARN

The minimum payment due is the smallest amount that avoids a late fee that month. Paying only the minimum leaves the rest of the balance owed, and interest is charged on it.

Credit card statement (closing date May 20): Previous balance $640.00 | Payments −$640.00 | Purchases +$412.75 | Fees $0.00 | Interest charged $0.00 | New balance $412.75 | Minimum payment due $25.00 | Payment due date June 15 | Purchase APR 22.99%

What is the LEAST Rosa can pay by June 15 and keep her account in good standing?

A. $0.00

B. $25.00

C. $412.75

D. $640.00

MAIN — Read a credit card statement and decide how much to pay and when

Question 3 of 5 · Knowledge Check

Credit card statement (closing date May 20): Previous balance $640.00 | Payments −$640.00 | Purchases +$412.75 | Fees $0.00 | Interest charged $0.00 | New balance $412.75 | Minimum payment due $25.00 | Payment due date June 15 | Purchase APR 22.99%

If Rosa pays only the $25 minimum, what balance carries into next month before interest?

A. $387.75

B. $412.75

C. $437.75

D. $615.00

MAIN — Read a credit card statement and decide how much to pay and when

Question 4 of 5 · Learn and Apply

LEARN

When the previous statement balance was paid in full by its due date, new purchases usually get a grace period, so no purchase interest appears on the next statement.

Credit card statement (closing date May 20): Previous balance $640.00 | Payments −$640.00 | Purchases +$412.75 | Fees $0.00 | Interest charged $0.00 | New balance $412.75 | Minimum payment due $25.00 | Payment due date June 15 | Purchase APR 22.99%

The statement shows "Interest charged $0.00." Why?

A. Paying the last balance in full kept the grace period

B. Her card has no interest rate at all

C. Interest is only charged in June

D. The card issuer forgot to add this month's interest charge

MAIN — Read a credit card statement and decide how much to pay and when

Question 5 of 5 · Learn and Apply

LEARN

Federal law requires statements to show how long it would take to pay off the balance making only minimum payments, and the total cost, compared with a payment that pays it off in 3 years.

A statement's "minimum payment warning" says paying only the minimum will take 9 years and cost $2,100 in total on a $1,000 balance. What does this tell the cardholder?

A. The minimum payment is always the best choice

B. The remaining balance will be forgiven after 9 years

C. The minimum route costs far more and takes longer

D. The interest rate will drop to 0%

BACKWARD B1 · concept review — Due dates, balances, and payments on a bill

Question 1 of 5 · Learn and Apply

LEARN

The due date is the deadline for the payment. Paying after it can bring late fees and other consequences.

On a bill, what is the "due date"?

A. The deadline to make a payment

B. The date the purchase was made

C. The date the card expires

D. The day interest is waived forever

BACKWARD B1 · concept review — Due dates, balances, and payments on a bill
Question 2 of 5 · Learn and Apply

LEARN
The balance is the total owed. Paying the full balance clears the debt.

A bill shows a balance of $300 and a minimum payment of $25. Which payment pays it off?

A. $25
B. $275
C. $300
D. $325

BACKWARD B1 · concept review — Due dates, balances, and payments on a bill
Question 3 of 5 · Learn and Apply

LEARN
The new balance (statement balance) is everything owed as of the closing date.

Which number on a statement is the total amount owed at closing?

A. The minimum payment due this month
B. The credit limit
C. The new (statement) balance
D. The APR

BACKWARD B1 · concept review — Due dates, balances, and payments on a bill

Question 4 of 5 · Knowledge Check

A $412.75 balance is paid with $100. What remains?

A. $100.00

B. $312.75

C. $412.75

D. $512.75

BACKWARD B1 · concept review — Due dates, balances, and payments on a bill

Question 5 of 5 · Knowledge Check · Practical how-to

Why read every line of a card statement?

A. Because statements are entertainment

B. Because reading lowers the APR

C. Because the minimum payment changes once you read it

D. To catch errors, unauthorized charges, and fees

GO DEEPER 1 — Disputing a credit card billing error

Question 1 of 5 · Learn and Apply

LEARN

The Fair Credit Billing Act lets you dispute billing errors on credit card statements, such as charges for goods not received, returned items not credited, or wrong amounts. Send a written dispute within 60 days after the statement with the error was sent.

Ana sees a $59 charge on her card statement for an item she returned. Under the Fair Credit Billing Act, how long does she generally have to dispute it in writing?

A. 60 days after the statement was sent

B. Within 2 business days after the purchase

C. 1 year after the purchase

D. There is no time limit

GO DEEPER 1 — Disputing a credit card billing error

Question 2 of 5 · Learn and Apply

LEARN

During a billing dispute, you can withhold payment of the disputed amount (and related charges) but must pay the undisputed part of the bill.

While Ana's $59 billing dispute is investigated, what must she pay?

A. Nothing at all on the whole account until it is settled

B. The disputed $59 first

C. A $59 dispute fee

D. The rest of the bill, but not the disputed $59

GO DEEPER 1 — Disputing a credit card billing error

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Your statement lists where to send billing questions. A written dispute to that address protects your rights under the Fair Credit Billing Act.

Where should Ana send a billing-error dispute?

A. To the store's social media page

B. To the IRS

C. The issuer's billing-inquiries address

D. To the three credit bureaus, but not the issuer

GO DEEPER 1 — Disputing a credit card billing error

Question 4 of 5 · Knowledge Check

Which situation is a billing error Ana can dispute?

A. She regrets buying a jacket she wore

B. She forgot she made a purchase but did make it

C. She was charged twice for one purchase

D. She wishes the APR were lower

GO DEEPER 1 — Disputing a credit card billing error

Question 5 of 5 · Learn and Apply

LEARN

For unauthorized credit card charges, federal law caps your liability at $50. Many issuers offer $0 liability as a policy.

A fraudulent $300 charge appears on Ana's credit card. Under federal law, what is the most she can be held responsible for?

A. $300

B. $500

C. $0 in every case by law

D. $50

GO DEEPER 2 — Statement dates and payment timing

Question 1 of 5 · Learn and Apply

LEARN

The closing date ends a billing cycle. Purchases after the closing date appear on the next statement.

A statement closes May 20, and payment is due June 15. Rosa makes a $200 purchase on May 22. On which statement will it first appear?

A. The statement that closes June 20

B. The statement that closed May 20

C. It will never appear

D. A separate bill mailed the next day

GO DEEPER 2 — Statement dates and payment timing

Question 2 of 5 · Learn and Apply

LEARN

The legal minimum time between mailing a statement and its due date is 21 days.

How many days are there from a May 20 closing date to a June 15 due date?

A. 26 days

B. 21 days

C. 15 days

D. 31 days

GO DEEPER 2 — Statement dates and payment timing

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

A payment counts when the issuer receives it. Paying a few days early avoids late fees from processing delays.

Rosa's payment is due June 15. Her bank says online payments take 1–2 business days to arrive. When should she pay to be safe?

A. On June 16

B. Exactly at 11:59 p.m. on June 15, the last minute

C. Any time in June

D. A few business days before June 15

GO DEEPER 2 — Statement dates and payment timing

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Most card issuers let you set autopay for the minimum, a fixed amount, or the full statement balance.

Which autopay setting guarantees the account is never late and never charged purchase interest?

A. Autopay for the minimum payment only, every month

B. Autopay for $10 a month

C. Autopay for the full statement balance

D. No autopay, paying when remembered

GO DEEPER 2 — Statement dates and payment timing

Question 5 of 5 · Learn and Apply

LEARN

The grace period on new purchases usually applies only when the previous statement balance was paid in full.

If Rosa pays $300 toward a $412.75 statement balance, what happens to the grace period on new purchases?

A. It stays the same, since she paid more than the minimum

B. It doubles

C. It applies only to purchases over $100

D. It is usually lost until she pays a full balance again

SET 37 · Credit Cards and Credit Scores

How credit card interest is calculated

MAIN skill: Calculate credit card interest using the daily periodic rate and the average daily balance

Outcome FL.CREDIT.37 · National topic: Managing Credit · NJSLS 9.1.12: CDM

Learning target: Calculate credit card interest and explain how payment timing affects it

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Weighted averages and daily rates (5 questions)
  Why: Average daily balance is a weighted average; students who average only the listed balances get it wrong.
- B2 · Math link → G6-S77-M (Grade 6 6.SP.B.5.c): Find the mean of a data set
  Why: Average daily balance is a (weighted) mean of daily balances.
- B3 · Math link → G6-S20-M (Grade 6 6.NS.B.3): Divide multi-digit decimals
  Why: The daily periodic rate divides the APR by 365.
- B4 · Math link → G6-S19-M (Grade 6 6.NS.B.3): Multiply multi-digit decimals
  Why: Interest multiplies the ADB, the daily rate, and the days.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Interest on a carried balance, month after month (5 questions)
- Go Deeper 2: How payments are applied to different APRs (5 questions)

Practical skills beyond the standards: Average daily balance calculation

Content status: time-sensitive

Source: CFPB (Credit CARD Act / Regulation Z) — Card issuers must mail statements at least 21 days before the due date; statements show the minimum payment warning; applicants under 21 need independent income or a cosigner. https://www.consumerfinance.gov/consumer-tools/credit-cards/answers/key-terms/

MAIN — Calculate credit card interest using the daily periodic rate and the average daily balance

Question 1 of 5 · Learn and Apply

LEARN

Most credit cards charge interest using a daily periodic rate (DPR): DPR = APR ÷ 365. Interest for a billing cycle ≈ average daily balance × DPR × number of days in the cycle.

A card has a 21.9% APR. What is the daily periodic rate (APR ÷ 365) as a percent?

A. 0.06%

B. 0.6%

C. 1.825%

D. 21.9%

MAIN — Calculate credit card interest using the daily periodic rate and the average daily balance

Question 2 of 5 · Learn and Apply

LEARN

The average daily balance (ADB) is the sum of each day's balance divided by the number of days in the cycle. When balances last different numbers of days, weight each balance by its days.

In a 30-day cycle, a card balance is $500 for 10 days, $800 for 10 days (after a $300 purchase), and $600 for 10 days (after a $200 payment). What is the average daily balance?

A. $600.00

B. $633.33

C. $650.00

D. $1,900.00

MAIN — Calculate credit card interest using the daily periodic rate and the average daily balance

Question 3 of 5 · Learn and Apply

LEARN

Interest for a billing cycle = average daily balance × (APR ÷ 365) × days in the cycle.

Using an average daily balance of $633.33, a 21.9% APR, and a 30-day cycle, what is the interest charge (nearest cent)?

A. $0.38

B. $11.40

C. $11.56

D. $138.70

MAIN — Calculate credit card interest using the daily periodic rate and the average daily balance

Question 4 of 5 · Learn and Apply

LEARN

With the average daily balance method, the balance on every day of the cycle counts, so timing of payments and purchases matters.

How would making the $200 payment on day 11 instead of day 21 change that cycle's interest?

A. Lower it, because the balance is lower for more days

B. Raise it, because payments add interest

C. No change at all, because only the ending balance matters

D. Double it

MAIN — Calculate credit card interest using the daily periodic rate and the average daily balance

Question 5 of 5 · Knowledge Check

Which choice is the daily periodic rate for a 18.25% APR card?

A. 0.05%

B. 0.5%

C. 1.52%

D. 18.25%

BACKWARD B1 · concept review — Weighted averages and daily rates

Question 1 of 5 · Learn and Apply

LEARN

A weighted average multiplies each value by how long it lasts, adds, then divides by the total time.

A balance is $100 for 20 days and $400 for 10 days. Which calculation gives the average daily balance over 30 days?

A. (100 + 400) ÷ 2

B. (100 + 400) ÷ 30

C. (100 × 20 + 400 × 10) ÷ 30

D. 100 × 20 + 400 × 10

BACKWARD B1 · concept review — Weighted averages and daily rates

Question 2 of 5 · Learn and Apply

LEARN

Average daily balance = (balance × days, added for each period) ÷ total days.

What is the average daily balance in that example (a balance of $100 for 20 days and $400 for 10 days)?

A. $16.67

B. $200

C. $250

D. $6,000

BACKWARD B1 · concept review — Weighted averages and daily rates

Question 3 of 5 · Learn and Apply

LEARN

Daily rate = APR ÷ 365.

An APR of 36.5% is how much per day (APR ÷ 365)?

A. 0.1%

B. 1%

C. 3.04%

D. 36.5%

BACKWARD B1 · concept review — Weighted averages and daily rates

Question 4 of 5 · Learn and Apply

LEARN

Interest = balance × daily rate × days.

A balance of $1,000 at 0.1% per day for 30 days earns about how much interest (simple)?

A. $1

B. $3

C. $30

D. $300

BACKWARD B1 · concept review — Weighted averages and daily rates
Question 5 of 5 · Knowledge Check

Which lowers a cycle's interest the MOST, if the amount is the same?

A. Paying early in the cycle
B. Paying on the last day of the cycle
C. Making purchases early in the cycle
D. Paying after the due date

GO DEEPER 1 — Interest on a carried balance, month after month

Question 1 of 5 · Learn and Apply

LEARN

When a balance is carried and not paid, interest is added to the balance, and next month interest is charged on the larger balance (compounding).

Ivy carries $1,000 at 24% APR and makes no payments or purchases. About how much interest is added after one month (APR ÷ 12)?

A. $2

B. $20

C. $24

D. $240

GO DEEPER 1 — Interest on a carried balance, month after month

Question 2 of 5 · Learn and Apply

LEARN

With monthly compounding, each month's interest is figured on the balance including earlier interest.

Ivy carries $1,000 at 2% per month with no payments or purchases. What is the balance after two months of compounding?

A. $1,020.00

B. $1,040.00

C. $1,040.40

D. $1,480.00

GO DEEPER 1 — Interest on a carried balance, month after month

Question 3 of 5 · Knowledge Check

After 12 months at 2% per month with no payments, what is a $1,000 balance (nearest cent)?

A. $1,024.00

B. $1,200.00

C. $1,240.00

D. $1,268.24

GO DEEPER 1 — Interest on a carried balance, month after month

Question 4 of 5 · Learn and Apply

LEARN

Effective annual rate = (1 + monthly rate)^12 − 1.

What effective annual rate does 2% per month compounded produce (nearest tenth of a percent)?

A. 2.0%

B. 24.0%

C. 26.8%

D. 28.0%

GO DEEPER 1 — Interest on a carried balance, month after month

Question 5 of 5 · Knowledge Check

Why does a carried credit card balance grow even without new purchases?

A. Card issuers add a monthly bonus

B. The credit limit grows

C. Interest is added and then charged interest itself

D. The APR rises a little every month under federal law

GO DEEPER 2 — How payments are applied to different APRs

Question 1 of 5 · Learn and Apply

LEARN

When a card has balances with different APRs, the Credit CARD Act requires issuers to apply payments above the minimum to the balance with the highest APR first. The minimum itself can be applied however the issuer chooses.

A card has $1,000 at a 0% promotional APR and $500 at a 22% purchase APR. Ella pays $300, of which $40 is the minimum. Under federal rules, where must the amount ABOVE the minimum go?

A. To the 0% balance first

B. Split evenly between both

C. To fees only

D. To the 22% balance first

GO DEEPER 2 — How payments are applied to different APRs

Question 2 of 5 · Learn and Apply

LEARN

Payments above the minimum must be applied to the highest-APR balance first.

Under that rule, how much of Ella's $300 payment (minimum $40) goes toward the 22% balance at least?

A. $40

B. $150

C. $260

D. $300

GO DEEPER 2 — How payments are applied to different APRs

Question 3 of 5 · Knowledge Check

Why does this payment rule help cardholders?

A. It raises the promotional rate

B. It removes the minimum payment

C. It lets card issuers charge more interest on old balances

D. It reduces the most expensive balance first

GO DEEPER 2 — How payments are applied to different APRs

Question 4 of 5 · Learn and Apply

LEARN

Monthly interest on a carried balance ≈ balance × (APR ÷ 12).

Ella's $500 at 22% APR is paid off. About how much interest per month does that save compared with carrying it (APR ÷ 12)?

A. $0.92

B. $9.17

C. $22.00

D. $110.00

GO DEEPER 2 — How payments are applied to different APRs

Question 5 of 5 · Knowledge Check

Which balance should a cardholder target first with extra payments, if allowed to choose?

A. The newest balance

B. The balance that is oldest, regardless of rate

C. The highest-APR balance

D. The 0% balance

SET 38 · Credit Cards and Credit Scores

The minimum payment trap

MAIN skill: Compare the cost of paying the minimum with paying more each month

Outcome FL.CREDIT.38 · National topic: Managing Credit · NJSLS 9.1.12: CDM

Learning target: Explain the cost of paying only the minimum and plan to repay credit card debt

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: A payment is split between interest and balance (5 questions)
  Why: The trap makes sense only when students see how little of a minimum payment reduces the balance.
- B2 · Math link → G7-S29-M (Grade 7 7.EE.B.3): Solve multistep problems with positive and negative rational numbers in any form
  Why: Minimum payments combine percent, interest, and subtraction steps.
- B3 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Minimums and interest are percents of the balance.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Building a payoff plan (5 questions)
- Go Deeper 2: Credit card statement detective (5 questions)

Practical skills beyond the standards: Building a fixed-payment payoff plan

Content status: stable

MAIN — Compare the cost of paying the minimum with paying more each month

Question 1 of 5 · Learn and Apply

LEARN

Many cards set the minimum payment as a small percent of the balance plus the month's interest (with a dollar floor, such as $25). A small minimum keeps the account current but pays off the balance very slowly.

Kai owes $3,000 at 20% APR. His card's minimum payment is 1% of the balance plus that month's interest. What is his first minimum payment?

A. $30

B. $50

C. $80

D. $600

MAIN — Compare the cost of paying the minimum with paying more each month

Question 2 of 5 · Learn and Apply

LEARN

Each payment first covers that month's interest; only the rest reduces the balance.

Of Kai's first $80 minimum payment on a $3,000 balance at 20% APR, how much actually reduces the balance?

A. $0

B. $30

C. $50

D. $80

MAIN — Compare the cost of paying the minimum with paying more each month

Question 3 of 5 · Learn and Apply

LEARN

Because minimum payments shrink as the balance shrinks, paying only the minimum can take many years.

Paying only that shrinking minimum each month, a computer model shows Kai's $3,000 takes 176 months and costs $6,983.44 in total. About how many years is that?

A. About 14.7 years

B. About 1.8 years

C. About 176 years

D. About 3 years

MAIN — Compare the cost of paying the minimum with paying more each month

Question 4 of 5 · Learn and Apply

LEARN

Paying a fixed amount above the minimum shortens payoff time and cuts total interest dramatically.

Paying only the minimum, Kai pays $6,983.44 in total for a $3,000 balance. Paying a fixed $150 a month instead, he pays $3,679.82. How much interest does the $150 plan save?

A. $679.82

B. $3,000.00

C. $3,303.62

D. $3,983.44

MAIN — Compare the cost of paying the minimum with paying more each month

Question 5 of 5 · Knowledge Check

Which statement about minimum payments is TRUE?

A. They avoid late fees but repay very slowly
B. They pay off the whole balance in about a year
C. They are the cheapest way to repay
D. They stop interest from being charged

BACKWARD B1 · concept review — A payment is split between interest and balance

Question 1 of 5 · Learn and Apply

LEARN

Each payment first covers the month's interest. The remainder reduces what you owe.

A $40 payment includes $25 of interest. How much goes to the balance?

A. $15

B. $25

C. $40

D. $65

BACKWARD B1 · concept review — A payment is split between interest and balance

Question 2 of 5 · Learn and Apply

LEARN

Monthly interest ≈ balance × APR ÷ 12.

A $2,000 balance at 18% APR. What is one month's interest (APR ÷ 12)?

A. $3

B. $18

C. $30

D. $360

BACKWARD B1 · concept review — A payment is split between interest and balance

Question 3 of 5 · Learn and Apply

LEARN

Paying only the interest leaves the principal unchanged.

If the payment equals the month's interest exactly, what happens to the balance?

A. It goes to zero

B. It is cut in half

C. It stays the same

D. It doubles

BACKWARD B1 · concept review — A payment is split between interest and balance

Question 4 of 5 · Knowledge Check

Which payment reduces a $1,000 balance the most if interest is $15 this month?

A. $15

B. $25

C. $50

D. $200

BACKWARD B1 · concept review — A payment is split between interest and balance

Question 5 of 5 · Knowledge Check

Why do small minimum payments make repayment slow?

A. The card issuer ignores payments below a set amount

B. Balances are not reduced by law

C. Minimums are paid to the store

D. Most of each payment goes to interest

GO DEEPER 1 — Building a payoff plan

Question 1 of 5 · Learn and Apply

LEARN

A fixed payment that is higher than the minimum sets a clear payoff date. Small increases in the payment can save a lot of interest.

A computer model shows $3,000 at 20% APR is paid off in 42 months at $100 a month (total paid $4,193.50) or 25 months at $150 a month (total paid $3,679.82). How much more interest does the $100 plan cost than the $150 plan?

A. $50.00

B. $513.68

C. $679.82

D. $1,193.50

GO DEEPER 1 — Building a payoff plan

Question 2 of 5 · Learn and Apply

LEARN

At 0% interest, payment = balance ÷ months.

Kai wants to pay off $1,200 at 0% APR in 8 months. What fixed monthly payment does he need?

A. $100

B. $120

C. $150

D. $9,600

GO DEEPER 1 — Building a payoff plan

Question 3 of 5 · Knowledge Check · Practical how-to

Which step should come with a payoff plan to keep the balance from growing again?

A. Raise the credit limit

B. Open another card

C. Stop adding new charges to the card

D. Pay late some months to keep more cash on hand

GO DEEPER 1 — Building a payoff plan

Question 4 of 5 · Learn and Apply

LEARN

Statements show the total cost of a 3-year payoff plan alongside the cost of paying only the minimum.

A card's statement shows: "If you pay $106 each month, you will pay off the balance in 3 years and pay $3,816." The balance is $3,000. What is the interest under the 3-year plan?

A. $106

B. $816

C. $3,000

D. $3,816

GO DEEPER 1 — Building a payoff plan

Question 5 of 5 · Knowledge Check

What is a sensible first move for someone with a large card balance and a small emergency fund?

A. Keep a small cushion and pay well above the minimum

B. Pay only the minimum forever

C. Spend the cushion on wants

D. Skip card payments for a few months to build savings

GO DEEPER 2 — Credit card statement detective

Question 1 of 5 · Learn and Apply

LEARN

On a statement, the interest charge is the cost of carrying a balance from the last cycle.

A statement shows: Previous balance $1,000; Payment −$50; Purchases +$120; Interest +$19; New balance $1,089. Which line shows the cost of carrying a balance?

A. Purchases +$120

B. Payment −$50

C. Previous balance $1,000

D. Interest +$19

GO DEEPER 2 — Credit card statement detective

Question 2 of 5 · Learn and Apply

LEARN

New balance = previous balance − payments + purchases + fees + interest.

Check the statement: $1,000 − $50 + $120 + $19 = ?

A. $931

B. $1,069

C. $1,089

D. $1,189

GO DEEPER 2 — Credit card statement detective

Question 3 of 5 · Learn and Apply

LEARN

A balance grows whenever new charges plus interest are larger than payments.

On a statement with a previous balance of $1,000, a $50 payment, and $120 of new purchases, the balance rose to $1,089. What does this show?

A. The card issuer made an error in adding up the balance

B. Payments increase balances

C. The APR must be 0%

D. Payments are smaller than new charges plus interest

GO DEEPER 2 — Credit card statement detective

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Fees charged in error are billing errors that can be disputed with the card issuer.

A statement line reads "Late fee $30" though the payment was on time according to the bank's records. What should the cardholder do?

A. Call the issuer and, if needed, dispute it in writing

B. Pay it and ignore it

C. Stop paying the card entirely until the fee is removed

D. Report it to the IRS

GO DEEPER 2 — Credit card statement detective

Question 5 of 5 · Learn and Apply

LEARN

Refunds appear as credits that lower the balance.

Which statement line would show money returned for an item Ana sent back?

A. A new purchase

B. Interest charged on the remaining balance

C. A credit, shown with a minus sign

D. A fee

SET 39 · Credit Cards and Credit Scores

Card fees, balance transfers, and promotional offers

MAIN skill: Calculate card fees and compare balance transfers, 0% APR offers, and deferred interest

Outcome FL.CREDIT.39 · National topic: Managing Credit · NJSLS 9.1.12: CDM
Learning target: Compare credit card fees and promotional offers

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Percent fees on balances (5 questions)
  Why: Card fees are mostly percents of an amount; computing them is the core skill.
- B2 · Math link → G7-S65-M (Grade 7 7.RP.A.3): Find a percent fee and the total with the fee
  Why: Transfer, cash advance, and foreign transaction fees are percent fees.
- B3 · Math link → G7-S07-M (Grade 7 7.RP.A.3): Solve multistep ratio problems
  Why: Comparing a transfer requires interest over months and a fee.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Deferred interest versus a true 0% intro APR (5 questions)
- Go Deeper 2: Using a balance transfer wisely (5 questions)

Practical skills beyond the standards: Balance transfer decision; Recognizing deferred interest

Content status: time-sensitive
Source: CFPB — With deferred interest, if the promotional balance is not paid in full by the end of the period, interest is charged back to the purchase date.
https://www.consumerfinance.gov/about-us/blog/cfpb-warns-consumers-about-deferred-interest-promotions/

MAIN — Calculate card fees and compare balance transfers, 0% APR offers, and deferred interest

Question 1 of 5 · Learn and Apply

LEARN

A balance transfer moves debt from one card to another, often to get a low promotional APR. Most transfers charge a fee, commonly 3% to 5% of the amount moved. The low rate lasts only for the promotional period.

Nia moves a $4,000 balance at 22% APR to a new card with 0% APR for 15 months and a 3% balance transfer fee. What is the fee?

A. $12

B. $120

C. $880

D. $1,200

MAIN — Calculate card fees and compare balance transfers, 0% APR offers, and deferred interest

Question 2 of 5 · Learn and Apply

LEARN

Compare the cost of staying with the cost of transferring: interest avoided minus the transfer fee.

Leaving $4,000 at 22% APR for 15 months would cost about $1,100 in interest (simple estimate). The transfer costs a $120 fee at 0% APR. About how much does the transfer save if Nia pays it off within 15 months?

A. $120

B. $980

C. $1,100

D. $1,220

MAIN — Calculate card fees and compare balance transfers, 0% APR offers, and deferred interest

Question 3 of 5 · Learn and Apply

LEARN

A genuine introductory 0% APR charges no interest during the promotion. After it ends, the remaining balance is charged the regular APR going forward.

Nia's 0% transfer period ends in 15 months. What happens to any balance left after that?

A. It is forgiven by the card issuer

B. It stays at 0% forever

C. It moves back to the old card automatically at its old rate

D. It starts being charged the card's regular APR

MAIN — Calculate card fees and compare balance transfers, 0% APR offers, and deferred interest

Question 4 of 5 · Learn and Apply

LEARN

Deferred interest is different from a true 0% APR. Interest builds up in the background from the purchase date. If the full promotional balance is not paid by the deadline, all of that interest can be charged at once.

A store card says "No interest if paid in full within 12 months" on a $1,200 TV. This is deferred interest. Ana pays $1,190 by the deadline. What happens?

A. She can owe all interest since the purchase date

B. She pays interest only on the remaining $10

C. Nothing is charged, since she paid almost all of it

D. The store refunds her payments

MAIN — Calculate card fees and compare balance transfers, 0% APR offers, and deferred interest

Question 5 of 5 · Learn and Apply

LEARN

Some cards charge a foreign transaction fee, often about 3%, on purchases made in another currency or processed abroad. Other cards charge none.

Lin uses her card abroad and spends $2,500. Her card charges a 3% foreign transaction fee. How much is the fee?

A. $7.50

B. $75

C. $750

D. $2,575

BACKWARD B1 · concept review — Percent fees on balances

Question 1 of 5 · Learn and Apply

LEARN

A percent fee = amount × rate (as a decimal).

A fee is 4% of $500. What is the fee?

A. $2

B. $20

C. $200

D. $520

BACKWARD B1 · concept review — Percent fees on balances

Question 2 of 5 · Learn and Apply

LEARN

Common card fees: annual fee (yearly), late fee (late payment), cash advance fee, balance transfer fee, and foreign transaction fee.

Which is a one-time fee charged when moving a balance from one card to another?

A. An annual membership fee

B. A late fee

C. A balance transfer fee

D. Interest

BACKWARD B1 · concept review — Percent fees on balances

Question 3 of 5 · Learn and Apply

LEARN

To compare a yearly fee with monthly costs, divide by 12.

A card has a $95 annual fee. About how much is that per month?

A. $7.92

B. $9.50

C. $95.00

D. $1,140.00

BACKWARD B1 · concept review — Percent fees on balances

Question 4 of 5 · Learn and Apply

LEARN

A 0% introductory APR means no interest during the promotion. Minimum payments are still required each month.

What does "0% APR for 12 months" mean on a new card?

A. No payments of any kind are required for 12 months

B. The card has no fees ever

C. No interest on qualifying balances for 12 months

D. Interest is charged only after 12 years

BACKWARD B1 · concept review — Percent fees on balances

Question 5 of 5 · Knowledge Check

Which fee would a cardholder who always pays on time and never travels abroad most likely avoid?

A. Every fee, including the annual fee

B. Interest on balances carried over

C. Balance transfer fees when transferring

D. Late fees and foreign transaction fees

GO DEEPER 1 — Deferred interest versus a true 0% intro APR

Question 1 of 5 · Learn and Apply

LEARN

True 0% APR: interest starts only on what remains after the promotion ends. Deferred interest: interest builds from the purchase date and is charged in full if any promotional balance remains at the deadline.

Card X offers a true 0% intro APR for 12 months. Card Y offers deferred interest for 12 months at 26.99%. Both have $1,200 purchases and $100 left at month 12. Which statement is TRUE?

A. Only Card Y can charge a year of back interest

B. Both charge the same interest

C. Card Y charges less because its rate is deferred

D. Neither charges any interest ever

GO DEEPER 1 — Deferred interest versus a true 0% intro APR

Question 2 of 5 · Learn and Apply

LEARN

Deferred interest is all-or-nothing: if any promotional balance remains at the deadline, all the accrued interest can be added.

Ana's deferred-interest statements show $230 of "accrued interest" building over 12 months. She leaves $10 unpaid at the deadline. How much interest is likely added?

A. $0

B. $2.70

C. $10

D. $230

GO DEEPER 1 — Deferred interest versus a true 0% intro APR

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

With deferred interest, minimum payments are often too small to pay the promotional balance in time. Divide the balance by the months available.

To avoid deferred interest on a $1,200 purchase over 12 months, what monthly amount pays it off in time?

A. $25

B. $100

C. $120

D. $1,200

GO DEEPER 1 — Deferred interest versus a true 0% intro APR

Question 4 of 5 · Learn and Apply

LEARN

"If paid in full" wording usually means deferred interest. "0% intro APR" usually means interest-free during the period.

Which phrase in an ad signals DEFERRED interest rather than a true 0% APR?

A. "No interest if paid in full within 12 months"

B. "0% intro APR on purchases for 12 months"

C. "Regular APR 21.99%"

D. "No annual fee"

GO DEEPER 1 — Deferred interest versus a true 0% intro APR

Question 5 of 5 · Learn and Apply

LEARN

Minimum payments are set as a small share of the balance, not as the amount needed to pay off a promotional balance by its deadline.

Why are minimum payments on deferred-interest plans risky?

A. They pay off the promo balance before the end date

B. They cancel the promotion as soon as one is made

C. They stop interest from ever being charged

D. They may not clear the promo balance in time

GO DEEPER 2 — Using a balance transfer wisely

Question 1 of 5 · Learn and Apply

LEARN

To finish during the promotion: monthly payment = total to repay ÷ months in the promotion.

Nia must pay off $4,120 (balance plus fee) during a 15-month 0% period. What monthly payment does that require (nearest cent)?

A. $266.67

B. $274.67

C. $343.33

D. $412.00

GO DEEPER 2 — Using a balance transfer wisely

Question 2 of 5 · Learn and Apply

LEARN

At 0% APR, the balance falls by exactly the amount paid.

If Nia pays only $150 a month on the $4,120 during the 15-month 0% period, how much remains when the promotion ends?

A. $0

B. $1,870

C. $2,250

D. $3,970

GO DEEPER 2 — Using a balance transfer wisely

Question 3 of 5 · Learn and Apply

LEARN

A balance transfer only helps if the debt shrinks. New spending can rebuild the old balance while the transferred one is being paid.

Which habit can undo the benefit of a balance transfer?

A. Paying more than the minimum

B. Setting up autopay

C. Running up new charges on the old card

D. Tracking the date the promotion ends each month

GO DEEPER 2 — Using a balance transfer wisely

Question 4 of 5 · Learn and Apply

LEARN

Compare the interest avoided during the promotion with the transfer fee.

A transfer offer: 0% for 6 months, 5% fee. Debt: $2,000 at 18% APR. About how much would 6 months at 18% cost (simple), and is the transfer worth it?

A. About $360 vs $100; never worth it

B. About $18 vs $100; always worth it

C. About $180 vs $10; worth it

D. About $180 in interest vs a $100 fee; worth it if paid off in 6 months

GO DEEPER 2 — Using a balance transfer wisely

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Three numbers decide whether a transfer saves money: the transfer fee, how long the promotional rate lasts, and the rate afterward.

Which fact should Nia check BEFORE transferring?

A. Only the new card's credit limit

B. Only the rewards points

C. The fee, promo length, and later APR

D. Only whether the new card has an annual fee

SET 40 · Credit Cards and Credit Scores

Source: FTC — Credit freezes are free at each of the three nationwide credit bureaus. https://consumer.ftc.gov/articles/what-know-about-credit-freezes-fraud-alerts

MAIN — Explain what credit reports contain, get free reports, and dispute errors

Question 1 of 5 · Learn and Apply

LEARN

A credit report is a record of how you have used credit: accounts, balances, payment history, and some collections. Three nationwide credit bureaus (consumer reporting agencies) keep reports: Equifax, Experian, and TransUnion.

Which company is one of the three nationwide credit bureaus?

A. Experian

B. The Federal Reserve

C. The IRS

D. Visa

MAIN — Explain what credit reports contain, get free reports, and dispute errors

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Federal law gives you free credit reports. The official site is AnnualCreditReport.com, where free reports from all three bureaus are available (weekly, under a permanent program).

Where can Jordan get free credit reports from all three bureaus?

A. Any website that advertises "free credit score"

B. The bank where Jordan opened checking

C. The IRS website

D. AnnualCreditReport.com

MAIN — Explain what credit reports contain, get free reports, and dispute errors

Question 3 of 5 · Learn and Apply

LEARN

Credit reports show identifying information, credit accounts (cards, loans), balances, credit limits, payment history, inquiries, and certain collections. They do not include income, bank balances, race, religion, or medical details.

Which item is generally on a credit report?

A. Whether card payments were on time

B. Your income and salary

C. Your race or religion

D. Your bank account balances

MAIN — Explain what credit reports contain, get free reports, and dispute errors

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

If a report has an error, you can dispute it with the credit bureau (and the company that reported it). The bureau generally must investigate, usually within 30 days. An account you never opened can be a sign of identity theft.

Jordan's report lists a credit card she never opened. What should she do?

A. Ignore it, since reports are always correct

B. Pay off the card to make it go away

C. Dispute it and check for identity theft

D. Ignore it if her score still looks fine

MAIN — Explain what credit reports contain, get free reports, and dispute errors

Question 5 of 5 · Learn and Apply

LEARN

Under the Fair Credit Reporting Act, only those with a "permissible purpose" can see your report: lenders, insurers, landlords, and employers (with your written permission), among others.

Who may legally see Jordan's credit report?

A. A lender reviewing her application

B. Any curious neighbor who wants to know

C. A classmate who asks

D. A social media follower

BACKWARD B1 · concept review — What "credit history" means

Question 1 of 5 · Learn and Apply

LEARN

Your credit history shows how you have handled borrowing: which accounts you have, how much you owe, and whether you paid on time.

What is a credit history?

A. A list of every purchase a person has made with cash

B. A list of a person's bank account balances

C. A record of how a person has borrowed and repaid

D. A record of a person's income each year

BACKWARD B1 · concept review — What "credit history" means

Question 2 of 5 · Learn and Apply

LEARN

Credit accounts such as loans and credit cards are reported to credit bureaus. Cash and debit purchases usually are not.

Which activity adds to a person's credit history?

A. Paying cash for groceries

B. Using a debit card

C. Saving money in a piggy bank

D. Repaying a car loan on time

BACKWARD B1 · concept review — What "credit history" means

Question 3 of 5 · Learn and Apply

LEARN

Past repayment behavior helps lenders estimate the risk that a borrower will not repay.

Why do lenders look at credit history?

A. To learn which stores a borrower likes best

B. To set the borrower's salary

C. To decide the borrower's taxes

D. To predict whether a borrower will repay

BACKWARD B1 · concept review — What "credit history" means

Question 4 of 5 · Learn and Apply

LEARN

People with few or no credit accounts have "thin" files, which makes it harder for lenders to judge them.

A student with no loans or cards applies for credit. What problem might she face?

A. A "thin" credit file with little history to judge

B. Her report will show many late payments from the past

C. She will be approved for any amount

D. She has a perfect score by default

BACKWARD B1 · concept review — What "credit history" means

Question 5 of 5 · Learn and Apply

LEARN

Credit history can affect renting an apartment, insurance prices in many states, and some job applications (with written permission).

Besides lenders, who else may check credit history (with permission when required)?

A. Movie theaters

B. Grocery store cashiers at checkout

C. Landlords and insurers

D. Classmates

GO DEEPER 1 — Reading a credit report line by line

Question 1 of 5 · Learn and Apply

LEARN

Credit report account lines show the creditor, limit or loan amount, balance, and payment status by month. Late payments are usually reported once they are 30 or more days past due.

A report line shows: "Card A — limit $2,000 — balance $600 — status: 30 days late (March)". What does "30 days late" mean?

A. The card was opened 30 days ago

B. The card has 30 days of interest-free time each month

C. The balance is $30

D. A payment was at least 30 days past due in March

GO DEEPER 1 — Reading a credit report line by line

Question 2 of 5 · Learn and Apply

LEARN

A hard inquiry happens when a lender checks your credit because you applied for credit; it can lower scores slightly for a short time. Soft inquiries, such as checking your own report or prescreened offers, do not affect scores.

A report shows two "hard inquiries" from lenders this month. What caused them?

A. Applications for new credit

B. Checking your own report

C. Receiving a preapproved offer in the mail

D. Paying a bill on time

GO DEEPER 1 — Reading a credit report line by line

Question 3 of 5 · Learn and Apply

LEARN

Soft inquiries, including checking your own credit, do not affect credit scores.

Which inquiry does NOT affect a credit score?

A. Applying for a car loan

B. Applying for a credit card

C. Checking your own credit report

D. Applying for a private student loan

GO DEEPER 1 — Reading a credit report line by line

Question 4 of 5 · Learn and Apply

LEARN

Paying a collection usually updates its status to "paid," but the record can remain for the reporting period allowed by law.

A report shows a collection account that Ana paid in full 2 years ago. What should it show now?

A. The collection, updated to show it was paid

B. Nothing; paid collections vanish immediately

C. A new unpaid collection

D. A higher balance

GO DEEPER 1 — Reading a credit report line by line

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Lenders choose which bureaus to report to, and reporting dates differ, so the three reports may not match exactly.

Ana reviews her reports from all three bureaus. Why might they differ?

A. One of them must be fake

B. Bureaus copy each other's reports exactly every day

C. Each bureau uses a different person's data

D. Not every lender reports to every bureau

GO DEEPER 2 — Freezes, fraud alerts, and identity protection

Question 1 of 5 · Learn and Apply

LEARN

A credit freeze (security freeze) restricts access to your credit report, so identity thieves cannot easily open new accounts in your name. Freezes are free at each bureau, and you can lift them temporarily when you apply for credit.

What does a credit freeze do?

A. It lowers your credit score

B. It closes your existing cards

C. It blocks most new lenders from seeing your report

D. It stops you from using your own debit card or checks

GO DEEPER 2 — Freezes, fraud alerts, and identity protection

Question 2 of 5 · Learn and Apply

LEARN

Since 2018, federal law has required the nationwide credit bureaus to place and lift credit freezes for free.

How much does it cost to place a credit freeze at a nationwide bureau?

A. $10 per bureau each year

B. $100 one time

C. A fee of 1% of your total credit limit

D. Nothing; freezes are free by law

GO DEEPER 2 — Freezes, fraud alerts, and identity protection

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

You can lift a freeze temporarily for a specific time or lender, then it returns.

Ana froze her credit and now wants to apply for a car loan. What should she do?

A. Lift the freeze for a short time

B. Delete her credit history

C. Apply under a friend's name

D. Nothing; lenders can see frozen reports

GO DEEPER 2 — Freezes, fraud alerts, and identity protection

Question 4 of 5 · Learn and Apply

LEARN

A fraud alert asks lenders to take extra steps to verify your identity before opening credit. A credit freeze blocks most access to your report.

How is a fraud alert different from a credit freeze?

A. An alert closes your existing accounts

B. A freeze costs money; an alert is free

C. An alert asks for ID checks; a freeze blocks access

D. They are identical; both close your current accounts

GO DEEPER 2 — Freezes, fraud alerts, and identity protection

Question 5 of 5 · Knowledge Check · Practical how-to

Which teen habit best protects future credit?

A. Posting a full birth date and address online

B. Sharing passwords with friends

C. Using the same password everywhere

D. Keeping a Social Security number private

SET 41 · Credit Cards and Credit Scores

Credit scores

MAIN skill: Explain the factors that affect credit scores and how scores affect borrowing costs

Outcome FL.CREDIT.41 · National topic: Managing Credit · NJSLS 9.1.12: CP

Learning target: Explain factors that affect credit scores and how scores affect the cost of credit

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Percent weights and parts of a whole (5 questions)
  - Why: Score factors are percents of a whole; students compare their weights.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  - Why: Score factors and rates are percents.
- B3 · Math link → G7-S25-M (Grade 7 7.NS.A.3): Solve real-world problems with the four operations on rational numbers
  - Why: Comparing loan offers multiplies payment differences by months.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Scores, insurance, renting, and jobs (5 questions)
- Go Deeper 2: Myths about credit scores (5 questions)

Practical skills beyond the standards: Busting common credit score myths

Content status: time-sensitive

Source: myFICO (Fair Isaac Corporation) — FICO score factor weights: payment history 35%, amounts owed 30%, length of credit history 15%, new credit 10%, credit mix 10%; scores range 300-850.
https://www.myfico.com/credit-education/whats-in-your-credit-score

MAIN — Explain the factors that affect credit scores and how scores affect borrowing costs

Question 1 of 5 · Learn and Apply

LEARN

A credit score is a number (often 300–850) that summarizes credit risk based on a credit report. FICO's general weights: payment history about 35%, amounts owed about 30%, length of credit history about 15%, new credit about 10%, and credit mix about 10%. Other scoring models exist.

In the widely used FICO model, which factor has the LARGEST weight?

A. Payment history (about 35%)

B. Credit mix (about 10%)

C. New credit (about 10%)

D. Length of credit history (about 15%)

MAIN — Explain the factors that affect credit scores and how scores affect borrowing costs

Question 2 of 5 · Learn and Apply

LEARN

Credit scores affect the interest rates lenders offer. A higher score usually means a lower rate, which lowers monthly payments and total cost.

Two applicants want a $20,000, 5-year car loan. Applicant A (strong credit) is offered 6% APR, with a $386.66 payment; Applicant B is offered 12% APR, with a $444.89 payment. How much more does B pay over 5 years?

A. $58.23

B. $1,200.00

C. $3,493.80

D. $26,693.40

MAIN — Explain the factors that affect credit scores and how scores affect borrowing costs

Question 3 of 5 · Learn and Apply

LEARN

Scores reward on-time payments and low balances compared with limits, and can drop with late payments, high balances, and many new applications.

Which action is MOST likely to raise a credit score over time?

A. Opening several new cards in one month

B. Maxing out a credit card

C. Paying every bill on time

D. Closing your oldest account

MAIN — Explain the factors that affect credit scores and how scores affect borrowing costs

Question 4 of 5 · Learn and Apply

LEARN

Credit scores use only information in credit reports. Income, employment, savings, age, race, and where you live are not part of the score.

Ana and Ben have identical credit reports, but Ben earns twice as much. How do their FICO scores likely compare?

A. Ben's is much higher

B. Ana's is higher because she borrows more of her income

C. They are about the same

D. Ben's is lower because higher earners spend more

MAIN — Explain the factors that affect credit scores and how scores affect borrowing costs

Question 5 of 5 · Knowledge Check

Ivy's FICO score is 780; Max's is 580. Which statement is MOST accurate?

A. Max will pay lower rates, since lower is better

B. Both will get identical offers

C. Scores do not affect borrowing

D. Max will likely face higher rates or denials

BACKWARD B1 · concept review — Percent weights and parts of a whole

Question 1 of 5 · Learn and Apply

LEARN

Parts of a whole are added to find a combined share.

If payment history is 35% of a score and amounts owed is 30%, together they make up what percent?

A. 5%

B. 35%

C. 65%

D. 1,050%

BACKWARD B1 · concept review — Percent weights and parts of a whole

Question 2 of 5 · Learn and Apply

LEARN

Percents of the same whole can be compared directly.

Which is larger: 15% or 10%?

A. 15%

B. 10%

C. They are equal

D. It cannot be compared

BACKWARD B1 · concept review — Percent weights and parts of a whole

Question 3 of 5 · Knowledge Check

Five factors weigh 35%, 30%, 15%, 10%, and 10%. What is their total?

A. 75%

B. 90%

C. 100%

D. 110%

BACKWARD B1 · concept review — Percent weights and parts of a whole

Question 4 of 5 · Knowledge Check

A score went from 650 to 700. By how many points did it rise?

A. 0

B. 7

C. 50

D. 1,350

BACKWARD B1 · concept review — Percent weights and parts of a whole

Question 5 of 5 · Learn and Apply

LEARN

FICO's five factors: payment history (paying on time), amounts owed (balances and utilization), length of credit history (age of accounts), new credit (recent applications), and credit mix (types of accounts).

Maya's oldest card is 2 years old; her friend's is 15 years old. Both pay on time and owe little. Which score factor most likely favors her friend?

A. Payment history

B. Amounts owed

C. Credit mix

D. Length of credit history

GO DEEPER 1 — Scores, insurance, renting, and jobs

Question 1 of 5 · Learn and Apply

LEARN

Landlords often review credit reports or scores because past bill-paying predicts rent payment.

A landlord checks Tia's credit before approving an apartment. Why?

A. To predict whether she will pay rent on time

B. To see her school grades

C. To check her medical history and recent doctor visits

D. To learn her income

GO DEEPER 1 — Scores, insurance, renting, and jobs

Question 2 of 5 · Learn and Apply

LEARN

Many insurers use credit-based insurance scores to help set prices, where state law allows.

In many states, auto insurers use credit-based insurance scores. What does this mean for drivers with weaker credit?

A. They pay lower premiums

B. They cannot buy insurance

C. They may pay higher premiums

D. Their driving record is ignored

GO DEEPER 1 — Scores, insurance, renting, and jobs

Question 3 of 5 · Learn and Apply

LEARN

Employers may review credit reports (not scores) for some jobs, but federal law requires your written permission. Some states limit this further.

An employer wants to check Tia's credit report for a job. What must happen first?

A. Nothing; employers can check anyone

B. Tia must pay a fee

C. The employer must pay Tia's credit card bill

D. Tia must give written permission

GO DEEPER 1 — Scores, insurance, renting, and jobs

Question 4 of 5 · Learn and Apply

LEARN

Over long loans, a small rate difference adds up: extra cost = monthly difference × number of payments.

A 100-point lower score raises a $250,000 mortgage rate from 6.5% to 7.5%. Payments rise from $1,580 to $1,748 a month. How much more is paid over 30 years?

A. $168

B. $2,016

C. $2,500

D. $60,480

GO DEEPER 1 — Scores, insurance, renting, and jobs

Question 5 of 5 · Learn and Apply

LEARN

FICO and VantageScore both make several versions, and each bureau's data differs, so scores vary.

Which statement about "credit scores" is MOST accurate?

A. Different models give a person many scores

B. Everyone has one official score set by the government

C. Scores are updated only once a year

D. Scores are the same at every bureau

GO DEEPER 2 — Myths about credit scores

Question 1 of 5 · Learn and Apply

LEARN

Checking your own report or score is a soft inquiry and never affects scores.

Myth or fact: "Checking my own credit report lowers my score."

A. Fact: every check lowers your score

B. Fact: only on weekends

C. Myth: your own check is a soft inquiry

D. Fact: each check lowers your score by about 50 points

GO DEEPER 2 — Myths about credit scores

Question 2 of 5 · Learn and Apply

LEARN

Card use is reported each month. Paying the full statement balance shows responsible use without paying interest.

Myth or fact: "Carrying a small balance and paying interest helps your score."

A. Fact: interest payments raise scores

B. Myth: paying in full still shows on-time use

C. Fact: only balances over $1,000 count toward building credit

D. Fact: scores need debt to exist

GO DEEPER 2 — Myths about credit scores

Question 3 of 5 · Learn and Apply

LEARN

Credit scores use only information in credit reports.

Myth or fact: "My income determines my credit score."

A. Fact: higher income always means a higher score

B. Fact: scores are a percent of income

C. Myth: income is not in credit reports

D. Fact: only salaried workers have scores

GO DEEPER 2 — Myths about credit scores

Question 4 of 5 · Learn and Apply

LEARN

Closing a card removes its credit limit from your total available credit and may eventually shorten your credit history.

Myth or fact: "Closing an old, unused card always raises my score."

A. Fact: fewer cards always means higher scores

B. Fact: closed cards are deleted immediately

C. Fact: closing a card erases its late payments from your report

D. Myth: it can raise utilization and shorten history

GO DEEPER 2 — Myths about credit scores

Question 5 of 5 · Learn and Apply

LEARN

Scoring models usually treat multiple inquiries for the same kind of loan (car, mortgage, student) within a short window as one, so you can shop for the best rate.

Myth or fact: "Shopping for a car loan at several lenders within a short period ruins my score."

A. Fact: each inquiry costs about 50 points every time

B. Myth: they usually count as one inquiry

C. Fact: you must never compare lenders

D. Fact: only the first lender counts

SET 42 · Credit Cards and Credit Scores

Building credit responsibly

MAIN skill: Build a credit history with low utilization, on-time payments, and starter credit products

Outcome FL.CREDIT.42 · National topic: Managing Credit · NJSLS 9.1.12: CP, CDM
Learning target: Build and maintain a positive credit history

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Part-to-whole percents (5 questions)
  Why: Utilization is a part-to-whole percent.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Utilization targets are percents of a limit.
- B3 · Math link → G6-S11-M (Grade 6 6.RP.A.3.c): Find the whole, given a part and the percent

MAIN — Build a credit history with low utilization, on-time payments, and starter credit products

Question 1 of 5 · Learn and Apply

LEARN

Credit utilization = card balances ÷ credit limits × 100. It is a major part of the "amounts owed" score factor. Lower utilization generally helps scores; a common guideline is to stay below about 30%, and lower is better.

Tia's card has a $1,500 limit, and her statement balance is $450. What is her credit utilization?

A. 3%

B. 30%

C. 70%

D. 333%

MAIN — Build a credit history with low utilization, on-time payments, and starter credit products

Question 2 of 5 · Learn and Apply

LEARN

Overall utilization adds all balances and divides by all limits.

Max has two cards: $300 balance on a $1,000 limit and $700 on a $2,500 limit. What is his overall utilization (nearest tenth)?

A. 28.6%

B. 30.0%

C. 35.0%

D. 40.0%

MAIN — Build a credit history with low utilization, on-time payments, and starter credit products

Question 3 of 5 · Learn and Apply

LEARN

Starter options include a secured credit card (you put down a deposit that usually becomes your limit), a credit-builder loan (payments are saved for you and released at the end), and being added as an authorized user on a parent's card. Paying on time builds history.

Leo has no credit history. Which product is designed to help someone start building credit?

A. A secured credit card backed by a cash deposit

B. A payday loan

C. A prepaid debit card

D. A savings account that comes with no card attached

MAIN — Build a credit history with low utilization, on-time payments, and starter credit products

Question 4 of 5 · Learn and Apply

LEARN

An authorized user can use someone else's card. Many issuers report the account to the authorized user's credit file too, which can help, or hurt if the account is misused.

Leo is added as an authorized user on his mother's card. Her account has a long on-time history and low utilization. What can this do?

A. Make Leo responsible for her past debts

B. Give Leo his own separate credit limit and account

C. Help Leo's credit file show positive history

D. Erase his mother's late payments

MAIN — Build a credit history with low utilization, on-time payments, and starter credit products

Question 5 of 5 · Knowledge Check · Practical how-to

Which plan builds credit with the LEAST cost?

A. Carry a balance each month to show activity

B. Max out the card, then pay the minimum

C. Never use the card at all

D. Charge a small bill and pay it in full

BACKWARD B1 · concept review — Part-to-whole percents

Question 1 of 5 · Learn and Apply

LEARN

Percent = part ÷ whole × 100.

$200 is what percent of $1,000?

A. 2%

B. 20%

C. 80%

D. 500%

BACKWARD B1 · concept review — Part-to-whole percents

Question 2 of 5 · Learn and Apply

LEARN

Part = percent × whole.

A card has a $2,000 limit. What balance equals 10% utilization?

A. $20

B. $200

C. $1,800

D. $2,000

BACKWARD B1 · concept review — Part-to-whole percents

Question 3 of 5 · Knowledge Check

Which utilization is LOWEST?

A. $100 of a $2,000 limit

B. $100 of a $500 limit

C. $400 of a $1,000 limit

D. $900 of a $3,000 limit

BACKWARD B1 · concept review — Part-to-whole percents

Question 4 of 5 · Learn and Apply

LEARN

Utilization is balance ÷ limit. A larger limit with the same balance makes the fraction smaller.

If balances stay the same and a credit limit increases, what happens to utilization?

A. It goes up

B. It goes down

C. It stays the same

D. It becomes 100%

BACKWARD B1 · concept review — Part-to-whole percents

Question 5 of 5 · Knowledge Check

A card with a $500 limit has a $500 balance. What is utilization?

A. 0%

B. 50%

C. 100%

D. 500%

GO DEEPER 1 — Credit-builder loans and secured cards in detail

Question 1 of 5 · Learn and Apply

LEARN

With a credit-builder loan, the lender holds the loan amount in an account while you make payments. Payments are reported to bureaus, and you receive the money at the end. The cost is the interest and fees.

A credit-builder loan of $600 is held in a savings account while Ana makes 12 payments of $52. What does she receive at the end, and what did it cost?

A. $624; cost $0

B. $52; cost $548

C. $600; cost $52

D. $600; cost $24

GO DEEPER 1 — Credit-builder loans and secured cards in detail

Question 2 of 5 · Learn and Apply

LEARN

A secured card works like a regular credit card for utilization: balance ÷ limit.

Leo opens a secured card with a $300 deposit and a $300 limit. He charges $30 a month and pays in full. What is his utilization each month?

A. 1%

B. 10%

C. 30%

D. 100%

GO DEEPER 1 — Credit-builder loans and secured cards in detail

Question 3 of 5 · Learn and Apply

LEARN

Many secured cards review accounts after a period of good use and may convert them to regular (unsecured) cards.

After a year of on-time payments, some issuers "graduate" a secured card. What usually happens?

A. The deposit is kept as a fee

B. It becomes a regular card; the deposit is returned

C. The card is closed and a penalty is charged to Leo

D. Leo must pay a new deposit

GO DEEPER 1 — Credit-builder loans and secured cards in detail

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

A secured card helps build credit only if the issuer reports your payments to the credit bureaus.

Which question should Leo ask before opening a secured card?

A. Does the issuer report to all three credit bureaus?

B. Does the card offer cash-back rewards on purchases?

C. Will the deposit earn interest like savings?

D. Will it let me skip payments?

GO DEEPER 1 — Credit-builder loans and secured cards in detail

Question 5 of 5 · Learn and Apply

LEARN

When you pay the full balance every month, the APR does not affect your cost, but annual fees do.

A secured card has a $49 annual fee and 25.99% APR; another has $0 fee and 28.99% APR. Leo will pay in full every month. Which is cheaper?

A. The $49-fee card, because its APR is lower

B. They cost the same

C. The $0-fee card

D. Neither; both charge $49

GO DEEPER 2 — A first-year credit-building plan

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

The key habits for building credit are on-time payment, low balances, and few new applications.

Which step comes FIRST in a safe credit-building plan for a student?

A. Apply for five cards at once

B. Spend up to the limit each month to show activity

C. Set up autopay for the full statement balance

D. Lend the card to friends

GO DEEPER 2 — A first-year credit-building plan

Question 2 of 5 · Learn and Apply

LEARN

Card issuers usually report the balance shown on your statement. Paying before the statement closes lowers the reported balance and utilization.

Tia's statement balance would be $480 on a $600 limit (80%). She pays $400 BEFORE the statement closes. What utilization is reported?

A. 80%

B. 67%

C. 0%

D. About 13%

GO DEEPER 2 — A first-year credit-building plan

Question 3 of 5 · Learn and Apply

LEARN

Late payments of 30 days or more are usually reported to the bureaus and can stay on a credit report for years.

Which habit could LOWER Tia's score during her first year?

A. Missing a payment by 30+ days

B. Paying in full each month

C. Keeping utilization under 10%

D. Checking her own credit report

GO DEEPER 2 — A first-year credit-building plan

Question 4 of 5 · Learn and Apply

LEARN

Utilization = balance ÷ limit.

After a year, Tia's issuer offers a higher limit with no fee. If her spending stays the same, what effect does accepting it usually have?

A. Higher utilization

B. Lower utilization

C. A hard inquiry that lowers her score for years

D. A shorter average age of accounts

GO DEEPER 2 — A first-year credit-building plan

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

You can get free credit reports at AnnualCreditReport.com, and many banks and card issuers show a free score.

Which is the BEST way to check progress on building credit?

A. Check free reports and scores regularly

B. Pay for a "score boost" service

C. Apply for new cards to see if she is approved

D. Apply for loans now and then to see if approved

SET 43 · Investing, Brokerage Accounts, and Investment Products

Saving versus investing: risk and return

MAIN skill: Distinguish saving from investing and explain the relationship between risk and return

Outcome FL.INVEST.43 · National topic: Investing · NJSLS 9.1.12: FI, RM

Learning target: Explain the relationship between risk and return and compare saving with investing

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Saving versus investing (5 questions)
  Why: Students must tell a safe, insured deposit apart from an investment that can rise or fall before learning about brokerage accounts.
- B2 · Math link → G7-S08-M (Grade 7 7.RP.A.3): Find a percent increase or a percent decrease
  Why: Investment returns are percent changes.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Volatility and the order of returns (5 questions)
- Go Deeper 2: Matching investments to time horizons (5 questions)

Practical skills beyond the standards: Matching investments to time horizons

Content status: stable

Source: SEC Investor.gov — Investments are not federally insured, can lose value, and generally carry more risk and more potential return than insured savings.
https://www.investor.gov/introduction-investing/investing-basics/save-and-invest/saving-investing

MAIN — Distinguish saving from investing and explain the relationship between risk and return

Question 1 of 5 · Learn and Apply

LEARN

Saving means setting money aside in safe, easy-to-reach places, such as insured bank accounts, for short-term goals and emergencies. Investing means buying assets, such as stocks, bonds, or funds, that may grow over time but can also lose value. Investments are not FDIC insured.

Which statement best describes the difference between saving and investing?

A. Saving and investing are two words for the same thing

B. Investing is guaranteed to earn more than saving every year

C. Saving always loses money, while investing never does

D. Saving keeps money safe and available; investing seeks growth but can lose value

MAIN — Distinguish saving from investing and explain the relationship between risk and return

Question 2 of 5 · Learn and Apply

LEARN

Time horizon is how long until you need the money. Money needed soon should not be exposed to market drops. Long horizons give investments time to recover from downturns.

Which goal is generally BETTER suited to investing than to a savings account?

A. An emergency fund that must be available next week

B. Retirement in 40 years

C. Rent due at the start of next month

D. A car repair expected in two months

MAIN — Distinguish saving from investing and explain the relationship between risk and return

Question 3 of 5 · Learn and Apply

LEARN

Risk is the chance that an investment's results will differ from what you expect, including losing money. In general, investments with higher expected returns have bigger ups and downs. Past averages do not guarantee future results.

Investment A has averaged 3% a year with small ups and downs. Investment B has averaged 9% a year but sometimes lost 30% in a year. What does this illustrate?

A. Investment B is guaranteed to earn 9% every year

B. Investment A can never lose any money at all

C. Higher potential return usually comes with higher risk

D. Risk and return are completely unrelated to each other

MAIN — Distinguish saving from investing and explain the relationship between risk and return

Question 4 of 5 · Learn and Apply

LEARN

Percent return = (ending value − starting value) ÷ starting value × 100.

A stock fund rose from $50 to $58 a share in a year. What was the percent return (no dividends)?

A. 8%

B. 13.8%

C. 16%

D. 116%

MAIN — Distinguish saving from investing and explain the relationship between risk and return

Question 5 of 5 · Knowledge Check

Which is TRUE about money invested in a stock fund through a brokerage account?

A. It is FDIC insured up to $250,000, like a bank savings account

B. It can lose value and is not FDIC insured

C. It always keeps at least its starting value

D. It is guaranteed by the federal government

BACKWARD B1 · concept review — Saving versus investing

Question 1 of 5 · Learn and Apply

LEARN

Saving keeps money safe and available, usually in insured bank or credit union accounts. Investing buys assets that can rise or fall in value.

Which is an example of SAVING?

A. Putting $50 a month into an insured savings account

B. Buying shares of one technology company every month

C. Buying a stock index fund

D. Buying a corporate bond fund

BACKWARD B1 · concept review — Saving versus investing

Question 2 of 5 · Learn and Apply

LEARN

Investing means using money to buy assets, such as stocks, bonds, or funds, hoping they grow in value or pay income.

Which is an example of INVESTING?

A. Opening a checking account

B. Keeping cash in a wallet

C. Buying shares of a company

D. Depositing money in a savings account

BACKWARD B1 · concept review — Saving versus investing

Question 3 of 5 · Learn and Apply

LEARN

Stock prices change with market conditions and can fall below what you paid. Insured deposits keep their dollar value up to the insurance limit.

Which can LOSE value because of market changes?

A. An FDIC-insured savings account

B. An insured certificate of deposit held to maturity

C. Cash in an insured checking account

D. A stock

BACKWARD B1 · concept review — Saving versus investing
Question 4 of 5 · Knowledge Check

Why do people invest if investments can lose value?

A. Because investments are guaranteed to rise every year
B. Because investing is the same thing as saving in a bank
C. For the chance of higher long-term growth than savings
D. Because investments are always insured

BACKWARD B1 · concept review — Saving versus investing

Question 5 of 5 · Learn and Apply

LEARN

Money needed very soon should be kept where its value will not drop.

Kim needs $800 for books in one month. Where should that money be?

A. In savings or checking, not invested

B. In a single stock she likes and follows

C. In a 10-year bond

D. In cryptocurrency

GO DEEPER 1 — Volatility and the order of returns

Question 1 of 5 · Learn and Apply

LEARN

Percent changes multiply. A loss needs a larger percent gain to recover: after a 20% drop, a 20% gain does not get you back to the start.

An investment falls 20% one year, then rises 20% the next. Starting from $1,000, what is it worth after two years?

A. $800

B. $960

C. $1,000

D. $1,040

GO DEEPER 1 — Volatility and the order of returns

Question 2 of 5 · Learn and Apply

LEARN

Recovery gain needed = loss ÷ remaining value.

After an investment falls 50%, what percent gain is needed to return to the original value?

A. 25%

B. 50%

C. 100%

D. 150%

GO DEEPER 1 — Volatility and the order of returns

Question 3 of 5 · Learn and Apply

LEARN

Volatility describes how much returns swing up and down. Two investments with the same average can have very different risk.

Two investments both average 6% a year. Which is generally riskier?

A. The one with returns between 4% and 8%

B. The one whose yearly returns swing between −25% and +35%

C. They are equally risky because their average returns match

D. The one that is newer to the market

GO DEEPER 1 — Volatility and the order of returns

Question 4 of 5 · Learn and Apply

LEARN

A longer time horizon allows investors to wait out market declines rather than selling at a loss.

Why might a young investor accept more volatility for long-term goals?

A. Young investors cannot lose money

B. Volatility disappears after age 30

C. Markets rise every single year for young people

D. There is more time to recover from downturns

GO DEEPER 1 — Volatility and the order of returns

Question 5 of 5 · Learn and Apply

LEARN

Selling during a downturn turns a temporary drop in value into a realized loss.

An investor sells everything after a 25% drop and misses the recovery. Which behavior caused the loss to become permanent?

A. Holding a diversified fund through ups and downs

B. Investing regularly each month

C. Panic selling during a downturn

D. Reading the fund's prospectus

GO DEEPER 2 — Matching investments to time horizons

Question 1 of 5 · Learn and Apply

LEARN

Short horizons call for safety; long horizons can take on more risk for growth.

Which mix is most sensible for money needed in 2 years for a down payment?

A. Mostly individual stocks she picks herself

B. All cryptocurrency

C. A 30-year bond

D. Mostly insured savings or short-term CDs

GO DEEPER 2 — Matching investments to time horizons

Question 2 of 5 · Knowledge Check

Which goal has the LONGEST time horizon?

A. Retirement savings for a 20-year-old

B. A spring break trip next year

C. A laptop she needs next semester for class

D. A car in 3 years

GO DEEPER 2 — Matching investments to time horizons

Question 3 of 5 · Learn and Apply

LEARN

Each goal can have its own strategy based on when the money is needed.

A 16-year-old saving for college in 2 years and for retirement in 50 years should use...

A. the same high-risk investment for both

B. different strategies for each goal

C. cash under the mattress for both

D. no plan for either

GO DEEPER 2 — Matching investments to time horizons

Question 4 of 5 · Learn and Apply

LEARN

Risk tolerance is your ability and willingness to handle investment losses without abandoning your plan.

What is "risk tolerance"?

A. The highest return an investor can expect to earn

B. The minimum deposit needed to open an account

C. How much ups and downs an investor can handle

D. A guarantee against loss

GO DEEPER 2 — Matching investments to time horizons

Question 5 of 5 · Learn and Apply

LEARN

The real return is roughly the nominal return minus inflation.

An investment pays 2% while prices rise 3% a year. What happens to purchasing power?

A. It rises by 2% a year

B. It falls by about 1% a year

C. It rises by 5% a year

D. It stays the same as last year

SET 44 · Investing, Brokerage Accounts, and Investment Products

Brokerage firms and brokerage accounts

MAIN skill: Explain what a brokerage firm and brokerage account are, and how they differ from banks

Outcome FL.INVEST.44 · National topic: Investing · NJSLS 9.1.12: FI

Learning target: Explain the role of brokerage firms and how investor protections differ from deposit insurance

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Banking versus investing accounts (5 questions)
  - Why: Students who mix up banking and investing accounts cannot follow brokerage questions; this is a financial-concept prerequisite, not a math one.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: What a brokerage account can hold (5 questions)
- Go Deeper 2: SIPC and FDIC protections in detail (5 questions)

Practical skills beyond the standards: Checking a broker on FINRA BrokerCheck

Content status: time-sensitive

Source: SIPC — SIPC protects customers of failed member brokerage firms up to $500,000, including a $250,000 limit for cash; it does not protect against declines in investment value. https://www.sipc.org/for-investors/what-sipc-protects

Source: SEC Investor.gov — Investments are not federally insured, can lose value, and generally carry more risk and more potential return than insured savings.
https://www.investor.gov/introduction-investing/investing-basics/save-and-invest/saving-investing

MAIN — Explain what a brokerage firm and brokerage account are, and how they differ from banks

Question 1 of 5 · Learn and Apply

LEARN

A brokerage account allows someone to buy and hold investments such as stocks, bonds, and exchange-traded funds. Brokerage firms include Charles Schwab, Fidelity, and E*TRADE. Unlike an ordinary checking account, a brokerage account is commonly used for investing.

Someone wants to purchase shares of a publicly traded company. Which type of account would generally allow them to do that?

A. Brokerage account

B. Standard checking account

C. Traditional savings account

D. Certificate of deposit

MAIN — Explain what a brokerage firm and brokerage account are, and how they differ from banks

Question 2 of 5 · Learn and Apply

LEARN

A brokerage firm (broker-dealer) is a company registered to buy and sell securities, such as stocks, bonds, and funds, for its customers. It keeps customers' investments in brokerage accounts and sends statements. Some companies offer both banking and brokerage services, but the accounts are different products.

What does a brokerage firm do?

A. It insures bank deposits up to $250,000 for each depositor

B. It sets the interest rates that every bank must pay to its savers each year

C. It collects federal income taxes from investors

D. It buys and sells investments for customers and holds them in accounts

MAIN — Explain what a brokerage firm and brokerage account are, and how they differ from banks

Question 3 of 5 · Learn and Apply

LEARN

Examples of brokerage firms include Charles Schwab, Fidelity, E*TRADE, and Vanguard. Naming them is not an endorsement; firms differ in fees, services, and investment choices.

Which pair lists two brokerage firms?

A. The FDIC and the NCUA

B. Fidelity and Charles Schwab

C. Equifax and TransUnion, the bureaus

D. Visa and Mastercard

MAIN — Explain what a brokerage firm and brokerage account are, and how they differ from banks

Question 4 of 5 · Learn and Apply

LEARN

A bank deposit is a promise by the bank to repay your dollars, protected by deposit insurance. An investment is ownership of an asset whose market value can change.

Ella keeps $3,000 in a bank savings account and $3,000 in a stock fund in her brokerage account. A market drop cuts stock prices 20%. Which statement is TRUE?

A. The fund falls to about $2,400; the savings stay at $3,000

B. Both fall to $2,400, because both are her money

C. Both stay at $3,000 because both of her accounts are insured

D. The savings fall to $2,400 but the fund stays at $3,000

MAIN — Explain what a brokerage firm and brokerage account are, and how they differ from banks

Question 5 of 5 · Learn and Apply

LEARN

SIPC (Securities Investor Protection Corporation) protects customers of failed member brokerage firms up to $500,000, including $250,000 for cash, when securities or cash are missing. SIPC does not protect against market losses. The FDIC protects bank deposits, not investments.

Ella's brokerage firm fails, and some customer securities are missing. Which protection may help her?

A. FDIC insurance on her investment losses

B. SIPC payment for any drop in her stock prices

C. SIPC, which restores missing assets up to its limits

D. No protection of any kind exists for brokerage customers

BACKWARD B1 · concept review — Banking versus investing accounts

Question 1 of 5 · Learn and Apply

LEARN

Many workers have their paychecks deposited into bank accounts. Checking accounts are commonly used for paying bills, while savings accounts are used for setting aside money. A brokerage account is generally used to buy and hold investments, such as stocks and funds. Some companies offer both banking and brokerage services.

Which account would generally be used to purchase shares of a publicly traded company?

A. Standard checking account

B. Traditional savings account

C. Certificate of deposit

D. Brokerage account

BACKWARD B1 · concept review — Banking versus investing accounts
Question 2 of 5 · Learn and Apply

LEARN
Checking accounts are designed for frequent payments and debit card use.

Which account is MOST often used to pay rent and everyday bills?

A. A brokerage account
B. A certificate of deposit
C. A checking account
D. A retirement account

BACKWARD B1 · concept review — Banking versus investing accounts

Question 3 of 5 · Learn and Apply

LEARN

Savings accounts are insured deposits that keep money safe and available.

Which account is MOST often used to set aside money safely for an emergency?

A. A savings account

B. A brokerage account full of stocks

C. A cryptocurrency wallet

D. A collectibles collection

BACKWARD B1 · concept review — Banking versus investing accounts

Question 4 of 5 · Learn and Apply

LEARN

Who sells a product does not change what it is. Investments sold through a bank are still investments.

A bank also offers brokerage services. Ben buys a stock fund through the bank's investment arm. Is the fund a bank deposit?

A. Yes, because the bank's name is on it

B. No; it is an investment, not a deposit

C. Yes, if Ben has a checking account there

D. Yes, but only for the first year

BACKWARD B1 · concept review — Banking versus investing accounts
Question 5 of 5 · Knowledge Check

Which statement is TRUE about stocks held in a brokerage account?

A. Their value is fixed once they are bought
B. They earn a fixed interest rate like savings
C. They are FDIC insured
D. Their value can rise or fall

GO DEEPER 1 — What a brokerage account can hold

Question 1 of 5 · Learn and Apply

LEARN

Brokerage accounts can hold many kinds of securities: individual stocks, bonds, mutual funds, exchange-traded funds (ETFs), and cash (often in a money market fund or bank "sweep" program).

Which investments can a typical brokerage account hold?

A. Only savings deposits and checking accounts

B. Stocks, bonds, mutual funds, and ETFs

C. Only real estate deeds

D. Only gift cards and store credit

GO DEEPER 1 — What a brokerage account can hold

Question 2 of 5 · Learn and Apply

LEARN

When you deposit money into a brokerage account, it sits as cash until you choose investments. Brokers often place this cash in a bank sweep program or a money market fund.

Cash waiting in a brokerage account is often kept in a "sweep" program or money market fund. What is it doing there?

A. Automatically buying stocks every day

B. Earning the stock market's return

C. Waiting to be invested or withdrawn

D. Paying the broker's taxes

GO DEEPER 1 — What a brokerage account can hold

Question 3 of 5 · Learn and Apply

LEARN

A brokerage firm holds securities in custody for customers, but the customer owns them. Customer assets must be kept separate from the firm's own assets.

Who OWNS the stocks held in Mia's brokerage account?

A. Mia, the account owner

B. The brokerage firm that holds it

C. The stock exchange

D. The SEC

GO DEEPER 1 — What a brokerage account can hold

Question 4 of 5 · Learn and Apply

LEARN

The Securities and Exchange Commission (SEC) regulates securities markets. FINRA, a self-regulatory organization overseen by the SEC, supervises brokerage firms and registered brokers.

Which agency regulates brokerage firms in the United States?

A. The FDIC

B. The IRS

C. The CFPB only

D. The SEC, with FINRA overseeing brokers

GO DEEPER 1 — What a brokerage account can hold

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

FINRA BrokerCheck is a free online tool that shows whether a person or firm is registered and any disciplinary actions.

Before using a broker or financial professional, which free tool shows their registration and disciplinary history?

A. The FDIC's BankFind tool

B. A social media review

C. A credit report from one bureau

D. FINRA BrokerCheck

GO DEEPER 2 — SIPC and FDIC protections in detail

Question 1 of 5 · Learn and Apply

LEARN

SIPC steps in when a member brokerage firm fails and customer cash or securities are missing. It does not protect against investment losses from market movements or bad advice.

Which loss is protected by SIPC?

A. A stock that falls 30% in value

B. Customer securities missing after a member broker fails

C. Losses from a bad investment choice

D. Losses to an investment scam run outside the brokerage firm

GO DEEPER 2 — SIPC and FDIC protections in detail

Question 2 of 5 · Learn and Apply

LEARN

SIPC restores missing securities and cash up to its limits; the cash limit is lower than the total limit.

SIPC protection is up to $500,000 per customer, including up to $250,000 for cash. Sam has $400,000 of stocks missing at a failed broker. Up to how much may SIPC restore?

A. $0

B. $250,000

C. $400,000

D. $500,000

GO DEEPER 2 — SIPC and FDIC protections in detail

Question 3 of 5 · Learn and Apply

LEARN

SIPC limits: up to $500,000 per customer in total, of which no more than $250,000 can be for cash.

Kai has $300,000 of cash missing at a failed SIPC member broker. Up to how much of the cash may SIPC restore?

A. $0

B. $250,000

C. $300,000

D. $500,000

GO DEEPER 2 — SIPC and FDIC protections in detail

Question 4 of 5 · Learn and Apply

LEARN

The FDIC insures bank deposits; SIPC protects brokerage customers when member firms fail.

Which protection applies to a savings account at a bank?

A. FDIC deposit insurance

B. SIPC protection

C. FINRA insurance coverage

D. SEC insurance

GO DEEPER 2 — SIPC and FDIC protections in detail

Question 5 of 5 · Learn and Apply

LEARN

Claims that an investment "can never lose money" are false. Every investment carries risk.

A website claims, "Our investments are SIPC insured, so you can never lose money." What is wrong?

A. Nothing; SIPC guarantees all investment returns

B. SIPC covers only bank deposits

C. SIPC does not protect against market losses

D. SIPC protects only crypto

SET 45 · Investing, Brokerage Accounts, and Investment Products

Opening and funding a brokerage account

MAIN skill: Complete the steps to open and fund a brokerage account and distinguish funding from investing

Outcome FL.INVEST.45 · National topic: Investing · NJSLS 9.1.12: FI, PB

Learning target: Describe how to open and fund an investment account and the difference between funding and investing

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

B1 · Concept review: Moving money between accounts (5 questions)

Why: Students must understand transfers between accounts before separating funding from investing.

After 5 of 5 correct, Go Deeper unlocks (a chain):

MAIN — Complete the steps to open and fund a brokerage account and distinguish funding from investing

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

Brokerage firms must verify your identity and learn about your situation. Applications usually ask for name, address, date of birth, Social Security number (or other taxpayer ID), employment information, and investment experience and goals.

Which information is generally required to open a brokerage account?

A. A credit card number and its security code

B. A copy of your last tax refund check

C. Social Security number, date of birth, address, and employment details

D. Your high school transcript and test scores

MAIN — Complete the steps to open and fund a brokerage account and distinguish funding from investing

Question 2 of 5 · Learn and Apply

LEARN

Minors generally cannot open individual brokerage accounts. A custodial account (often under the UTMA or UGMA laws) is opened by an adult custodian for a minor; the assets belong to the minor and are transferred to them at the age set by state law.

Leo, 16, wants to invest. Most brokerage firms require individual account owners to be adults. Which option fits his age?

A. A custodial account managed by an adult for Leo

B. An individual account opened in Leo's name alone

C. Using a parent's individual account without telling them

D. Waiting until age 30, the minimum to invest

MAIN — Complete the steps to open and fund a brokerage account and distinguish funding from investing

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Funding means moving money into the account, often by an electronic transfer from a bank. After funding, the money sits as cash until you place an order to buy an investment.

Ana links her checking account and transfers $500 to her new brokerage account. What has she done?

A. Bought $500 of stock automatically

B. Bought a $500 savings bond

C. Paid a $500 fee to open the account

D. Funded the account; she has not bought any investment yet

MAIN — Complete the steps to open and fund a brokerage account and distinguish funding from investing

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Investing requires choosing a specific investment (such as a fund) and placing an order. Many accounts leave deposited money in cash until you do.

Ana's brokerage account shows $500 in "cash" and $0 in investments. What should she do to invest?

A. Nothing; the cash is invested automatically

B. Choose an investment and place a buy order

C. Transfer the money back to checking

D. Call the FDIC to activate investing

MAIN — Complete the steps to open and fund a brokerage account and distinguish funding from investing

Question 5 of 5 · Knowledge Check

Ana places an order and buys $480 of a fund, leaving $20 in cash. What does her account hold?

A. $480 in the fund and $20 in cash

B. $500 in the fund

C. $500 in cash

D. $480 in cash and $20 in the fund

BACKWARD B1 · concept review — Moving money between accounts

Question 1 of 5 · Learn and Apply

LEARN

Transfers move money between your accounts. The money stays yours; only its location changes.

What is an electronic transfer between your bank and your brokerage account?

A. Borrowing money from the broker

B. Moving your own money from one account to another

C. Buying shares of a fund

D. Buying a stock automatically

BACKWARD B1 · concept review — Moving money between accounts

Question 2 of 5 · Knowledge Check

After $200 moves from checking to brokerage, what happens to the checking balance?

A. It goes up by $200

B. It stays the same until she sells

C. It doubles

D. It goes down by $200

BACKWARD B1 · concept review — Moving money between accounts

Question 3 of 5 · Learn and Apply

LEARN

"Funding" an account means putting money into it. Buying an investment with that money is a separate step.

Ben moves $200 from checking into his brokerage account but buys nothing yet. Which step has he completed?

A. Buying an investment

B. Opening a margin loan

C. Funding the account

D. Selling shares

BACKWARD B1 · concept review — Moving money between accounts

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Electronic transfers use routing and account numbers, never PINs or passwords.

What information links a bank account for transfers?

A. Your debit card PIN

B. Your online banking password

C. Your credit card number and expiration date

D. The bank's routing number and your account number

BACKWARD B1 · concept review — Moving money between accounts

Question 5 of 5 · Knowledge Check

Ben transfers $100 to his brokerage account but forgets to buy anything. What is the $100 doing?

A. Sitting as cash in the account

B. Growing automatically with the stock market

C. Earning a guaranteed 10%

D. Returned to his bank automatically

GO DEEPER 1 — Comparing brokerage firms

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

Brokerage firms differ in commissions and account fees, available investments (for example, low-cost index funds), account minimums, fractional shares, research tools, and customer service.

Which features are most useful to compare when choosing a brokerage firm?

A. How often the firm advertises on TV

B. Fees, investment choices, minimums, and tools

C. Which firm a friend happened to use

D. The number of offices the firm has in other countries

GO DEEPER 1 — Comparing brokerage firms

Question 2 of 5 · Learn and Apply

LEARN

Small yearly fees add up: total = fee × years.

Broker A charges a $25 yearly account fee; Broker B charges none. Over 10 years, how much more does Broker A cost in account fees?

A. $0

B. $2.50

C. $25

D. $250

GO DEEPER 1 — Comparing brokerage firms

Question 3 of 5 · Learn and Apply

LEARN

With fractional shares, shares bought = dollars invested ÷ price per share.

Fractional shares let investors buy part of a share. A share costs $400, and Sam invests $50. What fraction of a share does he buy?

A. 8

B. 1/4

C. 1/8

D. 1/400

GO DEEPER 1 — Comparing brokerage firms

Question 4 of 5 · Learn and Apply

LEARN

The standard settlement cycle for most U.S. stock trades became T+1 (trade date plus one business day) in May 2024.

Settlement is when ownership and money officially change hands. For most stock trades the standard is "T+1." What does that mean?

A. The trade takes one year

B. The trade settles one business day after the trade date

C. The trade can be reversed for one day

D. The trade costs $1

GO DEEPER 1 — Comparing brokerage firms

Question 5 of 5 · Learn and Apply

LEARN

Many firms offer brokerage accounts. Examples in this course are for recognition only.

Which statement about mentioning firms like Fidelity, Charles Schwab, or E*TRADE in this course is accurate?

A. They are the only brokers that are legal to use

B. They are recommended by the course as the best choices

C. They are government agencies

D. They are examples, not recommendations

GO DEEPER 2 — Custodial accounts and getting started as a teen

Question 1 of 5 · Learn and Apply

LEARN

Assets in a UTMA/UGMA custodial account legally belong to the minor. The custodian manages them for the minor's benefit until the age set by state law.

In a custodial account for Leo, who owns the investments?

A. Leo, though an adult manages them until he reaches the age set by law

B. The adult custodian forever

C. The brokerage firm

D. The state government

GO DEEPER 2 — Custodial accounts and getting started as a teen

Question 2 of 5 · Learn and Apply

LEARN

Gifts to UTMA/UGMA accounts are irrevocable: they cannot be taken back.

A custodial account receives a $1,000 gift. Can the custodian later take it back for personal use?

A. Yes, at any time

B. Yes, after one year

C. No; gifts to a custodial account belong to the minor

D. Yes, if the stock falls

GO DEEPER 2 — Custodial accounts and getting started as a teen

Question 3 of 5 · Knowledge Check

Leo puts $25 a month into an index fund in his custodial account. How much does he contribute in 3 years?

A. $75

B. $300

C. $900

D. $9,000

GO DEEPER 2 — Custodial accounts and getting started as a teen

Question 4 of 5 · Learn and Apply

LEARN

With dollar-cost averaging, you invest the same dollar amount each period, so you automatically buy more shares when prices are low and fewer when prices are high.

Investing a fixed amount on a regular schedule is called dollar-cost averaging. What happens when prices are low?

A. The fixed amount buys more shares

B. The fixed amount buys fewer shares

C. The investor must wait for prices to recover

D. The price is guaranteed to rise next month

GO DEEPER 2 — Custodial accounts and getting started as a teen

Question 5 of 5 · Learn and Apply

LEARN

Shares bought = dollars invested ÷ price per share.

Leo invests $25 when a fund is $5 a share and $25 when it is $10 a share. How many shares does he own?

A. 5 shares

B. 2.5 shares

C. 7.5 shares

D. 10 shares

SET 46 · Investing, Brokerage Accounts, and Investment Products

Stocks: ownership, prices, and dividends

MAIN skill: Explain stock ownership and calculate gains, losses, and dividend income

Outcome FL.INVEST.46 · National topic: Investing · NJSLS 9.1.12: FI

Learning target: Explain stocks, dividends, capital gains, and why stock prices change

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Owners and lenders (5 questions)
  Why: Stock questions depend on separating owning a company (stock) from lending to it (bond) or depositing money (bank).
- B2 · Math link → G7-S08-M (Grade 7 7.RP.A.3): Find a percent increase or a percent decrease
  Why: Stock returns are percent changes in price.
- B3 · Math link → G7-S20-M (Grade 7 7.NS.A.2.a): Interpret products of rational numbers in real-world situations
  Why: Gains and losses multiply a per-share change (possibly negative) by the number of shares.

Practical skills beyond the standards: Researching companies with SEC filings

Content status: stable

MAIN — Explain stock ownership and calculate gains, losses, and dividend income

Question 1 of 5 · Learn and Apply

LEARN

A stock (share) is a unit of ownership in a corporation. Shareholders can benefit if the company grows (the share price may rise) and may receive dividends, which are payments from profits. If the company does poorly, the share price can fall, even to zero.

What does owning a share of stock mean?

A. Lending money to a company for a fixed interest rate

B. Depositing money in a company's bank account

C. Having a guaranteed right to a fixed yearly payment

D. Owning a small part of a company

MAIN — Explain stock ownership and calculate gains, losses, and dividend income

Question 2 of 5 · Learn and Apply

LEARN

Gain or loss = (selling price − purchase price) × number of shares.

Jada buys 20 shares at $45 and sells them later at $52. Ignoring fees, what is her gain?

A. $7

B. $140

C. $900

D. $1,040

MAIN — Explain stock ownership and calculate gains, losses, and dividend income

Question 3 of 5 · Learn and Apply

LEARN

A dividend is a payment a company may make to shareholders, usually from profits, often quarterly. Dividends are not guaranteed; companies can raise, cut, or stop them.

A stock pays a yearly dividend of $1.80 per share. Omar owns 50 shares. How much dividend income does he receive in a year?

A. $1.80

B. $51.80

C. $90

D. $900

MAIN — Explain stock ownership and calculate gains, losses, and dividend income

Question 4 of 5 · Learn and Apply

LEARN

Percent change = (new − old) ÷ old × 100. A negative result is a decrease.

A stock price falls from $80 to $60. What is the percent change?

A. −33.3%

B. −25%

C. −20%

D. 25%

MAIN — Explain stock ownership and calculate gains, losses, and dividend income

Question 5 of 5 · Knowledge Check

Why do stock prices change?

A. The government sets stock prices every morning

B. Buyers and sellers change what they are willing to pay

C. Prices rise by the same amount every day

D. Companies choose one price and never change it afterward

BACKWARD B1 · concept review — Owners and lenders

Question 1 of 5 · Learn and Apply

LEARN

Shareholders own part of a company. Bondholders lend to it. Customers buy from it.

Which person is an OWNER of a company?

A. Someone who lent it money through a bond

B. Someone who deposits money in a bank

C. Someone who holds its shares

D. Someone who buys its products

BACKWARD B1 · concept review — Owners and lenders

Question 2 of 5 · Learn and Apply

LEARN

Owners share in a company's success through price gains and dividends, and in its losses through price declines.

If a company earns larger profits, what can happen to its shareholders?

A. They must pay the company's taxes out of pocket

B. The share price may rise and dividends may grow

C. They lose their shares

D. Nothing ever changes for them

BACKWARD B1 · concept review — Owners and lenders

Question 3 of 5 · Knowledge Check

If a company fails, what can happen to its stock?

A. It can lose most or all of its value

B. It is repaid in full by the government

C. It turns into a bond that pays interest

D. Shareholders are paid before lenders

BACKWARD B1 · concept review — Owners and lenders

Question 4 of 5 · Learn and Apply

LEARN

Shareholders can earn money two ways: a capital gain when they sell shares for more than they paid, and a dividend when the company pays out part of its profits.

A company sends each shareholder $0.50 per share from its profits. What is this payment called?

A. Interest

B. A capital gain

C. A premium

D. A dividend

BACKWARD B1 · concept review — Owners and lenders

Question 5 of 5 · Knowledge Check

A share bought for $30 is now worth $36. What is the gain per share?

A. $6

B. 20

C. $36

D. $66

GO DEEPER 1 — How stock prices change

Question 1 of 5 · Learn and Apply

LEARN

Stock prices reflect expectations about a company's future profits. News that beats expectations often pushes prices up; disappointing news often pushes them down.

A company reports much higher profits than investors expected. What is the most likely immediate effect on its stock price?

A. It tends to rise

B. It tends to fall

C. It must stay the same by law

D. It drops to zero

GO DEEPER 1 — How stock prices change

Question 2 of 5 · Learn and Apply

LEARN

Short-term price moves often reflect changing expectations, news, interest rates, and investor emotions, not just company results.

A stock's price rose 10% one day, though the company's business did not change. Which explanation fits best?

A. The company doubled its size overnight that day

B. The SEC raised the price

C. Investor expectations or market mood shifted

D. Stock prices only change with profits

GO DEEPER 1 — How stock prices change

Question 3 of 5 · Learn and Apply

LEARN

Higher interest rates make bonds and savings more attractive and raise borrowing costs for companies, which can lower stock prices.

If interest rates rise, many stocks fall. Why might that happen?

A. Stocks pay fixed interest that falls

B. Higher rates raise company profits right away

C. Interest rates and stocks are unrelated

D. Safer investments now pay more, so stocks look less attractive

GO DEEPER 1 — How stock prices change

Question 4 of 5 · Learn and Apply

LEARN

Total return includes price change plus dividends: (ending price − starting price + dividends) ÷ starting price × 100.

A stock bought at $40 pays $2 in dividends over a year and ends at $44. What is the total return?

A. 5%

B. 6%

C. 10%

D. 15%

GO DEEPER 1 — How stock prices change

Question 5 of 5 · Knowledge Check

Which statement about past stock performance is TRUE?

A. A stock that rose last year will rise this year

B. It does not guarantee future results

C. Past returns set future prices by law

D. Only past performance matters

GO DEEPER 2 — Picking individual stocks versus owning many

Question 1 of 5 · Learn and Apply

LEARN

Owning a single company concentrates risk: problems at that one company affect all of your money.

Lia puts all $1,000 of her savings into one company's stock. The company has a major scandal, and the stock falls 70%. How much is her investment worth?

A. $300

B. $700

C. $930

D. $1,000

GO DEEPER 2 — Picking individual stocks versus owning many

Question 2 of 5 · Learn and Apply

LEARN

In a diversified fund, a single company's loss is multiplied by its small share of the fund.

Owning shares of 500 companies through a fund, with one company falling 70%, would affect the whole fund about how much (if that company were 0.2% of the fund)?

A. About 70%

B. About 14%

C. About 0.70%

D. About 0.14%

GO DEEPER 2 — Picking individual stocks versus owning many

Question 3 of 5 · Learn and Apply

LEARN

Picking stocks that beat the market is hard even for professionals, especially after fees.

Studies show that most professional fund managers who pick stocks fail to beat broad market index funds over long periods after fees. What does this suggest for beginners?

A. Low-cost diversified index funds are a reasonable core choice

B. Beginners should always pick individual stocks instead of funds

C. Stocks should be avoided entirely

D. Fees make no difference to results

GO DEEPER 2 — Picking individual stocks versus owning many

Question 4 of 5 · Learn and Apply

LEARN

Stocks and funds trade on exchanges under short codes called ticker symbols.

What is a "ticker symbol"?

A. The price of a stock

B. A government ID number

C. A short code that identifies a stock or fund on an exchange

D. A type of bond

GO DEEPER 2 — Picking individual stocks versus owning many

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Public companies must file reports with the SEC, available free on the SEC's EDGAR database.

Which source gives the official, detailed description of a company's business and risks?

A. A social media post about the stock

B. Its filings with the SEC, such as the annual 10-K report

C. An ad for a trading app

D. A friend's tip

SET 47 · Investing, Brokerage Accounts, and Investment Products

Bonds: lending to governments and companies

MAIN skill: Explain how bonds work and calculate bond interest

Outcome FL.INVEST.47 · National topic: Investing · NJSLS 9.1.12: FI

Learning target: Compare bonds with stocks and explain bond risks and returns

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Borrowers, lenders, and interest (5 questions)
  - Why: Bonds reverse the roles students know from loans: the investor is the lender.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  - Why: Coupon interest is a percent of face value.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Types of bonds (5 questions)
- Go Deeper 2: Bond prices and interest rates (5 questions)

Practical skills beyond the standards: After-tax yield comparison

Content status: stable

Source: SEC Investor.gov — When interest rates rise, prices of existing bonds generally fall; bonds carry interest rate risk and credit (default) risk.
https://www.investor.gov/introduction-investing/investing-basics/investment-products/bonds-or-fixed-income-products/bonds

MAIN — Explain how bonds work and calculate bond interest

Question 1 of 5 · Learn and Apply

LEARN

A bond is a loan from the investor to an issuer, such as a company, a city, or the U.S. government. The issuer promises to pay interest (the coupon) on a schedule and repay the face value at maturity. Bonds are investments, not deposits, and can lose value.

What does an investor do when buying a bond?

A. Lends money to the issuer in return for interest and repayment

B. Buys ownership in the issuer and a vote at shareholder meetings

C. Opens an insured deposit at a bank branch

D. Pays a fee for the right to buy stock later

MAIN — Explain how bonds work and calculate bond interest

Question 2 of 5 · Learn and Apply

LEARN

Yearly coupon interest = face value × coupon rate. Many bonds pay half of it every six months.

A $1,000 bond has a 4% coupon rate. How much interest does it pay per year?

A. $4

B. $40

C. $400

D. $1,040

MAIN — Explain how bonds work and calculate bond interest

Question 3 of 5 · Learn and Apply

LEARN

Existing bond prices move opposite to interest rates. When rates rise, older bonds paying lower coupons become less attractive, so their prices fall; when rates fall, their prices rise. This is interest rate risk.

Ivy owns a bond paying 3%. New bonds now pay 5%. What usually happens to the market price of Ivy's bond?

A. It rises

B. It falls

C. It stays exactly at face value no matter what

D. It turns into a 5% bond automatically

MAIN — Explain how bonds work and calculate bond interest

Question 4 of 5 · Learn and Apply

LEARN

Credit (default) risk is the chance the issuer cannot pay. Ratings agencies grade bonds; "investment grade" bonds have lower risk, and "high-yield" ("junk") bonds have higher risk and higher interest. U.S. Treasury securities are backed by the U.S. government.

Which bond generally has the LOWEST risk of default?

A. A bond from a new company with heavy debt

B. A "junk" bond with a low credit rating

C. A U.S. Treasury bond

D. A bond from a company that recently missed payments

MAIN — Explain how bonds work and calculate bond interest

Question 5 of 5 · Learn and Apply

LEARN

Current yield = yearly interest ÷ current price × 100. Buying below face value raises the yield.

A $1,000 bond paying $50 a year is bought for $950. What is its current yield (nearest tenth of a percent)?

A. 4.8%

B. 5.0%

C. 5.3%

D. 95.0%

BACKWARD B1 · concept review — Borrowers, lenders, and interest

Question 1 of 5 · Learn and Apply

LEARN

When an organization sells bonds, it is borrowing from the investors who buy them.

When a city sells bonds to build a bridge, who is borrowing?

A. The investors who buy the bonds

B. The bridge builders

C. The people who drive on the bridge

D. The city

BACKWARD B1 · concept review — Borrowers, lenders, and interest

Question 2 of 5 · Knowledge Check

A bond investor is most like which person?

A. A depositor whose money is FDIC insured

B. A company owner who shares profits

C. A lender who receives interest

D. A borrower who pays interest

BACKWARD B1 · concept review — Borrowers, lenders, and interest

Question 3 of 5 · Learn and Apply

LEARN

At maturity, the issuer repays the bond's face value (principal) to the bondholder.

What is a bond's "maturity date"?

A. The date the bond was printed

B. The date the face value is repaid

C. The date the first interest payment is made

D. The date the issuer was founded

BACKWARD B1 · concept review — Borrowers, lenders, and interest

Question 4 of 5 · Learn and Apply

LEARN

A percent of an amount = amount × rate as a decimal.

What is 3% of $2,000?

A. $6

B. $60

C. $600

D. $2,060

BACKWARD B1 · concept review — Borrowers, lenders, and interest

Question 5 of 5 · Knowledge Check

Which pays interest to the investor?

A. A share of common stock

B. A gift card

C. A debit card

D. A bond

GO DEEPER 1 — Types of bonds

Question 1 of 5 · Learn and Apply

LEARN

Municipal bonds are issued by states and cities. Their interest is often exempt from federal income tax, so their after-tax yield can beat a higher taxable yield.

Interest from many municipal bonds is exempt from federal income tax. Why might a high-income investor prefer one paying 3% over a taxable bond paying 4%?

A. After tax, the municipal bond may keep more income

B. Municipal bonds can never lose value

C. Taxable bonds always default

D. The 3% bond pays more before tax, so it always wins

GO DEEPER 1 — Types of bonds

Question 2 of 5 · Learn and Apply

LEARN

After-tax yield = taxable yield × (1 − tax rate).

An investor in the 32% federal tax bracket gets 4% from a taxable bond. What is the after-tax yield?

A. 1.28%

B. 2.72%

C. 3.68%

D. 4.00%

GO DEEPER 1 — Types of bonds

Question 3 of 5 · Learn and Apply

LEARN

Treasury bills mature in a year or less, notes in 2 to 10 years, and bonds in 20 or 30 years.

Which statement about U.S. Treasury bills, notes, and bonds is TRUE?

A. They are issued by private companies, not the government

B. They are FDIC insured deposits

C. They differ mainly by how long until they mature

D. They pay no interest of any kind

GO DEEPER 1 — Types of bonds

Question 4 of 5 · Learn and Apply

LEARN

Riskier borrowers must pay higher interest to attract lenders.

A high-yield ("junk") bond pays 8%, while an investment-grade bond pays 5%. Why the difference?

A. The high-yield issuer is more likely to default

B. High-yield bonds are insured by the federal government

C. Investment-grade bonds have longer maturities, always

D. The difference is random

GO DEEPER 1 — Types of bonds

Question 5 of 5 · Learn and Apply

LEARN

Bond funds pool money to buy many bonds. Their prices still change with interest rates.

A bond fund holds hundreds of bonds. What is one advantage over buying one bond?

A. It can never lose value

B. It always pays the same fixed income each year

C. It is FDIC insured

D. Default risk is spread across many issuers

GO DEEPER 2 — Bond prices and interest rates

Question 1 of 5 · Learn and Apply

LEARN

At maturity, a bond repays its face value, no matter what it was bought for.

A 2% bond is selling for $900 per $1,000 of face value. If held to maturity, what does the investor receive at maturity?

A. $900

B. $920

C. $1,000

D. $1,020

GO DEEPER 2 — Bond prices and interest rates

Question 2 of 5 · Learn and Apply

LEARN

Gain on price = amount received at maturity − price paid.

Bought at $900 and repaid at $1,000 at maturity, what is the gain on price alone?

A. $20

B. $100

C. $900

D. $1,000

GO DEEPER 2 — Bond prices and interest rates

Question 3 of 5 · Learn and Apply

LEARN

Longer-term bonds lock in their coupon longer, so their prices are more sensitive to rate changes.

Which bond's price usually changes MORE when interest rates change?

A. A 3-month Treasury bill

B. A 30-year bond

C. A 1-year note

D. Neither; maturity does not matter

GO DEEPER 2 — Bond prices and interest rates

Question 4 of 5 · Learn and Apply

LEARN

Existing bond prices move opposite to interest rates.

If interest rates FALL, what usually happens to the prices of existing bonds?

A. They fall

B. They rise

C. They stay the same

D. They are cancelled

GO DEEPER 2 — Bond prices and interest rates

Question 5 of 5 · Learn and Apply

LEARN

Bond prices before maturity change with interest rates; holders who wait for maturity receive face value (if the issuer pays).

Which investor is MOST affected by bond price swings before maturity?

A. One who holds the bond to maturity

B. One who never bought a bond

C. One who must sell the bond early

D. One who only owns savings

SET 48 · Investing, Brokerage Accounts, and Investment Products

Mutual funds, ETFs, and index funds

MAIN skill: Compare mutual funds, ETFs, and index funds and explain how they are priced

Outcome FL.INVEST.48 · National topic: Investing · NJSLS 9.1.12: FI

Learning target: Compare mutual funds, ETFs, and index funds, including how they are priced and managed

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Pooling money (5 questions)
  - Why: Funds make sense once students see many people's money combined to buy many things.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  - Why: A holding's effect on a fund is its percent weight times its change.
- B3 · Math link → G6-S20-M (Grade 6 6.NS.B.3): Divide multi-digit decimals
  - Why: NAV per share divides net assets by shares outstanding.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Active versus passive funds (5 questions)
- Go Deeper 2: Choosing among funds (5 questions)

Practical skills beyond the standards: Reading a fund prospectus

Content status: stable

Source: SEC Investor.gov — Mutual funds are priced once a day at net asset value; ETF shares trade on exchanges throughout the day at market prices.
https://www.investor.gov/introduction-investing/investing-basics/investment-products/mutual-funds-and-exchange-traded-funds-etfs

MAIN — Compare mutual funds, ETFs, and index funds and explain how they are priced

Question 1 of 5 · Learn and Apply

LEARN

A mutual fund pools money from many investors to buy a collection (portfolio) of stocks, bonds, or other securities, managed by professionals. Each investor owns shares of the fund. Mutual fund shares are bought and sold once a day at the net asset value (NAV) calculated after the market closes.

What is a mutual fund?

A. A pool of investors' money that buys many securities

B. A single company's stock sold at a discount

C. An FDIC-insured savings product at a bank

D. A loan that a group of friends makes together to one person

MAIN — Compare mutual funds, ETFs, and index funds and explain how they are priced

Question 2 of 5 · Learn and Apply

LEARN

An ETF also holds a basket of securities, but its shares trade on stock exchanges throughout the day at market prices, like stocks. Traditional mutual funds trade once a day at NAV.

How is an ETF (exchange-traded fund) different from a traditional mutual fund?

A. ETFs can hold only one stock at a time

B. ETFs are insured by the FDIC

C. ETFs are bought only once a year at one fixed price

D. ETF shares trade on an exchange throughout the day

MAIN — Compare mutual funds, ETFs, and index funds and explain how they are priced

Question 3 of 5 · Learn and Apply

LEARN

An index is a list that measures part of the market; the S&P 500 tracks about 500 large U.S. companies. An index fund (a mutual fund or ETF) holds the securities in an index to match its performance, not to beat it. Index funds usually have low costs.

What does an S&P 500 index fund try to do?

A. Beat the S&P 500 by picking winning stocks each week

B. Guarantee a 5% return every year

C. Hold only the 5 largest companies

D. Match the performance of the S&P 500 index

MAIN — Compare mutual funds, ETFs, and index funds and explain how they are priced

Question 4 of 5 · Learn and Apply

LEARN

Net asset value per share = (total assets − total liabilities) ÷ shares outstanding.

A fund has $50,000,000 in assets, $500,000 in liabilities, and 2,000,000 shares outstanding. What is its NAV per share?

A. $0.04

B. $24.75

C. $25.00

D. $25.25

MAIN — Compare mutual funds, ETFs, and index funds and explain how they are priced

Question 5 of 5 · Knowledge Check

Which statement about index funds is TRUE?

A. They are guaranteed never to lose money

B. They are FDIC insured up to $250,000

C. They can lose value when the market falls

D. They always beat every other type of fund

BACKWARD B1 · concept review — Pooling money

Question 1 of 5 · Learn and Apply

LEARN

Pooling means combining money from many people. Each person owns a share equal to their part of the pool.

Ten friends each put in $20 to buy a $200 gift together. What fraction of the gift does each friend "own"?

A. 1/10

B. 1/20

C. 10

D. 1/200

BACKWARD B1 · concept review — Pooling money

Question 2 of 5 · Learn and Apply

LEARN

In a fund, each holding is a small part of the whole, so one holding's drop has a small effect.

A fund holds 400 different stocks. If one stock falls 50%, why does the fund fall much less?

A. The fund refunds the loss

B. That stock is only a small part of the fund

C. Funds sell any stock before it falls

D. The other 399 stocks in it must all rise by 50%

BACKWARD B1 · concept review — Pooling money

Question 3 of 5 · Knowledge Check

Who manages a mutual fund's investments?

A. Each investor votes on every trade

B. The FDIC

C. Professional fund managers

D. The stock exchange

BACKWARD B1 · concept review — Pooling money

Question 4 of 5 · Learn and Apply

LEARN

A fund share represents a proportional slice of everything the fund holds.

Owning one share of a fund that holds 500 companies gives you…

A. full ownership of one company

B. a tiny piece of all 500 companies

C. a loan to the fund manager, repaid later

D. a bank deposit

BACKWARD B1 · concept review — Pooling money

Question 5 of 5 · Knowledge Check

Which choice is a BENEFIT of funds for beginning investors?

A. Instant diversification with a small amount

B. No risk of loss

C. Guaranteed returns

D. No fees ever

GO DEEPER 1 — Active versus passive funds

Question 1 of 5 · Learn and Apply

LEARN

Active funds try to beat the market by choosing investments; they usually cost more. Passive (index) funds try to match the market at low cost.

An actively managed fund charges 0.80% a year; an index fund tracking a similar market charges 0.05%. On $10,000, how much more does the active fund cost per year?

A. $5

B. $75

C. $80

D. $750

GO DEEPER 1 — Active versus passive funds

Question 2 of 5 · Learn and Apply

LEARN

Net return ≈ gross return − expense ratio.

An active fund returns 7.5% before its 0.80% expense ratio; the index fund returns 7.0% before its 0.05% ratio. Which has the higher return after expenses?

A. The active fund: 7.5% vs 7.0%

B. They are equal at 7.0%

C. The active fund: 6.95% vs 6.70%

D. The index fund: 6.95% vs 6.70%

GO DEEPER 1 — Active versus passive funds

Question 3 of 5 · Learn and Apply

LEARN

Passive investing aims to match the market's return by owning the whole index, rather than predicting which stocks will do best.

What does "passive" investing mean?

A. Holding an index fund instead of trying to pick winners

B. Never checking your account again

C. Investing only in savings accounts

D. Letting a friend choose your stocks

GO DEEPER 1 — Active versus passive funds

Question 4 of 5 · Learn and Apply

LEARN

Trading inside a fund creates costs and, in taxable accounts, can create capital gains distributions.

A fund's "turnover" is high, meaning it trades often. Why can that matter?

A. High turnover guarantees higher returns

B. Frequent trading can raise costs and taxes

C. Turnover has no effect at all on what investors pay

D. Turnover is a type of insurance

GO DEEPER 1 — Active versus passive funds

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Every mutual fund and ETF publishes a prospectus (and a shorter summary) describing its objectives, strategy, risks, and costs.

Which document gives a fund's goals, risks, fees, and past performance?

A. The fund's quarterly advertisement

B. Form 1099-DIV

C. The brokerage account statement

D. The prospectus

GO DEEPER 2 — Choosing among funds

Question 1 of 5 · Learn and Apply

LEARN

When two funds hold nearly the same investments, the lower-cost fund usually leaves more of the return for the investor.

Two S&P 500 index funds track the same index. Fund A charges 0.03%; Fund B charges 0.50%. Which is generally the better choice?

A. Fund B, because higher fees mean better management

B. Either, because fees never matter

C. Fund A, because the holdings are nearly identical and it costs less

D. Fund B, because a higher fee means better management

GO DEEPER 2 — Choosing among funds

Question 2 of 5 · Learn and Apply

LEARN

Indexes differ in what they include. The S&P 500 covers about 500 large U.S. companies; total market indexes include thousands of large, medium, and small companies.

A "total stock market" index fund holds thousands of U.S. companies, large and small. How does it differ from an S&P 500 fund?

A. It holds only 5 large U.S. companies

B. It includes smaller companies too

C. It holds only bonds

D. It cannot lose value

GO DEEPER 2 — Choosing among funds

Question 3 of 5 · Learn and Apply

LEARN

International funds hold companies in other countries, which can add diversification.

An international index fund mainly adds what to a U.S. stock portfolio?

A. Only U.S. government bonds

B. A guarantee against loss

C. Cash that is kept in banks in foreign countries

D. Companies based outside the United States

GO DEEPER 2 — Choosing among funds

Question 4 of 5 · Learn and Apply

LEARN

Some mutual funds have minimum initial investments. ETFs usually require only the price of one share (or less, with fractional shares).

A fund's minimum initial investment is $3,000, but its ETF version can be bought for the price of one share, $95. Sam has $200. Which can he buy?

A. The mutual fund version

B. Both, because minimums do not apply to teens

C. The ETF version

D. Neither

GO DEEPER 2 — Choosing among funds

Question 5 of 5 · Knowledge Check · Practical how-to

Which question is MOST important when choosing a fund for a long-term goal?

A. What does it hold, and what does it cost each year?

B. Did it have the best return of any fund last month?

C. Is it the most popular fund this month?

D. Do my friends own it?

SET 49 · Investing, Brokerage Accounts, and Investment Products

Diversification and asset allocation

MAIN skill: Explain diversification and asset allocation and compute a portfolio's weighted return

Outcome FL.INVEST.49 · National topic: Investing · NJSLS 9.1.12: FI, RM

Learning target: Explain diversification and asset allocation as strategies to manage investment risk

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Spreading risk (5 questions)
  Why: Diversification is "don't put all your eggs in one basket"; students need the idea before the math.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Allocations are percents of a portfolio.
- B3 · Math link → G6-S77-M (Grade 6 6.SP.B.5.c): Find the mean of a data set
  Why: A portfolio return is a weighted mean of its parts' returns.

Question 1 of 5 · Learn and Apply

LEARN

Diversification means spreading money across many investments so that a problem with one has a smaller effect on the whole. It can be across companies, industries, countries, and types of assets (stocks, bonds, cash). Diversification lowers risk but cannot eliminate it or guarantee against loss.

Which portfolio is MOST diversified?

A. Shares of one technology company

B. Three stocks, all airlines

C. A total market index fund plus a bond index fund

D. Shares of a single restaurant chain and its supplier

MAIN — Explain diversification and asset allocation and compute a portfolio's weighted return

Question 2 of 5 · Learn and Apply

LEARN

Asset allocation is how a portfolio is divided among asset classes such as stocks, bonds, and cash. A portfolio's return is the weighted average: (weight × return) for each part, added together.

Jen's portfolio is 60% stocks and 40% bonds. Stocks return 8% and bonds 3% this year. What is the portfolio's return?

A. 4.8%

B. 5.5%

C. 6%

D. 11%

MAIN — Explain diversification and asset allocation and compute a portfolio's weighted return

Question 3 of 5 · Knowledge Check

Which statement about diversification is TRUE?

A. A diversified portfolio cannot lose value

B. It reduces the impact of any single investment but cannot prevent all losses

C. Diversification guarantees a profit every year

D. Owning more shares of one stock is diversification

MAIN — Explain diversification and asset allocation and compute a portfolio's weighted return

Question 4 of 5 · Knowledge Check

Jen has $10,000 invested: 60% stocks, 40% bonds. How much is in stocks?

A. $60

B. $600

C. $4,000

D. $6,000

MAIN — Explain diversification and asset allocation and compute a portfolio's weighted return

Question 5 of 5 · Learn and Apply

LEARN

A longer time horizon allows more time to recover from stock market declines, so younger investors often hold more stocks. People nearing their goal often shift toward bonds and cash.

Generally, which allocation fits a 20-year-old saving for retirement better than a 70-year-old retiree?

A. More stocks, because the time horizon is longer

B. All cash, because young people cannot handle risk

C. All bonds, because stocks are illegal for young investors

D. Exactly the same allocation for everyone

BACKWARD B1 · concept review — Spreading risk

Question 1 of 5 · Learn and Apply

LEARN

When all your money depends on one thing, a problem with that thing affects everything. Spreading out reduces the damage.

A fruit stand sells only bananas. A banana shortage hits. What happens?

A. It is unaffected

B. It earns more because bananas are now scarce

C. Its insurance replaces the lost sales

D. Its whole business suffers

BACKWARD B1 · concept review — Spreading risk

Question 2 of 5 · Knowledge Check

A second stand sells bananas, apples, and oranges. The banana shortage hits. What happens?

A. Only part of its business suffers

B. Its whole business suffers equally

C. It earns nothing at all

D. Its whole business suffers just as much

BACKWARD B1 · concept review — Spreading risk
Question 3 of 5 · Knowledge Check

Which saying describes diversification?

A. "Buy low, sell high."
B. "Slow and steady wins the race."
C. "A penny saved is a penny earned, my friend."
D. "Don't put all your eggs in one basket."

BACKWARD B1 · concept review — Spreading risk

Question 4 of 5 · Learn and Apply

LEARN

Diversification can happen across companies, industries, countries, and asset classes (broad types of investments, such as stocks, bonds, and cash).

Jen owns stocks of 20 U.S. companies and adds a bond fund. What kind of diversification does the bond fund add?

A. Across brokerage firms

B. Across asset classes

C. Across account types

D. Across more companies only

BACKWARD B1 · concept review — Spreading risk

Question 5 of 5 · Learn and Apply

LEARN

Percent of an amount = amount × rate as a decimal.

What is 40% of $5,000?

A. $200

B. $2,000

C. $3,000

D. $20,000

GO DEEPER 1 — Rebalancing

Question 1 of 5 · Learn and Apply

LEARN

Over time, investments grow at different rates, so a portfolio drifts away from its target allocation. Rebalancing means buying or selling to return to the target.

Jen's target is 60% stocks, 40% bonds on $10,000. After a strong year, she has $7,200 in stocks and $3,800 in bonds. What percent is in stocks now (nearest whole)?

A. 35%

B. 60%

C. 65%

D. 72%

GO DEEPER 1 — Rebalancing

Question 2 of 5 · Learn and Apply

LEARN

Target amount = total value × target percent.

To rebalance $11,000 to 60% stocks, what should the stock amount be?

A. $4,400

B. $6,000

C. $6,600

D. $7,200

GO DEEPER 1 — Rebalancing

Question 3 of 5 · Learn and Apply

LEARN

Amount to move = current amount − target amount.

Using a $6,600 stock target, how much stock should Jen sell (moving it to bonds)?

A. $200

B. $600

C. $1,200

D. $6,600

GO DEEPER 1 — Rebalancing

Question 4 of 5 · Learn and Apply

LEARN

Without rebalancing, a portfolio can become riskier than intended as stocks grow.

Why rebalance?

A. To guarantee higher returns

B. Because federal law requires it to be done each month

C. To keep risk at the level the investor chose

D. To avoid ever owning bonds

GO DEEPER 1 — Rebalancing

Question 5 of 5 · Learn and Apply

LEARN

Selling investments at a gain in a taxable account can create capital gains taxes.

Instead of selling, Jen could rebalance by directing new contributions to bonds. Why might that be helpful in a taxable account?

A. It can avoid selling and creating taxable gains

B. It earns guaranteed returns

C. It is required by the IRS

D. It removes all risk

GO DEEPER 2 — Correlation and true diversification

Question 1 of 5 · Learn and Apply

LEARN

Diversification works best when investments do not all move together. Assets that move the same way give little protection; assets that move differently reduce overall swings.

Two stocks always rise and fall together. Does owning both diversify much?

A. Yes, because there are now two different funds

B. Yes, completely

C. No, it doubles the risk

D. Not much, because they move the same way

GO DEEPER 2 — Correlation and true diversification

Question 2 of 5 · Learn and Apply

LEARN

High-quality bonds often behave differently from stocks, especially in downturns, though not always.

Which pair is more likely to diversify a stock-heavy portfolio?

A. Two technology stocks

B. Two airline stocks

C. Stocks and high-quality bonds

D. Two stock funds holding the same companies

GO DEEPER 2 — Correlation and true diversification

Question 3 of 5 · Learn and Apply

LEARN

Funds that track the same index hold the same companies, so owning several adds little diversification.

Sam owns three different S&P 500 index funds. Is he well diversified across funds?

A. Yes, owning three funds triples her overall diversification

B. Not really; the three funds hold almost the same stocks

C. Yes, because each has a different name

D. No, because index funds hold one stock

GO DEEPER 2 — Correlation and true diversification

Question 4 of 5 · Learn and Apply

LEARN

Market risk affects nearly all stocks at once; diversification mainly reduces the risk of individual companies or industries.

In a severe market crash, many stocks fall together. What does this show about diversification across stocks?

A. Diversification always prevents losses

B. Diversified portfolios are immune to crashes

C. Bonds always fall more than stocks

D. It cannot remove market-wide risk

GO DEEPER 2 — Correlation and true diversification

Question 5 of 5 · Learn and Apply

LEARN

Target-date funds hold a mix of stock and bond funds and become more conservative over time.

A target-date fund automatically shifts from stocks toward bonds as the target year approaches. What problem does it solve?

A. It guarantees no losses before the target year

B. It removes all fees

C. It manages allocation and rebalancing for you

D. It invests only in cash

SET 50 · Investing, Brokerage Accounts, and Investment Products

Placing an order: market and limit orders

MAIN skill: Place basic investment orders and explain market orders, limit orders, and the bid-ask spread

Outcome FL.INVEST.50 · National topic: Investing · NJSLS 9.1.12: FI

Learning target: Describe how investments are bought and sold, including order types and trading costs

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Buying at a price (5 questions)
  Why: Orders make sense once students understand that buyers and sellers agree on a price.
- B2 · Math link → G6-S19-M (Grade 6 6.NS.B.3): Multiply multi-digit decimals
  Why: Order costs multiply share prices by numbers of shares.
- B3 · Math link → G6-S17-M (Grade 6 6.NS.B.3): Subtract multi-digit decimals
  Why: The spread is the difference between ask and bid.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Limit orders for selling and stop orders (5 questions)
- Go Deeper 2: Trading costs and practical tips (5 questions)

Practical skills beyond the standards: Placing and verifying an order

Content status: stable

Source: SEC Investor.gov — A market order seeks immediate execution at the best available price, which is not guaranteed; a limit order sets a maximum purchase or minimum sale price and may not execute. https://www.investor.gov/introduction-investing/investing-basics/how-stock-markets-work/types-orders

MAIN — Place basic investment orders and explain market orders, limit orders, and the bid-ask spread

Question 1 of 5 · Learn and Apply

LEARN

To buy an investment, you place an order with your broker. A market order asks to buy or sell right away at the best available price. It usually executes quickly, but the exact price is not guaranteed and can differ from the last price you saw, especially in fast markets.

Kai places a MARKET order to buy 10 shares. What does this mean?

A. Buy only if the price falls to a set amount

B. Buy promptly at the best price available, which is not guaranteed

C. Buy at yesterday's closing price, guaranteed

D. Buy only after the market closes for the day

MAIN — Place basic investment orders and explain market orders, limit orders, and the bid-ask spread

Question 2 of 5 · Learn and Apply

LEARN

A limit order sets the most you will pay (to buy) or the least you will accept (to sell). It executes only at the limit price or better, so it may not execute at all.

Lia places a LIMIT order to buy at $50. The stock is trading at $52. What happens?

A. The order fills only if the price falls to $50 or lower

B. It buys immediately at $52

C. It buys at $52 and refunds $2

D. It buys at exactly $50 no matter what the market price is

MAIN — Place basic investment orders and explain market orders, limit orders, and the bid-ask spread

Question 3 of 5 · Learn and Apply

LEARN

The bid is the highest price buyers are offering; the ask is the lowest price sellers will accept. Buyers usually pay the ask, and sellers receive the bid. The difference is the bid-ask spread.

A stock shows: bid $49.95, ask $50.05. If Omar places a market order to BUY, about what price will he pay?

A. $0.10

B. $49.95

C. $50.00

D. $50.05

MAIN — Place basic investment orders and explain market orders, limit orders, and the bid-ask spread

Question 4 of 5 · Learn and Apply

LEARN

The bid-ask spread = ask − bid. Narrow spreads mean lower trading costs.

Using the bid of $49.95 and ask of $50.05, what is the bid-ask spread?

A. $0.01

B. $0.10

C. $50.00

D. $100.00

MAIN — Place basic investment orders and explain market orders, limit orders, and the bid-ask spread

Question 5 of 5 · Knowledge Check

Kai buys 10 shares at $50.05 and pays no commission. What is the total cost?

A. $50.05

B. $500.05

C. $500.50

D. $5,005.00

BACKWARD B1 · concept review — Buying at a price

Question 1 of 5 · Learn and Apply

LEARN

A trade happens when a buyer and a seller agree on a price. Exchanges match buyers and sellers.

In any market, who decides the price of a trade?

A. A buyer and a seller who agree

B. Only the buyer, by bidding higher

C. The government

D. The bank

BACKWARD B1 · concept review — Buying at a price

Question 2 of 5 · Learn and Apply

LEARN

The asking price is what a seller wants; the offer (bid) is what a buyer will pay.

A seller asks $20 for a used game. A buyer offers $18. What must happen for a sale?

A. The sale happens at $18 automatically

B. The sale happens at $20 automatically

C. One of them changes their price until they agree

D. The sale happens at $38, the two prices added together

BACKWARD B1 · concept review — Buying at a price

Question 3 of 5 · Learn and Apply

LEARN

An order tells your broker what to buy or sell, how many shares (or dollars), and at what kind of price.

What is an "order" when investing?

A. A bill from the broker

B. An instruction to a broker to buy or sell

C. A receipt from a store

D. A monthly fee

BACKWARD B1 · concept review — Buying at a price

Question 4 of 5 · Knowledge Check

Buying 4 shares at $25 each costs how much?

A. $6.25

B. $25

C. $29

D. $100

BACKWARD B1 · concept review — Buying at a price

Question 5 of 5 · Learn and Apply

LEARN

The bid is what buyers offer; the ask is what sellers accept.

Which tells you the LOWEST price a seller will accept right now?

A. The bid

B. The dividend

C. The volume

D. The ask

GO DEEPER 1 — Limit orders for selling and stop orders

Question 1 of 5 · Learn and Apply

LEARN

A sell limit order sets the minimum price you will accept. It executes only at that price or higher.

Ana owns a stock trading at $40. She places a SELL limit order at $45. When can it execute?

A. Immediately at $40

B. Only if the price rises to $45 or higher

C. Only if the price falls to $45 or lower

D. At exactly $45, regardless of the market price

GO DEEPER 1 — Limit orders for selling and stop orders

Question 2 of 5 · Learn and Apply

LEARN

A stop order becomes a market order once the stop price is reached, so the sale price can be worse than the stop price in a fast-moving market.

A stop-loss (stop) order to sell at $35 becomes a market order when the price falls to $35. The price gaps down overnight to $30. What might happen?

A. It sells at exactly $35, which is guaranteed by the order

B. It cancels itself automatically

C. It may sell near $30, below the $35 stop price

D. It buys more shares

GO DEEPER 1 — Limit orders for selling and stop orders

Question 3 of 5 · Knowledge Check

Which order type risks NOT executing at all?

A. A limit order

B. A market order in a heavily traded stock

C. A buy of a widely traded index ETF at market

D. A market sell during trading hours

GO DEEPER 1 — Limit orders for selling and stop orders

Question 4 of 5 · Learn and Apply

LEARN

Orders can be day orders (expire at the end of the trading day) or good-'til-canceled (stay open longer, often up to a time limit set by the broker).

An order marked "good 'til canceled" (GTC) means...

A. it lasts only one minute

B. it is canceled at market open

C. it guarantees execution

D. it stays open until filled or canceled, up to the broker's time limit

GO DEEPER 1 — Limit orders for selling and stop orders

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

For heavily traded funds with narrow spreads, market orders usually fill close to the quoted price, and a limit order at the ask adds price protection.

A long-term investor buys a widely traded index ETF with a narrow spread. Which order type is often reasonable?

A. A limit order near the current ask, or a market order

B. A stop-loss order far below the price

C. A stop order far below the price

D. A sell limit order

GO DEEPER 2 — Trading costs and practical tips

Question 1 of 5 · Learn and Apply

LEARN

A wide spread is a hidden trading cost: buying at the ask and selling at the bid loses the spread on each share.

A thinly traded stock has a bid of $9.50 and an ask of $10.50. Kai buys 100 shares at the ask and immediately sells at the bid. How much does he lose?

A. $0

B. $1

C. $100

D. $1,000

GO DEEPER 2 — Trading costs and practical tips

Question 2 of 5 · Learn and Apply

LEARN

Prices can move quickly at the opening because of overnight news.

Why might placing a market order right when the market opens be risky?

A. Orders are illegal before noon

B. The price is fixed for the first hour

C. Prices can swing sharply at the open

D. Market orders fill only at the previous close

GO DEEPER 2 — Trading costs and practical tips

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Most trading mistakes are simple input errors: wrong ticker, wrong side, or wrong quantity.

Before submitting an order, what should Ana double-check?

A. Yesterday's closing price only

B. The ticker, buy or sell, quantity, and order type

C. Her account's credit limit

D. The number of shares other people bought today

GO DEEPER 2 — Trading costs and practical tips

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Brokers send trade confirmations showing what was bought or sold, the price, quantity, and any fees.

After an order executes, where can Ana verify it?

A. In a social media feed

B. On her credit report

C. In her bank's checking statement

D. In the account's trade confirmation and activity history

GO DEEPER 2 — Trading costs and practical tips

Question 5 of 5 · Learn and Apply

LEARN

Commission-free trading removes a per-trade fee, but other costs remain.

A trading app offers "$0 commissions." Which cost can still apply?

A. The bid-ask spread and fund expense ratios

B. No costs of any kind

C. Sales tax on every share purchased

D. A monthly fee for logging in

SET 51 · Investing, Brokerage Accounts, and Investment Products

Investment fees and expense ratios

MAIN skill: Calculate investment fees and explain how they reduce long-term returns

Outcome FL.INVEST.51 · National topic: Investing · NJSLS 9.1.12: FI

Learning target: Explain how fees and expenses affect investment returns

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Fees as a percent of an amount (5 questions)
  Why: Fee questions are percent-of-an-amount problems with very small percents.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Fees are percents of the amount invested.
- B3 · Math link → ALG1-S55-M (Algebra 1 HSF-LE.A.1.c): Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval
  Why: Fees lower the yearly growth factor, which compounds over time.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Advisory fees and other costs (5 questions)
- Go Deeper 2: Fees and compounding (5 questions)

Practical skills beyond the standards: Reading a fund fee table

Content status: stable

Source: SEC Investor.gov — Ongoing fees such as expense ratios reduce investment returns, and the effect compounds over time. https://www.investor.gov/introduction-investing/investing-basics/understanding-fees

MAIN — Calculate investment fees and explain how they reduce long-term returns

Question 1 of 5 · Learn and Apply

LEARN

An expense ratio is the yearly cost of owning a fund, expressed as a percent of the money invested. It is taken out of the fund's assets automatically, so you never see a bill, but it lowers your return. Annual cost = amount invested × expense ratio.

A fund has an expense ratio of 0.50%. How much does it cost per year on a $8,000 investment?

A. $4

B. $40

C. $50

D. $400

MAIN — Calculate investment fees and explain how they reduce long-term returns

Question 2 of 5 · Learn and Apply

LEARN

Comparing expense ratios in dollars shows how much a fee difference costs you each year.

Two funds hold similar investments. Fund A charges 0.04%; Fund B charges 1.04%. On $20,000, how much more does Fund B cost per year?

A. $8

B. $200

C. $208

D. $2,000

MAIN — Calculate investment fees and explain how they reduce long-term returns

Question 3 of 5 · Learn and Apply

LEARN

Fees reduce returns every year, and the lost growth compounds. A difference that looks small each year can become large over decades.

$10,000 grows for 30 years at 7% a year before fees. With a 0.05% fee, it grows to about $75,063; with a 0.75% fee, about $61,641. How much does the higher fee cost over 30 years?

A. About $210

B. About $2,100

C. About $13,422

D. About $61,641

MAIN — Calculate investment fees and explain how they reduce long-term returns

Question 4 of 5 · Learn and Apply

LEARN

Some mutual funds charge sales loads: a front-end load is taken from each purchase, and a back-end load when you sell. No-load funds do not charge these.

A fund charges a 5.75% "front-end load" (a sales charge) on purchases. Ian invests $1,000. How much is actually invested in the fund?

A. $57.50

B. $942.50

C. $1,000.00

D. $1,057.50

MAIN — Calculate investment fees and explain how they reduce long-term returns

Question 5 of 5 · Knowledge Check

Which statement about investment fees is TRUE?

A. Higher fees guarantee better performance

B. Fees do not matter at all in long-term investing plans

C. Expense ratios are paid only when you sell

D. Lower fees leave more of the return for the investor

BACKWARD B1 · concept review — Fees as a percent of an amount

Question 1 of 5 · Learn and Apply

LEARN

To write a percent as a decimal, divide by 100.

Write 0.25% as a decimal.

A. 0.0025

B. 0.025

C. 0.25

D. 25

BACKWARD B1 · concept review — Fees as a percent of an amount

Question 2 of 5 · Learn and Apply

LEARN

Percent of an amount = amount × decimal.

What is 0.25% of $4,000?

A. $1

B. $10

C. $100

D. $1,000

BACKWARD B1 · concept review — Fees as a percent of an amount

Question 3 of 5 · Knowledge Check

Which is LARGER: 0.1% or 1%?

A. 0.1%

B. 1%

C. They are equal

D. It cannot be compared

BACKWARD B1 · concept review — Fees as a percent of an amount

Question 4 of 5 · Learn and Apply

LEARN

Percent = part ÷ whole × 100.

A $50 yearly fee on a $5,000 account is what percent?

A. 0.1%

B. 1%

C. 10%

D. 50%

BACKWARD B1 · concept review — Fees as a percent of an amount

Question 5 of 5 · Knowledge Check

Why are fund fees easy to overlook?

A. They are always zero for index funds

B. They are taken from the fund automatically, not billed

C. They are paid only by the broker

D. They are billed once a year by mail

GO DEEPER 1 — Advisory fees and other costs

Question 1 of 5 · Learn and Apply

LEARN

Some advisors charge a percent of assets under management (AUM) each year, in addition to fund expenses. Others charge flat or hourly fees.

A financial advisor charges 1% of assets per year. On a $50,000 account, what is the yearly fee?

A. $1

B. $50

C. $500

D. $5,000

GO DEEPER 1 — Advisory fees and other costs

Question 2 of 5 · Learn and Apply

LEARN

Different layers of fees add up.

An account pays a 0.80% fund expense ratio plus a 1.00% advisory fee. What is the total yearly cost as a percent?

A. 0.20%

B. 0.80%

C. 1.00%

D. 1.80%

GO DEEPER 1 — Advisory fees and other costs

Question 3 of 5 · Learn and Apply

LEARN

Net return ≈ gross return − total costs.

If a portfolio earns 7% before costs and pays 1.80% in total costs, what is the approximate net return?

A. 1.80%

B. 5.20%

C. 7.00%

D. 8.80%

GO DEEPER 1 — Advisory fees and other costs

Question 4 of 5 · Learn and Apply

LEARN

12b-1 fees are ongoing fees that some mutual funds charge for marketing and distribution; they are part of the expense ratio.

What does a "12b-1 fee" on a mutual fund pay for?

A. Federal income taxes on fund gains

B. Insurance that protects the fund from losses

C. The fund manager's guaranteed return

D. Marketing and distribution costs, included in the expense ratio

GO DEEPER 1 — Advisory fees and other costs

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Fund prospectuses include a standardized fee table showing sales loads, expense ratios, and other costs.

Where can an investor find all of a fund's fees in one standard table?

A. On the fund's TV commercials

B. On the investor's monthly bank statement

C. The fee table in the fund's prospectus

D. On Form 1099-DIV

GO DEEPER 2 — Fees and compounding

Question 1 of 5 · Learn and Apply

LEARN

The Rule of 72 estimates years to double: 72 ÷ rate.

A 1% yearly fee lowers a 7% return to 6%. Using the Rule of 72, about how much longer does it take money to double?

A. About 2 years longer (12 vs about 10.3)

B. About the same time

C. About 1 month longer

D. Twice as long

GO DEEPER 2 — Fees and compounding

Question 2 of 5 · Learn and Apply

LEARN

Over long periods, the difference between two growth rates compounds.

$10,000 grows at 6% instead of 7% for 30 years. At 7% it reaches about $76,123; at 6% about $57,435. How much does the 1% fee cost?

A. About $18,688

B. About $3,000

C. About $100

D. About $57,435

GO DEEPER 2 — Fees and compounding

Question 3 of 5 · Knowledge Check

Which choice usually has the biggest effect on long-term costs for a beginner?

A. Trading more often to catch every move

B. Paying a sales load for a famous fund

C. Ignoring the expense ratio

D. Choosing low-cost index funds

GO DEEPER 2 — Fees and compounding

Question 4 of 5 · Learn and Apply

LEARN

Yearly savings = amount invested × fee reduction (as a decimal).

A fund's fee drops from 0.60% to 0.10%. On $30,000, how much does that save per year?

A. $30

B. $150

C. $180

D. $1,500

GO DEEPER 2 — Fees and compounding

Question 5 of 5 · Knowledge Check

Which is a better comparison between two funds?

A. Their returns before any fees are taken out of them

B. Their best single year

C. Their returns after fees over the same period

D. Their star ratings alone

SET 52 · Investing, Brokerage Accounts, and Investment Products

Measuring investment returns and risk

MAIN skill: Calculate total and annualized returns, compare nominal and real returns, and describe volatility

Outcome FL.INVEST.52 · National topic: Investing · NJSLS 9.1.12: FI, EG

Learning target: Calculate investment returns and explain risk, volatility, and the effect of inflation

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Percent change and averages (5 questions)
  - Why: Return calculations are percent changes and averages.
- B2 · Math link → G7-S08-M (Grade 7 7.RP.A.3): Find a percent increase or a percent decrease
  - Why: Returns are percent changes from a starting value.
- B3 · Math link → ALG1-S60-M (Algebra 1 HSS-ID.A.2): Compare the center and spread of two or more data sets
  - Why: Volatility compares how spread out two sets of returns are.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 2: Real returns and purchasing power (5 questions)

Practical skills beyond the standards: Comparing compound and average returns

Content status: stable

MAIN — Calculate total and annualized returns, compare nominal and real returns, and describe volatility

Question 1 of 5 · Learn and Apply

LEARN

Total return is the percent change over the whole period. The annualized (compound) return is the steady yearly rate that would produce the same result: (ending ÷ starting)^(1 ÷ years) − 1.

Mia invested $1,000, and five years later it is worth $1,610.51 with no additions. Which annual growth rate, compounded, produces this?

A. 6.1%

B. 10%

C. 12.2%

D. 61%

MAIN — Calculate total and annualized returns, compare nominal and real returns, and describe volatility

Question 2 of 5 · Learn and Apply

LEARN

Total return = (ending − starting) ÷ starting × 100.

Mia's investment rose from $1,000 to $1,610.51. What is the TOTAL return?

A. 6.11%

B. 10.00%

C. 61.05%

D. 161.05%

MAIN — Calculate total and annualized returns, compare nominal and real returns, and describe volatility

Question 3 of 5 · Learn and Apply

LEARN

The nominal return is the stated return. The real return adjusts for inflation and shows the change in purchasing power: real return ≈ nominal return − inflation (more precisely, (1 + nominal) ÷ (1 + inflation) − 1).

An investment returned 8% last year while inflation was 3%. What was the approximate REAL return?

A. About 11%

B. About 5%

C. About 8%

D. About 2.7%

MAIN — Calculate total and annualized returns, compare nominal and real returns, and describe volatility

Question 4 of 5 · Learn and Apply

LEARN

Volatility describes how much returns vary from year to year. Investments with the same average return can have very different volatility; more volatility usually means more risk.

Fund X's yearly returns: 6%, 7%, 5%, 6%. Fund Y's: 20%, −10%, 25%, −11%. Both averaged 6%. Which is more volatile?

A. Fund X

B. Both are equally volatile

C. Fund Y

D. Neither; volatility is the same as average return

MAIN — Calculate total and annualized returns, compare nominal and real returns, and describe volatility

Question 5 of 5 · Knowledge Check

Which statement about investment returns is TRUE?

A. Past returns do not guarantee future returns

B. An average return will be earned every single year

C. Returns from last year predict this year exactly

D. Stocks have never lost money in any year

BACKWARD B1 · concept review — Percent change and averages

Question 1 of 5 · Learn and Apply

LEARN

Percent change = (new − old) ÷ old × 100.

A value goes from $200 to $250. What is the percent increase?

A. 20%

B. 25%

C. 50%

D. 125%

BACKWARD B1 · concept review — Percent change and averages

Question 2 of 5 · Learn and Apply

LEARN

Always divide by the starting (old) value.

A value goes from $250 to $200. What is the percent decrease?

A. 20%

B. 25%

C. 50%

D. 80%

BACKWARD B1 · concept review — Percent change and averages

Question 3 of 5 · Learn and Apply

LEARN

Average = sum ÷ number of values.

What is the average of 4%, 8%, and 6%?

A. 4%

B. 6%

C. 8%

D. 18%

BACKWARD B1 · concept review — Percent change and averages

Question 4 of 5 · Learn and Apply

LEARN

The range (largest − smallest) is a simple measure of spread.

Which set of returns is MOST spread out?

A. 4%, 5%, 6%

B. 5%, 5%, 5%, 5%

C. 3%, 5%, 7%

D. −15%, 5%, 25%

BACKWARD B1 · concept review — Percent change and averages

Question 5 of 5 · Learn and Apply

LEARN

If prices rise faster than your money grows, it buys less.

Prices rise 3% and your savings earn 1%. Can your savings buy more or less than before?

A. More

B. Less

C. Exactly the same

D. It cannot be known at all

GO DEEPER 1 — Average returns versus actual growth

Question 1 of 5 · Learn and Apply

LEARN

A simple average of yearly returns can overstate actual growth when returns swing. The compound (annualized) return reflects what really happened to your money.

An investment returns +50% one year and −50% the next. The simple average is 0%. Starting from $1,000, what is it worth?

A. $500

B. $750

C. $1,000

D. $1,250

GO DEEPER 1 — Average returns versus actual growth

Question 2 of 5 · Learn and Apply

LEARN

Percent changes multiply: a 50% loss after a 50% gain applies to a bigger balance.

For the +50% then −50% example, the compound annual return is about −13.4%. Why is it negative though the simple average is 0%?

A. The bank charged fees

B. Losses hit a larger balance than the gains started from

C. Simple averages are always negative

D. Compound returns ignore losses

GO DEEPER 1 — Average returns versus actual growth

Question 3 of 5 · Learn and Apply

LEARN

Apply each year's growth factor in turn: multiply by (1 + return) for each year.

An index rose 20% one year, then 0%, then 20%. Starting at $1,000, what is it worth?

A. $1,200

B. $1,400

C. $1,440

D. $1,600

GO DEEPER 1 — Average returns versus actual growth

Question 4 of 5 · Learn and Apply

LEARN

The compound annual growth rate (CAGR) is the single steady yearly rate that turns the starting value into the ending value: start × (1 + rate)^years = end.

$1,000 grows to $1,210 in 2 years. What steady yearly rate (compound annual growth rate) produces that?

A. 5%

B. 10%

C. 10.5%

D. 21%

GO DEEPER 1 — Average returns versus actual growth

Question 5 of 5 · Learn and Apply

LEARN

Advertisements can choose time periods that look best.

A fund ad shows only its best 3-year period. What is the problem?

A. Nothing; the best period is most relevant

B. It understates returns

C. It may hide periods of poor performance

D. It hides the fund's name

GO DEEPER 2 — Real returns and purchasing power

Question 1 of 5 · Learn and Apply

LEARN

Exact real return = (1 + nominal) ÷ (1 + inflation) − 1.

Using the exact formula, what is the real return on an 8% nominal return with 3% inflation (nearest hundredth)?

A. 2.67%

B. 4.85%

C. 5.00%

D. 11.24%

GO DEEPER 2 — Real returns and purchasing power

Question 2 of 5 · Learn and Apply

LEARN

Real return ≈ nominal return − inflation. A negative real return means money loses purchasing power.

A savings account pays 2% while inflation is 4%. What is the approximate real return?

A. −2%

B. 0.5%

C. 2%

D. 6%

GO DEEPER 2 — Real returns and purchasing power

Question 3 of 5 · Learn and Apply

LEARN

Real growth, the change in what money can buy, is about the growth rate of the money minus the inflation rate.

$1,000 grows to $1,050 in a year when prices rise 5%. What happened to its purchasing power?

A. It rose by about 5%

B. It fell 5%

C. It rose 10%

D. About the same

GO DEEPER 2 — Real returns and purchasing power

Question 4 of 5 · Knowledge Check

Why do long-term investors care about real returns?

A. Goals like retirement depend on what money will buy

B. Real returns are always higher than nominal returns

C. Taxes are based on real returns

D. Inflation affects only cash, not investments

GO DEEPER 2 — Real returns and purchasing power

Question 5 of 5 · Learn and Apply

LEARN

Money that earns nothing loses purchasing power whenever prices rise.

Which asset is MOST likely to lose purchasing power over 30 years?

A. Cash kept in a non-interest checking account

B. A diversified stock index fund

C. Treasury inflation-protected securities (TIPS)

D. Series I savings bonds

SET 53 · Investing, Brokerage Accounts, and Investment Products

Taxes on investments

MAIN skill: Explain how investment gains and income are taxed and compare taxable and tax-advantaged accounts

Outcome FL.INVEST.53 · National topic: Investing · NJSLS 9.1.12: EG, FI

Learning target: 12-8b compare tax rates on earned income, interest, and capital gains; taxable vs tax-advantaged accounts

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Cost, sale price, and profit (5 questions)
  Why: Capital gains are profit = sale price − cost, which students must find before taxes.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Taxes on gains are a percent of the gain.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Capital losses and tax planning (5 questions)
- Go Deeper 2: Investment income in a tax return (5 questions)

Practical skills beyond the standards: Reading Forms 1099-B, 1099-DIV, and 1099-INT

Content status: time-sensitive

Source: IRS (Topic 409, Capital Gains and Losses) — Gains on assets held more than one year are long-term and taxed at lower rates; net capital losses can offset up to $3,000 of other income per year ($1,500 if married filing separately). https://www.irs.gov/taxtopics/tc409

MAIN — Explain how investment gains and income are taxed and compare taxable and tax-advantaged accounts

Question 1 of 5 · Learn and Apply

LEARN

A capital gain is the profit from selling an investment for more than its cost basis (what you paid, including some fees). In a taxable account, realized gains are generally taxable in the year you sell. A capital loss is the reverse.

Leo bought shares for $2,000 and sold them for $2,600 in a taxable brokerage account. What is his capital gain?

A. $600

B. $2,000

C. $2,600

D. $4,600

MAIN — Explain how investment gains and income are taxed and compare taxable and tax-advantaged accounts

Question 2 of 5 · Learn and Apply

LEARN

Gains on investments held one year or less are short-term and taxed as ordinary income. Gains on investments held more than one year are long-term and taxed at lower rates (0%, 15%, or 20%, depending on income).

Under federal rules, a gain on an investment held for MORE than one year is...

A. short-term, taxed at ordinary income rates

B. long-term, usually taxed at lower rates

C. always tax-free for everyone

D. taxed only if it exceeds $1 million

MAIN — Explain how investment gains and income are taxed and compare taxable and tax-advantaged accounts

Question 3 of 5 · Learn and Apply

LEARN

Comparing tax at two rates shows the dollar value of a longer holding period. (Rates here are hypothetical for this example.)

Assume Leo's $600 long-term gain is taxed at 15% and a short-term gain would be taxed at 22%. How much tax does holding over a year save?

A. $42

B. $90

C. $132

D. $222

MAIN — Explain how investment gains and income are taxed and compare taxable and tax-advantaged accounts

Question 4 of 5 · Learn and Apply

LEARN

In a taxable brokerage account, dividends, interest, and realized gains are taxed each year. Tax-advantaged accounts, such as IRAs and 401(k)s, let investments grow without yearly taxes; taxes are deferred (traditional) or avoided on qualified withdrawals (Roth).

Which account lets investments grow without yearly taxes on dividends and gains?

A. A regular taxable brokerage account in her own name

B. A standard checking account

C. A tax-advantaged retirement account such as an IRA

D. A high-yield savings account

MAIN — Explain how investment gains and income are taxed and compare taxable and tax-advantaged accounts

Question 5 of 5 · Learn and Apply

LEARN

In a taxable account, dividends and interest are generally taxed in the year they are paid, even if reinvested.

A stock fund in a taxable account pays $200 of dividends this year, and Jo does not sell anything. Is anything taxable?

A. No; nothing at all is taxed until she sells the fund

B. No; dividends are never taxed

C. Only if she reinvested the dividends in cash

D. Yes; the dividends are generally taxable this year

BACKWARD B1 · concept review — Cost, sale price, and profit

Question 1 of 5 · Learn and Apply

LEARN

Profit = selling price − cost.

Ana buys a used bike for $120 and sells it for $150. What is her profit?

A. $30

B. $120

C. $150

D. $270

BACKWARD B1 · concept review — Cost, sale price, and profit

Question 2 of 5 · Learn and Apply

LEARN

When the selling price is below cost, the difference is a loss.

A share bought for $50 is sold for $40. What is the result?

A. A $10 loss

B. A $10 gain

C. A $90 gain

D. No gain or loss

BACKWARD B1 · concept review — Cost, sale price, and profit

Question 3 of 5 · Learn and Apply

LEARN

Tax at a rate = amount × rate.

What is 15% of $400?

A. $6

B. $60

C. $415

D. $600

BACKWARD B1 · concept review — Cost, sale price, and profit

Question 4 of 5 · Learn and Apply

LEARN

A gain is long-term if the investment was held more than one year; otherwise it is short-term and taxed like ordinary income.

Jo buys shares on March 1, 2025 and sells them at a gain on February 15, 2026. How is the gain treated?

A. Long-term, since the sale is in a new calendar year

B. Long-term, since she held them close to a year

C. Short-term, since she held them one year or less

D. Tax-free, since she held them over six months

BACKWARD B1 · concept review — Cost, sale price, and profit

Question 5 of 5 · Learn and Apply

LEARN

Cost basis is generally your purchase price, adjusted for some costs and events. Gain = sale proceeds − cost basis.

What is "cost basis"?

A. The current market price

B. What you paid for an investment, used to figure gains

C. The tax rate

D. The broker's profit

GO DEEPER 1 — Capital losses and tax planning

Question 1 of 5 · Learn and Apply

LEARN

Capital losses offset capital gains. If losses exceed gains, a net capital loss can offset up to $3,000 of other income each year ($1,500 if married filing separately), with the rest carried forward to future years.

Jo has a $1,500 capital gain and a $3,000 capital loss in the same year. What is her net capital result?

A. A $4,500 gain

B. A $1,500 gain

C. No gain or loss to report

D. A $1,500 net loss

GO DEEPER 1 — Capital losses and tax planning

Question 2 of 5 · Learn and Apply

LEARN

A net capital loss can offset up to $3,000 of other income per year; unused losses carry forward.

Under the federal limit, a net capital loss of $5,000 can offset how much ordinary income this year (single filer)?

A. $0

B. $1,500

C. $3,000

D. $5,000

GO DEEPER 1 — Capital losses and tax planning

Question 3 of 5 · Learn and Apply

LEARN

"Asset location" means choosing which account holds which investment to reduce taxes.

Why might placing bond funds (which pay taxable interest) in a tax-advantaged account make sense?

A. It shelters the yearly interest from current taxes

B. Bonds cannot legally be held in taxable brokerage accounts

C. It guarantees higher returns

D. It avoids all risk

GO DEEPER 1 — Capital losses and tax planning

Question 4 of 5 · Learn and Apply

LEARN

"Tax drag" is the reduction in growth caused by paying taxes each year.

Two investors earn the same 7% return. One pays 1% of the account in taxes each year; the other is in a tax-deferred account. Who likely ends with more before withdrawals?

A. The taxable investor

B. They end with the same amount

C. The tax-deferred investor

D. It is impossible to tell

GO DEEPER 1 — Capital losses and tax planning

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Brokers send tax forms: 1099-DIV for dividends, 1099-INT for interest, and 1099-B for sales.

Which form reports dividends paid in a taxable brokerage account?

A. Form W-2

B. Form 1099-DIV

C. Form W-4

D. Form 1098-T (tuition)

GO DEEPER 2 — Investment income in a tax return

Question 1 of 5 · Learn and Apply

LEARN

Form 1099-B reports the proceeds from sales and, usually, the cost basis. Gain = proceeds − basis.

Rosa sold shares and received Form 1099-B showing proceeds of $3,200 and cost basis of $2,700. What gain does she report?

A. $500

B. $2,700

C. $3,200

D. $5,900

GO DEEPER 2 — Investment income in a tax return

Question 2 of 5 · Learn and Apply

LEARN

Reinvested dividends were already taxed, so they increase your cost basis; ignoring them can cause you to pay tax twice.

Dividends reinvested automatically buy more shares. How does that affect cost basis?

A. They have no effect on basis

B. They lower the cost basis

C. They are taxed again when the shares are sold, with no basis change

D. The reinvested amounts add to the cost basis

GO DEEPER 2 — Investment income in a tax return

Question 3 of 5 · Learn and Apply

LEARN

Common tax forms: 1099-INT reports interest, 1099-DIV reports dividends, 1099-B reports sales of investments, and W-2 reports wages.

Interest from a savings account of $85 is reported on which form?

A. Form 1099-DIV

B. Form 1099-B

C. Form W-2

D. Form 1099-INT

GO DEEPER 2 — Investment income in a tax return

Question 4 of 5 · Learn and Apply

LEARN

Trades inside IRAs and 401(k)s do not create yearly taxes; taxes depend on the account type and withdrawals.

Which statement about selling investments inside a Roth IRA is TRUE?

A. Gains inside the account are not taxed when sold

B. Each sale is taxed right away as short-term income

C. Every sale must be reported on Form 1099-B and taxed

D. Sales are prohibited until age 59½

GO DEEPER 2 — Investment income in a tax return

Question 5 of 5 · Knowledge Check · Practical how-to

Why should investors keep records of purchase prices and dates?

A. Brokers never keep any records

B. Records raise returns

C. To figure cost basis and holding periods for taxes

D. Records cancel taxes on gains

SET 54 · Investing, Brokerage Accounts, and Investment Products

Speculation, crypto assets, and investment fraud

MAIN skill: Recognize speculation and common investment frauds and protect yourself

Outcome FL.INVEST.54 · National topic: Investing · NJSLS 9.1.12: FI, FP

Learning target: Evaluate investment risks, speculation, and fraud, and identify investor protections

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: If it sounds too good to be true (5 questions)
  - Why: Fraud resistance rests on comparing a claim with realistic returns and risks.
- B2 · Math link → G7-S08-M (Grade 7 7.RP.A.3): Find a percent increase or a percent decrease
  - Why: Judging claimed returns requires comparing percent gains.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Crypto assets: risks and protections (5 questions)
- Go Deeper 2: Protecting yourself and reporting fraud (5 questions)

Practical skills beyond the standards: Checking registration before investing; Reporting investment fraud

Content status: time-sensitive

Source: SEC Investor.gov — Red flags of investment fraud include promises of guaranteed high returns, pressure to act quickly, and unregistered sellers; Ponzi schemes pay earlier investors with new investors' money.
https://www.investor.gov/protect-your-investments/fraud/types-fraud

Source: SEC Investor.gov — Crypto asset investments are highly risky and volatile, and are not FDIC insured or SIPC protected in the same way as deposits and securities at member firms.
https://www.investor.gov/additional-resources/spotlight/crypto-assets

MAIN — Recognize speculation and common investment frauds and protect yourself

Question 1 of 5 · Learn and Apply

LEARN

Red flags of investment fraud include guaranteed high returns with little or no risk, pressure to act quickly, unregistered sellers, and complicated or secret strategies. Legitimate investments carry risk, and no one can guarantee high returns.

A message promises "a guaranteed 20% return every month with no risk." What is the best response?

A. Invest a small amount to test it before investing more

B. Treat it as a likely scam and do not invest

C. Invest quickly before the offer ends tonight

D. Ask the sender for a written guarantee first

MAIN — Recognize speculation and common investment frauds and protect yourself

Question 2 of 5 · Learn and Apply

LEARN

A Ponzi scheme pays existing investors with money from new investors instead of real profits. It collapses when new money slows, and most investors lose money.

In a Ponzi scheme, where does the money paid to early investors come from?

A. From newer investors' money

B. From real profits on the investments

C. From government insurance

D. From interest earned at a bank

MAIN — Recognize speculation and common investment frauds and protect yourself

Question 3 of 5 · Learn and Apply

LEARN

Speculation is buying something mainly hoping its price rises quickly, often without regard to its underlying value. Crypto assets are highly volatile, are not FDIC insured, and have been targets of fraud and "pump-and-dump" schemes.

A crypto token rises 300% in a month after heavy social media promotion. Which statement is MOST accurate?

A. It is guaranteed to keep rising

B. It is protected by FDIC insurance up to $250,000 per owner

C. It is a safe place for an emergency fund

D. It is highly speculative and could fall just as fast

MAIN — Recognize speculation and common investment frauds and protect yourself

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Most people who sell securities or give investment advice must be registered. Investors can check registration and disciplinary history for free.

Before investing through someone, which free tool checks whether they are registered?

A. The person's social media follower count

B. A testimonial video posted online by a satisfied investor

C. FINRA BrokerCheck or the SEC's Investment Adviser search

D. The professional look of their website

MAIN — Recognize speculation and common investment frauds and protect yourself

Question 5 of 5 · Learn and Apply

LEARN

In a pump-and-dump, promoters spread false or misleading hype to push up a price, then sell their shares at the high price, leaving others with losses.

Pumpers buy a little-known stock, hype it online, and sell when others rush in. What is this called?

A. Dollar-cost averaging scheme

B. A pump-and-dump scheme

C. Diversification

D. Rebalancing

BACKWARD B1 · concept review — If it sounds too good to be true

Question 1 of 5 · Learn and Apply

LEARN

Knowing typical returns helps spot offers that are too good to be true. No legitimate investment offers high returns with no risk.

Insured savings pay about 4% a year, and stocks have historically averaged under 10% a year with large swings. A "no-risk 10% per month" offer is…

A. far beyond any realistic, risk-free return

B. reasonable for a new, fast-growing company

C. the same as a savings account

D. normal for index funds

BACKWARD B1 · concept review — If it sounds too good to be true

Question 2 of 5 · Knowledge Check

A stranger online offers to "double your money in a week." What should you assume?

A. It is a normal investment

B. It is very likely a scam

C. It is insured

D. It is approved by the government

BACKWARD B1 · concept review — If it sounds too good to be true

Question 3 of 5 · Learn and Apply

LEARN

Scammers create urgency so victims do not stop to check.

Which is a common pressure tactic?

A. "Take your time and compare all your options first."

B. "Read the prospectus first."

C. "Act now — this opportunity closes tonight!"

D. "Talk to someone you trust."

BACKWARD B1 · concept review — If it sounds too good to be true

Question 4 of 5 · Learn and Apply

LEARN

Payments that are fast and hard to reverse are favored by scammers.

Which payment method do investment scammers often ask for because it is hard to reverse?

A. A credit card with dispute rights

B. A check to a registered broker-dealer

C. An ACH transfer to your own brokerage account

D. Crypto transfers, wires, or gift cards

BACKWARD B1 · concept review — If it sounds too good to be true

Question 5 of 5 · Learn and Apply

LEARN

Pyramid schemes pay mainly for recruiting others, not for real products or profits, and collapse when recruiting slows.

A friend earned money in a "club" that pays you for recruiting new members, not for selling products. What is this most likely?

A. A pyramid scheme

B. A multilevel marketing company that sells real products

C. An investment club that pools money

D. A referral bonus program

GO DEEPER 1 — Crypto assets: risks and protections

Question 1 of 5 · Learn and Apply

LEARN

Crypto assets can lose most of their value quickly. Only money you can afford to lose should be used for speculation.

Kai buys $500 of a crypto asset that falls 80%. What is it worth?

A. $100

B. $400

C. $420

D. $500

GO DEEPER 1 — Crypto assets: risks and protections

Question 2 of 5 · Learn and Apply

LEARN

Crypto assets are not bank deposits and are generally not protected the way deposits or securities at SIPC-member firms are.

Kai's crypto exchange collapses, and customers cannot withdraw. Which protection generally applies to the crypto assets?

A. FDIC insurance up to $250,000 per depositor

B. SIPC insurance on all crypto holdings

C. Automatic refunds from the federal government

D. Usually none like FDIC or SIPC coverage

GO DEEPER 1 — Crypto assets: risks and protections

Question 3 of 5 · Learn and Apply

LEARN

Crypto wallets are controlled by private keys or recovery phrases. Anyone who gets them can take the assets, and lost keys can mean lost assets.

Who controls access to crypto held in a "self-custody" wallet?

A. The FDIC

B. Whoever has the private keys or recovery phrase

C. The crypto exchange that sold the coins

D. The wallet app's customer service team

GO DEEPER 1 — Crypto assets: risks and protections

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Legitimate services never need your recovery phrase.

Someone asks Kai for his crypto wallet recovery phrase to "verify his account." What should he do?

A. Share it, since verification requests like this are routine

B. Share only half of it

C. Refuse; sharing it gives away control of the assets

D. Post it publicly to prove ownership

GO DEEPER 1 — Crypto assets: risks and protections

Question 5 of 5 · Knowledge Check

What share of savings is reasonable for highly speculative assets?

A. All emergency savings

B. Money borrowed on a credit card

C. Only money you could afford to lose entirely

D. Money that is needed for next month's rent payment

GO DEEPER 2 — Protecting yourself and reporting fraud

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

The SEC accepts tips and complaints online; state securities regulators also investigate investment fraud.

Where can an investor report suspected securities fraud?

A. Only to the person running the scheme

B. The SEC (sec.gov/tcr) or the state securities regulator

C. A credit bureau

D. The FDIC

GO DEEPER 2 — Protecting yourself and reporting fraud

Question 2 of 5 · Learn and Apply

LEARN

Ponzi schemes pay early investors with new investors' money. Pump-and-dump schemes hype a cheap stock, then sell. Phishing uses fake messages to steal information. Affinity fraud spreads through trust within a religious, ethnic, or community group.

A scam targets members of a club or faith group by using trust within the group. What is this called?

A. A pyramid scheme

B. Pump-and-dump

C. Phishing

D. Affinity fraud

GO DEEPER 2 — Protecting yourself and reporting fraud

Question 3 of 5 · Learn and Apply

LEARN

Recovery scammers target people who already lost money, promising to get it back for an upfront fee.

After losing money to a scam, Lia gets a call offering to "recover your losses for a fee." What is this most likely?

A. A recovery scam targeting past victims

B. A government refund program

C. A bank's fraud department follow-up

D. A legitimate free service in every case

GO DEEPER 2 — Protecting yourself and reporting fraud

Question 4 of 5 · Knowledge Check · Practical how-to

Which habit gives the best protection against investment fraud?

A. Trusting anyone with a professional website

B. Investing quickly when friends do

C. Verify registration and take time to research before investing

D. Choosing the highest promised return

GO DEEPER 2 — Protecting yourself and reporting fraud

Question 5 of 5 · Learn and Apply

LEARN

Paid promotions must be disclosed, but endorsements do not make an investment safe or valuable.

A celebrity endorses a new token on social media. What should an investor remember?

A. Endorsements may be paid and are not evidence of value

B. Celebrities must guarantee results

C. Endorsed tokens are FDIC insured

D. Endorsements prove the SEC approved it

SET 55 · Retirement Accounts: IRAs, Roth IRAs, 401(k)s, and 403(b)s

Why save for retirement

MAIN skill: Explain why people save for retirement and how decades of compounding affect retirement savings

Outcome FL.RETIRE.55 · National topic: Investing · NJSLS 9.1.12: PB, FI

Learning target: Explain the importance of saving for retirement and the effect of compounding over time

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Retirement means living without a paycheck (5 questions)
  Why: Students need to picture retirement as decades of expenses without wages before retirement accounts make sense.
- B2 · Math link → ALG1-S55-M (Algebra 1 HSF-LE.A.1.c): Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval
  Why: Long-term retirement growth is exponential growth at a percent rate.
- B3 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Replacement goals and Social Security estimates are percents of income.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Estimating how much to save (5 questions)
- Go Deeper 2: The cost of waiting to save for retirement (5 questions)

Practical skills beyond the standards: Estimating a retirement savings goal

Content status: stable

MAIN — Explain why people save for retirement and how decades of compounding affect retirement savings

Question 1 of 5 · Learn and Apply

LEARN

Retirement can last 20 to 30 years or more. Social Security provides a monthly benefit, but for an average worker it replaces only about 40% of pre-retirement earnings. Most people need personal savings, often through workplace plans and IRAs, to cover the rest.

Why do most people need their own retirement savings in addition to Social Security?

A. Social Security pays each retiree twice their old salary

B. Retirement lasts only a few months for most people who retire

C. Employers pay workers forever after they retire

D. Social Security replaces only part of most workers' income

MAIN — Explain why people save for retirement and how decades of compounding affect retirement savings

Question 2 of 5 · Learn and Apply

LEARN

Money invested for decades can grow far beyond what was put in, because growth compounds: A = P(1 + r)^t. (Real returns vary year to year and are not guaranteed.)

At 15, Ana invests $2,000 that earns an assumed 7% a year until she is 65 (50 years). About how much will it grow to?

A. About $9,000

B. About $58,914

C. About $14,000

D. About $2,140

MAIN — Explain why people save for retirement and how decades of compounding affect retirement savings

Question 3 of 5 · Learn and Apply

LEARN

Growth = ending balance − total contributions.

Ben invests $6,000 a year for 40 years. At an assumed 7% a year, the account reaches about $1,197,811. How much of that is GROWTH rather than his contributions?

A. About $240,000

B. About $1,197,811

C. About $1,437,811

D. About $957,811

MAIN — Explain why people save for retirement and how decades of compounding affect retirement savings

Question 4 of 5 · Learn and Apply

LEARN

A replacement goal is the share of pre-retirement income you want in retirement. Savings must fill the gap between that goal and other income such as Social Security.

Lin earns $60,000 before retiring and wants 80% of that income in retirement. Social Security is expected to replace 40% of it. How much per year must come from savings?

A. $12,000

B. $24,000

C. $36,000

D. $48,000

MAIN — Explain why people save for retirement and how decades of compounding affect retirement savings

Question 5 of 5 · Knowledge Check

Which choice gives retirement savings the MOST time to compound?

A. Waiting until age 50 to start saving

B. Starting contributions with a first job

C. Saving only in the final year before retiring

D. Waiting until debt is zero and a house is paid off

BACKWARD B1 · concept review — Retirement means living without a paycheck

Question 1 of 5 · Learn and Apply

LEARN

Retirement is the stage of life after someone stops working full time. Without a paycheck, retirees live on savings, Social Security, and any pensions.

What is retirement?

A. The years after a person stops working for pay

B. A type of bank account

C. A two-week vacation

D. A job promotion

BACKWARD B1 · concept review — Retirement means living without a paycheck

Question 2 of 5 · Learn and Apply

LEARN

Years in retirement = age at death − age at retirement.

If someone retires at 65 and lives to 90, how many years must their money last?

A. 65 years

B. 90 years

C. 25 years

D. 155 years

BACKWARD B1 · concept review — Retirement means living without a paycheck

Question 3 of 5 · Knowledge Check

A retiree spends $3,000 a month. How much is that per year?

A. $250

B. $3,000

C. $30,000

D. $36,000

BACKWARD B1 · concept review — Retirement means living without a paycheck

Question 4 of 5 · Learn and Apply

LEARN

Social Security is a federal program funded by payroll taxes. 401(k)s, IRAs, and brokerage accounts are savings the worker builds.

Which source of retirement income comes from the government?

A. A 401(k) at work

B. A Roth IRA

C. Social Security

D. A brokerage account

BACKWARD B1 · concept review — Retirement means living without a paycheck

Question 5 of 5 · Knowledge Check

Why does a 20-year-old have an advantage in saving for retirement?

A. Young people can contribute more each year than older people

B. Decades of time for growth to compound

C. Retirement accounts pay higher interest rates to young savers

D. Young savers can take money out anytime without rules

GO DEEPER 1 — Estimating how much to save

Question 1 of 5 · Learn and Apply

LEARN

Rules of thumb, such as the "4% guideline," give rough targets: savings needed ≈ first-year withdrawal ÷ 0.04. They are estimates, not guarantees; market returns, inflation, and life span all matter.

A common rule of thumb says a retiree might withdraw about 4% of savings in the first year. Using that rule, how much savings would provide $40,000 in the first year?

A. $40,000

B. $160,000

C. $400,000

D. $1,000,000

GO DEEPER 1 — Estimating how much to save

Question 2 of 5 · Learn and Apply

LEARN

Rules of thumb simplify complex questions. They are starting points for planning, not promises.

Why is the 4% guideline only a rough estimate?

A. It is a federal law for retirement accounts

B. It guarantees savings never run out

C. It applies only to people under 30

D. Future returns, inflation, and life span are uncertain

GO DEEPER 1 — Estimating how much to save

Question 3 of 5 · Learn and Apply

LEARN

Inflation also compounds. At 3% a year, prices double in about 72 ÷ 3 = 24 years.

With prices rising 3% a year, about how much will $40,000 of today's spending cost in 24 years (Rule of 72)?

A. About $80,000

B. About $40,000

C. About $68,800

D. About $160,000

GO DEEPER 1 — Estimating how much to save

Question 4 of 5 · Learn and Apply

LEARN

A savings rate is the percent of income saved: amount = income × rate.

Many planners suggest saving about 10–15% of income for retirement. On a $50,000 salary, what is 15%?

A. $750

B. $5,000

C. $7,500

D. $15,000

GO DEEPER 1 — Estimating how much to save

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

The Social Security Administration provides personalized benefit estimates through online accounts.

Which free tool helps estimate future Social Security benefits?

A. Her most recent pay stub

B. A W-2 form from last year

C. A "my Social Security" account at ssa.gov

D. A retirement calculator on a bank's website

GO DEEPER 2 — The cost of waiting to save for retirement

Question 1 of 5 · Learn and Apply

LEARN

Starting early, even for a few years, can produce more than saving much longer but starting later, because of extra years of compounding. (Examples assume a steady return; real returns vary.)

Saver A invests $3,000 a year from 25 to 34, then stops. At an assumed 7%, the account is about $41,449 at 35 and about $442,537 at 70. How much did Saver A contribute?

A. $3,000

B. $30,000

C. $41,449

D. $442,537

GO DEEPER 2 — The cost of waiting to save for retirement

Question 2 of 5 · Learn and Apply

LEARN

Multiple = ending balance ÷ contributions.

Saver A contributed $30,000 and ended with about $442,537. What multiple of the contributions is that (nearest whole)?

A. About 15 times

B. About 4 times

C. About 1.5 times

D. About 44 times

GO DEEPER 2 — The cost of waiting to save for retirement

Question 3 of 5 · Learn and Apply

LEARN

Present bias makes far-off goals feel less urgent. Automatic payroll contributions help overcome it.

Which reason do young workers MOST often give for not saving for retirement?

A. Retirement accounts are not allowed for workers under 30

B. Retirement feels far away compared with current needs

C. Employers do not let new workers join plans

D. Compounding works only for people who are already older

GO DEEPER 2 — The cost of waiting to save for retirement

Question 4 of 5 · Learn and Apply

LEARN

Automatic contributions happen without a new decision each payday.

Which feature helps overcome present bias in retirement saving?

A. Saving only when they happen to remember

B. Waiting for a bonus

C. Keeping savings in a wallet

D. Automatic payroll contributions

GO DEEPER 2 — The cost of waiting to save for retirement

Question 5 of 5 · Learn and Apply

LEARN

Plan features: auto-enrollment signs workers up by default; automatic escalation raises the contribution rate a little each year; catch-up contributions let workers 50 and older save extra.

Raising a 401(k) contribution by 1% of pay each year until it reaches a target is called…

A. a catch-up contribution

B. automatic escalation

C. a rollover

D. dollar-cost averaging

SET 56 · Retirement Accounts: IRAs, Roth IRAs, 401(k)s, and 403(b)s

401(k) and 403(b) plans at work

MAIN skill: Explain employer retirement plans, employer matching, and the cost of cashing out

Outcome FL.RETIRE.56 · National topic: Investing · NJSLS 9.1.12: PB, FI

Learning target: Compare employer-sponsored retirement plans and explain employer matching and tax treatment

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Employer plans and matching (5 questions)
  Why: Match math depends on understanding that the employer adds money only when the worker contributes.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Contributions and matches are percents of pay.
- B3 · Math link → G7-S07-M (Grade 7 7.RP.A.3): Solve multistep ratio problems
  Why: Match calculations apply two percents in sequence.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Leaving a job: rollover choices (5 questions)
- Go Deeper 2: Plan features: auto-enrollment, Roth options, and loans (5 questions)

Practical skills beyond the standards: Choosing a rollover when changing jobs

Content status: time-sensitive

Source: IRS (401(k) resource guide) — 401(k) plans allow pre-tax or Roth employee deferrals and employer contributions; 403(b) plans are similar plans for public schools and certain nonprofits. https://www.irs.gov/retirement-plans/401k-plans

MAIN — Explain employer retirement plans, employer matching, and the cost of cashing out

Question 1 of 5 · Learn and Apply

LEARN

A 401(k) is a retirement plan offered by many private employers. A 403(b) is a similar plan offered by public schools, colleges, hospitals, and many nonprofits. Both let workers save part of each paycheck, often with tax benefits and sometimes an employer match.

Who usually offers a 403(b) plan instead of a 401(k)?

A. Every private technology company and its contractors

B. State and federal tax agencies to taxpayers

C. Banks to their savings customers

D. Public schools and many nonprofit organizations

MAIN — Explain employer retirement plans, employer matching, and the cost of cashing out

Question 2 of 5 · Learn and Apply

LEARN

An employer match adds money when you contribute. Contributing at least enough to get the full match is often called "free money."

Raj earns $55,000. His employer matches 50% of his contributions up to 6% of pay. Raj contributes 6%. How much does the employer add per year?

A. $330

B. $1,650

C. $3,300

D. $4,950

MAIN — Explain employer retirement plans, employer matching, and the cost of cashing out

Question 3 of 5 · Learn and Apply

LEARN

Traditional 401(k) contributions are pre-tax: they lower taxable income now. Taxes are paid later on withdrawals. Roth 401(k) contributions are after-tax, with tax-free qualified withdrawals.

Raj contributes $3,300 to a traditional (pre-tax) 401(k), and his top federal tax rate is 12%. About how much federal income tax does this save this year?

A. $39.60

B. $396

C. $2,904

D. $3,300

MAIN — Explain employer retirement plans, employer matching, and the cost of cashing out

Question 4 of 5 · Learn and Apply

LEARN

When leaving a job, you can usually leave the money in the old plan, roll it into a new employer's plan, or roll it into an IRA. Cashing out before 59½ usually means income tax plus a 10% additional tax, unless an exception applies.

Maya leaves a job with $10,000 in her 401(k) and is under 59½. If she cashes it out, assume 22% federal income tax plus a 10% additional tax for early withdrawal. How much is left?

A. $6,800

B. $7,800

C. $9,000

D. $10,000

MAIN — Explain employer retirement plans, employer matching, and the cost of cashing out

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

In a direct rollover, the old plan sends the money straight to the new IRA or plan, so taxes stay deferred.

Which choice usually keeps Maya's retirement money growing with taxes still deferred?

A. A direct rollover to an IRA or new plan

B. Cashing out and spending it

C. Withdrawing it to pay for a vacation

D. Having a check mailed and keeping it for a year

BACKWARD B1 · concept review — Employer plans and matching

Question 1 of 5 · Learn and Apply

LEARN

With a match, the employer contributes to your retirement account in proportion to what you contribute, up to a limit.

What does an employer "match" mean?

A. The employer pays the worker's taxes

B. The worker must repay the employer later, with interest added

C. The employer adds money based on what the worker contributes

D. The employer chooses the worker's investments

BACKWARD B1 · concept review — Employer plans and matching

Question 2 of 5 · Learn and Apply

LEARN

Match = matching rate × the worker's contribution, up to the plan's limit.

A plan matches 100% up to 4% of pay. A worker earning $40,000 contributes 4%. How much is the match?

A. $160

B. $800

C. $1,600

D. $3,200

BACKWARD B1 · concept review — Employer plans and matching

Question 3 of 5 · Learn and Apply

LEARN

A match is paid only on what the worker contributes.

If that worker contributes 0%, what is the match?

A. $0

B. $400

C. $800

D. $1,600

BACKWARD B1 · concept review — Employer plans and matching
Question 4 of 5 · Knowledge Check

What is "free money" in a 401(k)?

A. Money that the government gives every worker each year
B. The employer match a worker receives by contributing
C. A loan from the plan
D. The tax refund a worker gets for contributing

BACKWARD B1 · concept review — Employer plans and matching

Question 5 of 5 · Learn and Apply

LEARN

To get the full match, contribute at least the percent the employer will match.

Which worker gets the FULL match under "50% up to 6% of pay"?

A. One contributing 6% or more

B. One contributing 1%

C. One contributing 3% of salary

D. One contributing nothing

GO DEEPER 1 — Leaving a job: rollover choices

Question 1 of 5 · Learn and Apply

LEARN

When you leave a job, you can roll a 401(k) into an IRA or a new employer plan. A direct (trustee-to-trustee) rollover avoids taxes and penalties.

Which statement about rolling a 401(k) into an IRA is TRUE?

A. Every rollover is fully taxed

B. Rollovers are allowed only at age 65

C. A direct rollover avoids taxes and penalties

D. A check paid to her has no tax withheld

GO DEEPER 1 — Leaving a job: rollover choices

Question 2 of 5 · Learn and Apply

LEARN

If a plan pays the money to you instead of directly to the new account, it generally must withhold 20% for taxes; to avoid tax on the withheld part, you must make it up from other funds within 60 days.

With an indirect rollover, the plan withholds 20% and the worker has 60 days to deposit the full amount into an IRA. On $10,000, how much is withheld?

A. $200

B. $1,000

C. $2,000

D. $6,000

GO DEEPER 1 — Leaving a job: rollover choices

Question 3 of 5 · Learn and Apply

LEARN

To complete the rollover tax-free, the full original amount must be deposited within 60 days.

In that indirect rollover, how much must the worker deposit within 60 days to avoid tax on any of the $10,000?

A. $8,000 only

B. $2,000 only

C. Nothing; the rollover is fully automatic for him

D. $10,000, including $2,000 from other money

GO DEEPER 1 — Leaving a job: rollover choices

Question 4 of 5 · Learn and Apply

LEARN

Old accounts left at many past employers can be forgotten. Consolidating can simplify tracking.

Why might keeping a small old 401(k) in a former employer's plan be inconvenient?

A. It is illegal to keep money in an old employer's plan

B. It is easy to lose track of old accounts

C. It stops earning returns once she leaves

D. The employer can take back her own contributions

GO DEEPER 1 — Leaving a job: rollover choices

Question 5 of 5 · Knowledge Check · Practical how-to

Which step should Maya take FIRST when leaving her job?

A. Request a cash check to spend

B. Forget the account

C. Ask the employer to return all the money as cash

D. Ask the plan for her rollover options and set up a direct rollover

GO DEEPER 2 — Plan features: auto-enrollment, Roth options, and loans

Question 1 of 5 · Learn and Apply

LEARN

Defaults are powerful: when saving is automatic, most people keep it. Workers can usually change the rate or opt out.

Many plans auto-enroll new workers at 3% of pay unless they opt out. Why does auto-enrollment raise saving?

A. People tend to keep the default

B. It doubles the match automatically

C. It removes all investment risk

D. It lowers the worker's salary

GO DEEPER 2 — Plan features: auto-enrollment, Roth options, and loans

Question 2 of 5 · Learn and Apply

LEARN

Roth 401(k) contributions are after-tax. Qualified withdrawals, including earnings, are tax-free.

A plan offers a Roth 401(k). How are contributions taxed?

A. Never taxed at any time

B. Deducted now and taxed at withdrawal

C. Taxed now; qualified withdrawals later are tax-free

D. Taxed only if the market rises

GO DEEPER 2 — Plan features: auto-enrollment, Roth options, and loans

Question 3 of 5 · Learn and Apply

LEARN

A 401(k) loan is repaid to your own account, but the money is not invested while borrowed, and leaving your job can make the remaining balance due quickly or treated as a taxable distribution.

Some plans allow loans. Leo borrows $5,000 from his 401(k). What is a key risk?

A. If he leaves his job, the loan may soon be due

B. Loans are always forgiven

C. The loan raises his credit score

D. There is no effect at all on his retirement savings

GO DEEPER 2 — Plan features: auto-enrollment, Roth options, and loans

Question 4 of 5 · Learn and Apply

LEARN

Retirement plans have yearly contribution limits that change over time; check the current year's limits at irs.gov. This question uses a stated hypothetical limit.

Assume a yearly 401(k) employee contribution limit of $23,000 for a scenario. Ana earns $100,000. What is the most she can defer?

A. $2,300

B. $10,000

C. $23,000

D. $100,000

GO DEEPER 2 — Plan features: auto-enrollment, Roth options, and loans

Question 5 of 5 · Learn and Apply

LEARN

Plans offer a menu of funds. Target-date funds shift from stocks toward bonds as their target year approaches.

Which investment option inside a 401(k) automatically becomes more conservative as retirement nears?

A. A single company stock fund

B. A target-date fund

C. A money market fund

D. A sector fund

SET 57 · Retirement Accounts: IRAs, Roth IRAs, 401(k)s, and 403(b)s

IRAs: traditional and Roth

MAIN skill: Explain what an IRA is and compare traditional and Roth IRA tax treatment

Outcome FL.RETIRE.57 · National topic: Investing · NJSLS 9.1.12: PB, EG

Learning target: Compare traditional and Roth retirement accounts and their tax treatment

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Pay tax now or pay tax later (5 questions)
  Why: The Roth versus traditional choice is a financial-concept prerequisite: when the tax is paid.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Comparing accounts applies tax rates to contributions or withdrawals.
- B3 · Math link → G7-S07-M (Grade 7 7.RP.A.3): Solve multistep ratio problems
  Why: The comparison chains tax and growth factors.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 2: IRAs compared with 401(k)s (5 questions)

Practical skills beyond the standards: Choosing between Roth and traditional accounts

Content status: time-sensitive

Source: IRS (Publication 590-A and 590-B) — IRA contributions require taxable compensation (earned income) and are limited to the lesser of the annual limit or compensation; Roth contributions are not deductible; qualified Roth distributions are tax-free. https://www.irs.gov/retirement-plans/individual-retirement-arrangements-iras

MAIN — Explain what an IRA is and compare traditional and Roth IRA tax treatment

Question 1 of 5 · Learn and Apply

LEARN

An IRA (individual retirement account, officially "arrangement") is a personal retirement account that you open yourself, not through an employer. IRAs give tax advantages in exchange for rules about contributions and withdrawals. Money in an IRA can be invested in stocks, bonds, funds, and more.

What is an IRA?

A. An insured checking account for retirees

B. A government pension that is paid to every American worker

C. An individual retirement account with tax advantages

D. A loan program for people near retirement

MAIN — Explain what an IRA is and compare traditional and Roth IRA tax treatment

Question 2 of 5 · Learn and Apply

LEARN

IRAs get special tax treatment. In return, withdrawals of earnings before age 59½ generally face taxes and a 10% additional tax unless an exception applies.

What makes an IRA a RETIREMENT account rather than an ordinary investment account?

A. It can hold only cash, never investments

B. It is insured by the FDIC against losses

C. It is opened only after age 65

D. Tax benefits come with rules that discourage early withdrawals

MAIN — Explain what an IRA is and compare traditional and Roth IRA tax treatment

Question 3 of 5 · Learn and Apply

LEARN

Roth IRA: you contribute money you have already paid tax on (no deduction now). The account grows tax-free, and qualified withdrawals in retirement are tax-free.

Which describes a ROTH IRA?

A. Contributions are made with after-tax money; qualified withdrawals are tax-free

B. Contributions are always tax-deductible; all withdrawals are taxed as income later

C. There are no taxes at any stage, including contributions

D. Contributions are deductible; qualified withdrawals are tax-free

MAIN — Explain what an IRA is and compare traditional and Roth IRA tax treatment

Question 4 of 5 · Learn and Apply

LEARN

Traditional IRA: contributions may be tax-deductible (depending on income and workplace plan coverage). The account grows tax-deferred, and withdrawals are taxed as ordinary income.

Which describes a TRADITIONAL IRA?

A. Contributions are after-tax; qualified withdrawals are completely tax-free

B. Contributions may be tax-deductible; withdrawals are taxed as income

C. It can be opened only by employers

D. It pays a fixed interest rate set by law

MAIN — Explain what an IRA is and compare traditional and Roth IRA tax treatment

Question 5 of 5 · Learn and Apply

LEARN

Roth: tax first, then tax-free growth. Traditional: grow first, then tax. If the tax rate is the same now and later, the results match.

$1,000 of earnings is put toward retirement. In a Roth, tax of 12% is paid first, so $880 is invested; in a traditional IRA, the full $1,000 is invested and taxed at 12% on withdrawal. Both grow 4 times. After taxes, what does each provide?

A. Roth $3,520; traditional $4,000

B. Roth $880; traditional $1,000

C. Both provide $3,520

D. Roth $4,000; traditional $3,520

BACKWARD B1 · concept review — Pay tax now or pay tax later

Question 1 of 5 · Learn and Apply

LEARN

Two ways to get a tax break: pay tax now and skip it later (Roth), or skip tax now and pay it later (traditional).

With a Roth account, WHEN is income tax paid on the money you contribute?

A. When it is withdrawn in retirement

B. Never; Roth money is never taxed

C. Every year on all growth

D. Before it goes in

BACKWARD B1 · concept review — Pay tax now or pay tax later

Question 2 of 5 · Learn and Apply

LEARN

In a traditional account, tax is usually put off until the money is withdrawn.

With a traditional account, WHEN is income tax usually paid?

A. When money is withdrawn

B. Before it goes in

C. Never; traditional money is never taxed

D. Every year on the account's growth

BACKWARD B1 · concept review — Pay tax now or pay tax later

Question 3 of 5 · Learn and Apply

LEARN

Paying tax when your rate is lower saves money.

If someone expects a HIGHER tax rate in retirement than now, which type often makes more sense?

A. Traditional

B. Roth

C. Neither; it never matters

D. A regular taxable account

BACKWARD B1 · concept review — Pay tax now or pay tax later

Question 4 of 5 · Learn and Apply

LEARN

Many young workers are in low tax brackets now.

A young worker in a low tax bracket today expects to earn more later. Which IRA is often recommended?

A. A traditional IRA

B. No IRA

C. A Roth IRA

D. A taxable brokerage account

BACKWARD B1 · concept review — Pay tax now or pay tax later

Question 5 of 5 · Knowledge Check

Which statement is TRUE for both Roth and traditional IRAs?

A. Contributions are always deductible from taxable income

B. Withdrawals are always tax-free

C. They are FDIC insured

D. Investments inside grow without yearly taxes

GO DEEPER 1 — When Roth or traditional comes out ahead

Question 1 of 5 · Learn and Apply

LEARN

When the tax rate later is higher than now, paying tax now (Roth) wins; when it is lower later, traditional wins.

$1,000 of earnings: Roth taxed at 12% now; traditional taxed at 22% at withdrawal. Both grow 4 times. Which provides more after tax?

A. Traditional: $3,520 vs $3,120

B. They are equal at $3,520

C. Roth: $3,520 vs $3,120

D. Traditional: $4,000 vs $3,520

GO DEEPER 1 — When Roth or traditional comes out ahead

Question 2 of 5 · Learn and Apply

LEARN

Roth: tax now at today's rate, then tax-free. Traditional: full amount grows, then taxed at the later rate.

If the rate now is 22% and later 12%, which provides more from $1,000 that grows 4 times?

A. Roth: $3,520 vs $3,120

B. They are equal

C. Roth: $4,000 vs $3,520 after tax

D. Traditional: $3,520 vs $3,120

GO DEEPER 1 — When Roth or traditional comes out ahead

Question 3 of 5 · Learn and Apply

LEARN

No one knows their future tax rate for sure.

Why do some people split savings between Roth and traditional accounts?

A. Future tax rates are uncertain, so splitting spreads the risk

B. The law requires both account types

C. Splitting doubles the contribution limit

D. Splitting removes all taxes

GO DEEPER 1 — When Roth or traditional comes out ahead

Question 4 of 5 · Learn and Apply

LEARN

Traditional IRAs require minimum withdrawals starting in your 70s (the exact age depends on birth year). Roth IRAs do not require withdrawals during the original owner's life.

Which account has NO required minimum distributions during the original owner's lifetime?

A. A traditional IRA

B. A Roth IRA

C. A traditional 401(k) for a retired worker

D. Every retirement account

GO DEEPER 1 — When Roth or traditional comes out ahead

Question 5 of 5 · Learn and Apply

LEARN

A deduction lowers taxable income; tax saved ≈ deduction × tax rate.

A traditional IRA contribution is deductible for Ana, whose rate is 12%. She contributes $2,000. About how much tax does she save now?

A. $24

B. $240

C. $1,760

D. $2,000

GO DEEPER 2 — IRAs compared with 401(k)s

Question 1 of 5 · Learn and Apply

LEARN

401(k) and 403(b) plans are set up by employers, often with matches and payroll deductions. IRAs are opened individually at a financial institution.

Which statement compares IRAs and 401(k)s correctly?

A. Only IRAs can have employer matches

B. 401(k)s cannot hold mutual funds

C. A 401(k) is offered through an employer; an IRA is opened by an individual

D. IRAs are offered only by employers

GO DEEPER 2 — IRAs compared with 401(k)s

Question 2 of 5 · Learn and Apply

LEARN

Employer plans offer a set menu of funds. IRAs at brokerage firms can usually hold almost any stock, bond, or fund.

Which account usually offers the WIDER choice of investments?

A. An IRA at a brokerage firm

B. A 401(k) with a set menu of funds

C. A checking account

D. A certificate of deposit

GO DEEPER 2 — IRAs compared with 401(k)s

Question 3 of 5 · Learn and Apply

LEARN

Workplace plan participation can affect whether a traditional IRA contribution is deductible, but you can generally contribute to both.

Can a worker contribute to both a 401(k) and an IRA in the same year?

A. No, it is illegal to have both

B. Yes, within each account's rules

C. Only if the saver is over age 50

D. Only if the 401(k) has no match

GO DEEPER 2 — IRAs compared with 401(k)s

Question 4 of 5 · Learn and Apply

LEARN

A common priority: contribute enough to get the full employer match, then use an IRA, then add more to the workplace plan.

A worker's employer offers a 401(k) with a match. Which order of saving do many planners suggest?

A. Skip the match and use only an IRA

B. Use only a taxable account

C. Save nothing until 40

D. Get the full 401(k) match first, then consider an IRA

GO DEEPER 2 — IRAs compared with 401(k)s

Question 5 of 5 · Learn and Apply

LEARN

IRAs belong to the individual, not to an employer.

Which account follows a worker from job to job without a rollover?

A. An IRA

B. A 401(k) at a past employer

C. A pension at a former job

D. An employer stock plan

SET 58 · Retirement Accounts: IRAs, Roth IRAs, 401(k)s, and 403(b)s

Roth IRA eligibility and contribution rules

MAIN skill: Apply Roth IRA eligibility, earned-income, contribution-limit, and deadline rules

Outcome FL.RETIRE.58 · National topic: Earning Income · NJSLS 9.1.12: PB, EG

Learning target: 12-8a distinguish earned from unearned income; retirement account eligibility rules

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Earned versus unearned income (5 questions)
  Why: IRA eligibility depends on telling earned income apart from other money (national outcome 12-8a).
- B2 · Math link → G7-S34-M (Grade 7 7.EE.B.4.b): Solve word problems that lead to inequalities of the form px + q > r or px + q < r
  Why: Contribution rules are inequalities: contribution ≤ the limit and ≤ earned income.
- B3 · Math link → G4-S18-M (Grade 4 4.NBT.A.2): Compare multi-digit whole numbers using >, =, and <
  Why: "The lesser of" two amounts requires comparing numbers.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Custodial Roth IRAs for teens (5 questions)
- Go Deeper 2: Contribution mistakes and fixes (5 questions)

Practical skills beyond the standards: Custodial Roth IRAs for teens; Correcting excess contributions

Content status: time-sensitive

Source: IRS (Publication 590-A and 590-B) — IRA contributions require taxable compensation (earned income) and are limited to the lesser of the annual limit or compensation; Roth contributions are not deductible; qualified Roth distributions are tax-free. https://www.irs.gov/retirement-plans/individual-retirement-arrangements-iras

Source: IRS (Retirement topics: IRA contribution limits) — The IRA contribution limit and Roth income limits change by tax year; this course uses stated hypothetical amounts. https://www.irs.gov/retirement-plans/plan-participant-employee/retirement-topics-ira-contribution-limits

Source: IRS (Publication 590-A) — Excess IRA contributions are subject to a 6% excise tax for each year they remain in the account; contributions for a year can be made until the tax return due date (not including extensions). https://www.irs.gov/publications/p590a

Note: Contribution and income limits are stated as hypothetical amounts; check irs.gov for the current tax year.

MAIN — Apply Roth IRA eligibility, earned-income, contribution-limit, and deadline rules

Question 1 of 5 · Learn and Apply

LEARN

To contribute to an IRA, you must have earned income (taxable compensation), such as wages, salaries, tips, or net self-employment earnings. Gifts, allowances, interest, and dividends do not count. There is no minimum age.

Kai, 16, wants to contribute to a Roth IRA. Which of his income counts as earned income for IRA purposes?

A. $500 of birthday gifts from relatives

B. $2,400 in wages from a part-time job

C. $300 of interest from a savings account

D. A $1,000 weekly allowance from parents

MAIN — Apply Roth IRA eligibility, earned-income, contribution-limit, and deadline rules

Question 2 of 5 · Learn and Apply

LEARN

The most you can contribute to IRAs for a year is the LESSER of the annual limit or your earned income for that year.

For this scenario, assume the annual IRA contribution limit is $7,000. Kai earned $3,200 from his job this year. What is the most he can contribute to a Roth IRA for the year?

A. $0

B. $3,200

C. $7,000

D. $10,200

MAIN — Apply Roth IRA eligibility, earned-income, contribution-limit, and deadline rules

Question 3 of 5 · Knowledge Check

Assume a $7,000 limit. Ana earned $45,000 this year. What is the most she can put into her Roth IRA?

A. $4,500

B. $7,000

C. $45,000

D. $52,000

MAIN — Apply Roth IRA eligibility, earned-income, contribution-limit, and deadline rules

Question 4 of 5 · Learn and Apply

LEARN

Roth IRAs have income limits: above a certain modified adjusted gross income (MAGI), direct Roth contributions are reduced or not allowed. The limits change each year. Traditional IRA contributions have no income cap, though deductibility can be limited.

Roth IRA eligibility also depends on income. For this scenario, assume single filers can contribute fully below $150,000 of modified income and not at all above $165,000. Leo's modified income is $172,000. Can he contribute directly to a Roth IRA?

A. Yes, the full amount, because he has earned income

B. Yes, but only half the limit

C. Yes, if he contributes before January

D. No; his income is above the limit

MAIN — Apply Roth IRA eligibility, earned-income, contribution-limit, and deadline rules

Question 5 of 5 · Learn and Apply

LEARN

IRA contributions for a tax year can be made from January 1 of that year through the tax return due date (usually mid-April of the next year), not including extensions.

Until when can a contribution for a given tax year usually be made?

A. Only until December 31 of that year

B. Any time in the next five years

C. Until the tax-filing deadline the following April

D. Only during the calendar month of the person's next birthday

BACKWARD B1 · concept review — Earned versus unearned income

Question 1 of 5 · Learn and Apply

LEARN

Earned income is pay for work: wages, salaries, tips, and self-employment earnings. Unearned income includes interest, dividends, and capital gains. Gifts are not income to the person receiving them for tax purposes.

Which is EARNED income?

A. Interest on savings deposits

B. Stock dividends

C. A cash gift

D. Tips from waiting tables

BACKWARD B1 · concept review — Earned versus unearned income

Question 2 of 5 · Learn and Apply

LEARN

Unearned income comes from money or property, not from work.

Which is UNEARNED income?

A. Wages from a summer job

B. Dividends from a stock fund

C. Pay for babysitting

D. Self-employment earnings from mowing lawns

BACKWARD B1 · concept review — Earned versus unearned income

Question 3 of 5 · Learn and Apply

LEARN

Only pay for work counts as earned income.

Mia earned $1,800 babysitting and received $600 in gifts. How much earned income does she have?

A. $600

B. $1,200

C. $1,800

D. $2,400

BACKWARD B1 · concept review — Earned versus unearned income

Question 4 of 5 · Learn and Apply

LEARN

The IRA rule uses the lesser (smaller) of two numbers.

Which number is SMALLER: $2,500 or $7,000?

A. $7,000

B. They are equal

C. $2,500

D. $9,500

BACKWARD B1 · concept review — Earned versus unearned income

Question 5 of 5 · Learn and Apply

LEARN

Earned income has no age requirement.

Does a 15-year-old with a paying job have earned income?

A. Yes, the wages are earned income

B. No, minors cannot have earned income

C. Only after age 18

D. Only if paid in cash

GO DEEPER 1 — Custodial Roth IRAs for teens

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

Minors with earned income can have Roth IRAs. Many providers offer custodial Roth IRAs: an adult custodian opens and manages the account for the minor, and the minor gains control at the age set by law.

Kai, 16, has earned income. How can he have a Roth IRA if the provider requires adult account owners?

A. He cannot have one until age 21

B. He uses a friend's Roth IRA

C. His employer must open it for him

D. A parent or guardian opens a custodial Roth IRA for him

GO DEEPER 1 — Custodial Roth IRAs for teens

Question 2 of 5 · Learn and Apply

LEARN

The contribution amount is limited by earned income, but the actual dollars contributed do not have to be the same dollars earned.

Kai's parents give him $1,000 to put into his Roth IRA, and he earned $1,500 at work. Assuming a $7,000 limit, can $1,000 be contributed?

A. No, contributions must come from his own paycheck dollars only

B. Yes, as long as the total contributed does not exceed $1,500

C. Yes, up to $7,000 total

D. No, gifts are never allowed in IRAs

GO DEEPER 1 — Custodial Roth IRAs for teens

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

If questioned, you must show earned income at least equal to IRA contributions.

Why keep records of a teen's earned income, such as pay stubs or a babysitting log?

A. Because the IRS requires the records to be mailed in every month

B. Because records raise the yearly limit

C. To show the IRA contributions did not exceed earned income

D. Because the provider must approve each contribution

GO DEEPER 1 — Custodial Roth IRAs for teens

Question 4 of 5 · Learn and Apply

LEARN

A = P(1 + r)^t.

Kai contributes $1,500 at 16, and it grows at an assumed 7% until 65 (49 years). About how much will it be?

A. About $41,000

B. About $1,600

C. About $6,600

D. About $105,000

GO DEEPER 1 — Custodial Roth IRAs for teens

Question 5 of 5 · Learn and Apply

LEARN

In a custodial account, the minor owns the assets; the adult manages them until control transfers.

Who owns the money in Kai's custodial Roth IRA?

A. His parent, permanently

B. Kai

C. The brokerage firm

D. The IRS

GO DEEPER 2 — Contribution mistakes and fixes

Question 1 of 5 · Learn and Apply

LEARN

Contributions above the allowed amount are "excess contributions." They are charged a 6% excise tax for each year they remain in the account, unless corrected in time.

For this scenario, assume a $7,000 limit. Ana contributes $7,500 to her Roth IRA. How much is an excess contribution?

A. $0

B. $500

C. $7,000

D. $7,500

GO DEEPER 2 — Contribution mistakes and fixes

Question 2 of 5 · Learn and Apply

LEARN

The excise tax on an excess contribution = excess × 6%, for each year it remains.

If the $500 excess stays in the account for a year, what is the 6% excise tax?

A. $3

B. $30

C. $300

D. $450

GO DEEPER 2 — Contribution mistakes and fixes

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Excess contributions can be corrected by withdrawing the excess and any earnings on it by the tax return due date.

How can Ana usually fix an excess contribution?

A. Withdraw the excess (and its earnings) before the tax deadline

B. Ignore it; it fixes itself

C. Contribute more to balance it

D. Move it to her checking and tell no one

GO DEEPER 2 — Contribution mistakes and fixes

Question 4 of 5 · Learn and Apply

LEARN

IRA contributions require earned income (taxable compensation).

Leo has no job this year, only $200 of interest income. Can he contribute to an IRA?

A. Yes, up to $200 of interest

B. Yes, up to the full limit

C. No; he has no earned income

D. Yes, if he contributes in January

GO DEEPER 2 — Contribution mistakes and fixes

Question 5 of 5 · Learn and Apply

LEARN

Contributions for a tax year can be made during that year and up to the tax filing deadline the following spring.

Which contribution timing is allowed for the tax year 2026?

A. Only on December 31, 2026

B. Any time through 2030

C. Only in January 2026

D. Any time from January 2026 through the April 2027 deadline

SET 59 · Retirement Accounts: IRAs, Roth IRAs, 401(k)s, and 403(b)s

Opening a Roth IRA

MAIN skill: Choose a provider and complete the steps to open a Roth IRA

Outcome FL.RETIRE.59 · National topic: Investing · NJSLS 9.1.12: PB, FI

Learning target: Describe how to open and manage a retirement account

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: What an IRA account is (5 questions)
  Why: Opening a Roth IRA requires knowing it is an account type, not an investment or a government program.
- B2 · Math link → G5-S22-M (Grade 5 5.NBT.B.7): Solve real-world problems with decimal operations
  Why: Comparing providers adds account fees and fund costs.

After 5 of 5 correct, Go Deeper unlocks (a chain):

MAIN — Choose a provider and complete the steps to open a Roth IRA

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

Roth IRAs are opened at financial institutions, such as brokerage firms, banks, credit unions, and online investment services. Each provider sets its own fees, account minimums, and investment choices, so the first step is comparing providers that offer Roth IRAs.

Jordan has earned income and wants to open a Roth IRA. Which action would be a reasonable first step?

A. Apply for a home mortgage.

B. Request an IRA directly from the Social Security Administration.

C. Compare eligible financial institutions offering Roth IRAs.

D. Apply for a credit card.

MAIN — Choose a provider and complete the steps to open a Roth IRA

Question 2 of 5 · Learn and Apply

LEARN

Many providers offer IRAs: brokerage firms (wide investment choice), banks and credit unions (often CDs and savings), and automated investment services ("robo-advisors"). Naming firms is not an endorsement.

Which type of institution commonly offers Roth IRAs with a wide choice of investments?

A. A brokerage firm such as Fidelity, Charles Schwab, or Vanguard

B. The Social Security Administration's local field office downtown

C. A credit bureau such as Experian

D. A payroll company that prints paychecks

MAIN — Choose a provider and complete the steps to open a Roth IRA

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Comparing providers means adding all yearly costs: account fees plus fund expenses (amount × expense ratio).

Provider A charges no account fee and offers index funds with 0.05% expense ratios. Provider B charges a $30 yearly account fee and offers funds with 0.60% expense ratios. For a $3,000 Roth IRA, about how much more does Provider B cost per year?

A. $1.50

B. $16.50

C. $30.00

D. $46.50

MAIN — Choose a provider and complete the steps to open a Roth IRA

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

IRA applications collect identity and tax information, like other investment accounts. Many also ask you to name beneficiaries, the people who would receive the account if you die.

Which information is generally needed to open a Roth IRA?

A. A home mortgage statement and car title

B. A credit card and its PIN

C. A list of every past purchase

D. Name, address, date of birth, Social Security number, and employment details

MAIN — Choose a provider and complete the steps to open a Roth IRA

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Choosing the correct account type matters: the tax rules attach to the account, not to the investments in it.

On a provider's website, Jordan sees choices: "Individual brokerage account," "Traditional IRA," "Roth IRA," and "529 college plan." Which should he select?

A. Individual brokerage account

B. Roth IRA

C. Traditional IRA

D. 529 college plan

BACKWARD B1 · concept review — What an IRA account is

Question 1 of 5 · Learn and Apply

LEARN

An IRA is like a container. The container has tax rules; inside it, you choose investments such as funds, stocks, or bonds.

An IRA is best described as…

A. a single investment, like one stock

B. a government payment program

C. an account type that holds investments with special tax rules

D. a loan for retirement

BACKWARD B1 · concept review — What an IRA account is

Question 2 of 5 · Learn and Apply

LEARN

IRAs are opened by individuals (or by a custodian for a minor) at financial institutions.

Who opens a Roth IRA?

A. The government, which opens one automatically at age 18

B. The individual, at a financial institution

C. Every employer, for all workers

D. A credit bureau, after a credit check

BACKWARD B1 · concept review — What an IRA account is

Question 3 of 5 · Learn and Apply

LEARN

IRAs can hold many investments: stocks, bonds, funds, CDs, and cash.

A Roth IRA can hold which of these?

A. Stock and bond index funds

B. A car title

C. A deed to the house you live in

D. A debit card

BACKWARD B1 · concept review — What an IRA account is

Question 4 of 5 · Learn and Apply

LEARN

"Roth" names a tax treatment (from the senator who proposed it), not an investment.

What does the word "Roth" tell you about an IRA?

A. That it holds only government bonds

B. That it is insured by the FDIC

C. That it pays a fixed interest rate

D. Its tax treatment: after-tax contributions, tax-free qualified withdrawals

BACKWARD B1 · concept review — What an IRA account is

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Official federal agencies, such as the IRS (irs.gov), use .gov web addresses.

Which website ending suggests an official U.S. government source for IRA rules?

A. .gov

B. .biz

C. .shop

D. .xyz

GO DEEPER 1 — Step by step: from application to first investment

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

Opening a Roth IRA follows an order: compare providers, open the account (identity checks), link a bank and fund it, then choose and buy investments, then check that everything posted correctly.

Put the Roth IRA steps in order: (1) fund the account, (2) choose an investment, (3) open the account, (4) compare providers.

A. 3, 4, 2, 1

B. 4, 3, 1, 2

C. 1, 2, 3, 4

D. 4, 2, 3, 1

GO DEEPER 1 — Step by step: from application to first investment

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Providers verify a linked bank account securely, for example with two small "micro-deposits" you confirm, or through a secure bank login service. No legitimate provider asks for a PIN.

Jordan links his checking account to his new Roth IRA. What does the provider usually do to confirm the link?

A. Asks for his debit card PIN and online banking password by email

B. Calls his employer

C. Sends small test deposits or uses secure bank verification

D. Requires a paper check mailed to the IRS

GO DEEPER 1 — Step by step: from application to first investment

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Between January 1 and the tax deadline, IRA contributions can be designated for the previous tax year or the current one.

When contributing, the form asks which tax year the contribution is for. It is March 2027. Jordan wants to count it toward 2026 and has not yet contributed for that year. Is that allowed?

A. No, contributions always count for the current calendar year

B. Only if he files for an extension

C. Only for contributions over $5,000

D. Yes, until the April 2027 tax deadline

GO DEEPER 1 — Step by step: from application to first investment

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Verifying transactions catches errors early: confirm deposits posted and purchases show the right investment and amount.

A few days after buying a fund, what should Jordan check in his account?

A. Nothing; accounts never contain errors

B. His credit score, which trades affect

C. Whether the IRS approved the trade

D. That the purchase shows the right fund, amount, and price

GO DEEPER 1 — Step by step: from application to first investment

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

A beneficiary designation tells the provider who inherits the account. It usually overrides a will for that account.

Why name a beneficiary on a Roth IRA?

A. It lets the beneficiary withdraw money from it right now

B. It doubles the contribution limit

C. It says who receives the account if the owner dies

D. It is required to buy investments

GO DEEPER 2 — Keeping the account safe and organized

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

Retirement accounts can hold large balances, so protect them with strong unique passwords and multi-factor authentication.

Which security step is MOST important for an online Roth IRA account?

A. Turning on multi-factor authentication

B. Using the same password as on social media

C. Saving the password on a shared computer

D. Sharing the login with a friend

GO DEEPER 2 — Keeping the account safe and organized

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Phishing emails imitate real companies to steal logins.

An email says, "Your IRA is locked — log in here to fix it," with a link. What should Jordan do?

A. Click the link and log in quickly

B. Go to the provider's site directly, not through the link

C. Reply with his password

D. Forward it to friends

GO DEEPER 2 — Keeping the account safe and organized

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

IRA providers report contributions on Form 5498 and distributions on Form 1099-R.

What tax form does an IRA provider send after a contribution year?

A. Form W-2

B. Form 5498, which reports IRA contributions

C. Form W-4

D. Form 1098-T

GO DEEPER 2 — Keeping the account safe and organized

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Roth contributions (not earnings) can be withdrawn any time without tax or penalty, so knowing your total contributions matters.

Jordan keeps a simple record: date, amount, and tax year of each Roth contribution. Why is this especially useful for a Roth IRA?

A. It shows how much can be withdrawn later as contributions

B. It raises his contribution limit

C. It is required to buy funds inside the IRA

D. It proves he paid tax on the earnings

GO DEEPER 2 — Keeping the account safe and organized

Question 5 of 5 · Learn and Apply

LEARN

Total fees over a period = yearly fee × number of years.

Jordan opens a Roth IRA at a provider that charges no account fee. Over 40 years, how much does avoiding a $25 yearly fee save (not counting growth)?

A. $25

B. $100

C. $1,000

D. $10,000

SET 60 · Retirement Accounts: IRAs, Roth IRAs, 401(k)s, and 403(b)s

Contributing to and investing inside an IRA

MAIN skill: Distinguish contributing from investing in an IRA and track contributions, earnings, and returns

Outcome FL.RETIRE.60 · National topic: Investing · NJSLS 9.1.12: PB, FI

Learning target: Explain how money is invested within a retirement account and how returns and losses affect it

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Depositing versus investing (5 questions)
  Why: The cash-versus-invested confusion is the most common IRA mistake; this branch isolates it.
- B2 · Math link → G6-S17-M (Grade 6 6.NS.B.3): Subtract multi-digit decimals
  Why: Earnings are the balance minus contributions.
- B3 · Math link → G7-S08-M (Grade 7 7.RP.A.3): Find a percent increase or a percent decrease
  Why: Gains and losses in an IRA are percent changes.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Investment fees inside an IRA (5 questions)
- Go Deeper 2: Watching contributions and earnings over time (5 questions)

Practical skills beyond the standards: Investing new contributions; Tracking contributions and earnings

Content status: stable

MAIN — Distinguish contributing from investing in an IRA and track contributions, earnings, and returns

Question 1 of 5 · Learn and Apply

LEARN

Contributing moves money into the IRA. The money often lands in a cash or money market position. Investing is a separate step: choosing and buying funds or other investments.

Taylor contributed $500 to a Roth IRA, but the money remains in the account's cash position. What has Taylor not necessarily done yet?

A. Opened the IRA.

B. Made a contribution.

C. Purchased an investment.

D. Transferred money into the account.

MAIN — Distinguish contributing from investing in an IRA and track contributions, earnings, and returns

Question 2 of 5 · Learn and Apply

LEARN

Common IRA investments include index funds and target-date funds. A target-date fund holds a diversified mix of stock and bond funds and becomes more conservative as its target year approaches.

Taylor wants one broadly diversified investment for a retirement 45 years away. Which choice fits?

A. All of it in a single small company's stock

B. A savings account inside the IRA, forever

C. A short-term CD that is renewed every month for decades

D. A low-cost target-date fund near the year she turns 65

MAIN — Distinguish contributing from investing in an IRA and track contributions, earnings, and returns

Question 3 of 5 · Learn and Apply

LEARN

In an IRA, contributions are the money you put in; earnings are the growth (dividends, interest, and gains). Balance = contributions + earnings.

Over several years, Ana contributed $6,000 to her Roth IRA. It is now worth $7,800. How much are earnings?

A. $1,800

B. $6,000

C. $7,800

D. $13,800

MAIN — Distinguish contributing from investing in an IRA and track contributions, earnings, and returns

Question 4 of 5 · Learn and Apply

LEARN

Investments in an IRA can rise or fall. A loss lowers the balance but does not change how much you contributed.

Ana's $7,800 Roth IRA falls 10% in a market drop. What is it worth, and what are her total contributions?

A. $7,020; contributions fall to $5,400 too

B. $7,800; IRAs cannot lose value

C. $6,000; the loss erases all earnings

D. $7,020; contributions are still $6,000

MAIN — Distinguish contributing from investing in an IRA and track contributions, earnings, and returns

Question 5 of 5 · Knowledge Check

Why does compounding work especially well in a Roth IRA?

A. Earnings grow without yearly taxes and qualified withdrawals are tax-free

B. The IRS adds 7% every year

C. Roth IRAs cannot go down in value

D. The provider pays a guaranteed bonus rate

BACKWARD B1 · concept review — Depositing versus investing

Question 1 of 5 · Learn and Apply

LEARN

Uninvested cash in an IRA typically sits in a money market fund or bank sweep that pays a modest rate.

Money that is contributed to an IRA but not invested usually earns...

A. the stock market's return

B. a guaranteed 10%

C. only the low rate of the cash or money market position

D. nothing ever, and it is lost after a year

BACKWARD B1 · concept review — Depositing versus investing

Question 2 of 5 · Learn and Apply

LEARN

Buying requires an order, just like in a regular brokerage account.

Which step actually BUYS an investment in an IRA?

A. Transferring money from checking

B. Placing an order to buy a fund

C. Opening the account

D. Naming a beneficiary

BACKWARD B1 · concept review — Depositing versus investing

Question 3 of 5 · Knowledge Check

Ben contributes $1,000 and buys $900 of an index fund. How much cash remains in the IRA?

A. $100

B. $900

C. $1,000

D. $1,900

BACKWARD B1 · concept review — Depositing versus investing

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Automatic investing directs each contribution into chosen funds so money does not sit in cash.

Some IRAs let you set "automatic investing" for new contributions. What does it do?

A. Withdraws money automatically

B. Raises the contribution limit

C. Moves money to checking

D. Buys chosen funds automatically when money arrives

BACKWARD B1 · concept review — Depositing versus investing

Question 5 of 5 · Knowledge Check

What is a common, costly IRA mistake?

A. Contributing for years but never investing the cash

B. Choosing a low-cost index fund

C. Checking the account balance occasionally on her phone

D. Naming a beneficiary

GO DEEPER 1 — Investment fees inside an IRA

Question 1 of 5 · Learn and Apply

LEARN

Expense ratios apply inside IRAs just as in taxable accounts: yearly cost = balance × expense ratio.

Taylor's target-date fund has a 0.12% expense ratio. On a $10,000 balance, what is the yearly cost?

A. $1.20

B. $12

C. $120

D. $1,200

GO DEEPER 1 — Investment fees inside an IRA

Question 2 of 5 · Learn and Apply

LEARN

Compare fees in dollars: difference in expense ratios × balance.

Another target-date fund charges 0.75%. How much more per year does it cost on $10,000 than a 0.12% fund?

A. $12

B. $63

C. $75

D. $630

GO DEEPER 1 — Investment fees inside an IRA

Question 3 of 5 · Knowledge Check

Which choice lowers costs inside an IRA the MOST over decades?

A. Trading frequently

B. Choosing funds with sales loads

C. Selecting low-expense funds

D. Paying for add-on services you do not use

GO DEEPER 1 — Investment fees inside an IRA

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Providers list each fund's expense ratio on its detail page and in the prospectus.

Where in the IRA provider's website can Taylor find a fund's expense ratio?

A. Her bank's monthly statement

B. The fund's details page or prospectus

C. Her Form 1099-R

D. The IRS website

GO DEEPER 1 — Investment fees inside an IRA

Question 5 of 5 · Knowledge Check

Do fees in a Roth IRA reduce tax-free growth?

A. No; fees in IRAs are refunded

B. No; fees are taken only from contributions, not growth

C. Only if the fund loses money

D. Yes; every fee dollar is a dollar that cannot grow tax-free

GO DEEPER 2 — Watching contributions and earnings over time

Question 1 of 5 · Learn and Apply

LEARN

Earnings = current value − total contributions.

Taylor contributes $3,000 a year for 3 years. The account is worth $10,500. What are her earnings?

A. $1,500

B. $4,500

C. $9,000

D. $10,500

GO DEEPER 2 — Watching contributions and earnings over time

Question 2 of 5 · Learn and Apply

LEARN

Return = change in value ÷ starting value × 100.

Taylor's account rises from $10,500 to $11,340 in a year with no new contributions. What was the return?

A. 7.4%

B. 8%

C. 108%

D. $840

GO DEEPER 2 — Watching contributions and earnings over time

Question 3 of 5 · Learn and Apply

LEARN

Roth IRA contributions can be withdrawn at any time without tax or penalty; earnings follow stricter rules.

Which number determines how much Taylor can withdraw from her Roth IRA anytime without tax or penalty?

A. Her total contributions

B. Her total earnings

C. Her current balance today

D. Her yearly return

GO DEEPER 2 — Watching contributions and earnings over time

Question 4 of 5 · Learn and Apply

LEARN

Market drops are normal over long periods. Panic selling can lock in losses.

After a 20% market drop, Taylor's $11,340 Roth IRA is worth about $9,072. What should a long-term investor usually avoid doing?

A. Continuing regular contributions

B. Keeping a diversified fund

C. Selling everything out of fear

D. Rebalancing to a target mix

GO DEEPER 2 — Watching contributions and earnings over time

Question 5 of 5 · Learn and Apply

LEARN

Buying and selling within an IRA does not create current taxes.

Taylor sells one fund and buys another inside her Roth IRA. Does she owe tax on the sale this year?

A. Yes; every sale is taxed

B. No; trades inside an IRA are not taxed when made

C. Yes, at 10%

D. Only if she made a profit

SET 61 · Retirement Accounts: IRAs, Roth IRAs, 401(k)s, and 403(b)s

Roth IRA withdrawals and qualified distributions

MAIN skill: Apply the rules for withdrawing Roth IRA contributions and earnings

Outcome FL.RETIRE.61 · National topic: Investing · NJSLS 9.1.12: PB, EG

Learning target: Explain withdrawal rules and tax treatment of retirement accounts

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Contributions versus earnings (5 questions)
  Why: Withdrawal rules treat contributions and earnings differently; students must separate them first.
- B2 · Math link → G6-S17-M (Grade 6 6.NS.B.3): Subtract multi-digit decimals
  Why: Separating contributions from earnings subtracts amounts.
- B3 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Taxes and the additional tax are percents of a withdrawal.

- Go Deeper 1: Traditional IRA withdrawals (5 questions)
- Go Deeper 2: Common Roth IRA mistakes and misconceptions (5 questions)

Practical skills beyond the standards: Applying Roth ordering rules

Content status: time-sensitive

Source: IRS (Publication 590-B) — Roth IRA contributions can be withdrawn at any time; qualified distributions require a 5-year period and age 59½ (or death, disability, or first-time home purchase up to $10,000); nonqualified earnings may be taxed plus a 10% additional tax. https://www.irs.gov/publications/p590b

MAIN — Apply the rules for withdrawing Roth IRA contributions and earnings

Question 1 of 5 · Learn and Apply

LEARN

Roth IRA withdrawals come out in a set order: contributions first, then earnings. Because contributions were made with after-tax money, they can be withdrawn at any time, at any age, without tax or penalty.

Mia, 30, contributed $8,000 to her Roth IRA over several years. It is worth $11,000. She withdraws $5,000. Under the ordering rules, what is taxed or penalized?

A. All $5,000, at income tax plus 10%

B. Nothing; the $5,000 comes from contributions

C. $3,000 of earnings

D. Only the 10% additional tax, which would be $500

MAIN — Apply the rules for withdrawing Roth IRA contributions and earnings

Question 2 of 5 · Learn and Apply

LEARN

Earnings withdrawn before a "qualified distribution" are generally taxable as income, and before age 59½ they usually also face a 10% additional tax, unless an exception applies.

Mia later withdraws $2,000 of EARNINGS at age 32, and no exception applies. Assume her tax rate is 12%. How much tax and additional tax is due?

A. $0

B. $200

C. $240

D. $440

MAIN — Apply the rules for withdrawing Roth IRA contributions and earnings

Question 3 of 5 · Learn and Apply

LEARN

A qualified Roth distribution meets two tests: the 5-year rule (5 tax years since your first Roth IRA contribution) and a qualifying event: age 59½, disability, death, or a first-time home purchase (up to $10,000 lifetime).

Which conditions make a Roth IRA distribution QUALIFIED (tax-free, including earnings)?

A. Any withdrawal after the account is one year old

B. Any withdrawal after age 50

C. Five years since the first Roth contribution AND age 59½ (or another qualifying event)

D. Any withdrawal at all, because Roth means tax-free

MAIN — Apply the rules for withdrawing Roth IRA contributions and earnings

Question 4 of 5 · Learn and Apply

LEARN

The 5-year clock starts January 1 of the tax year of the first Roth IRA contribution.

Leo opens his first Roth IRA at age 58 with a contribution for tax year 2026. At what point does he first meet BOTH tests for qualified distributions?

A. At 59½, in 2027

B. Immediately, because he is already over age 55 and retired

C. Never, because he started after 50

D. In 2031, when 5 years have passed and he is over 59½

MAIN — Apply the rules for withdrawing Roth IRA contributions and earnings

Question 5 of 5 · Knowledge Check

Which statement about Roth IRAs is a MISCONCEPTION?

A. Money in a Roth IRA can never be touched before retirement

B. Contributions can be withdrawn at any time without tax or penalty

C. Qualified distributions are tax-free

D. Investments inside can lose value

BACKWARD B1 · concept review — Contributions versus earnings

Question 1 of 5 · Learn and Apply

LEARN

Balance = contributions + earnings.

A Roth IRA has $4,000 of contributions and $1,000 of earnings. What is the balance?

A. $1,000

B. $3,000

C. $4,000

D. $5,000

BACKWARD B1 · concept review — Contributions versus earnings

Question 2 of 5 · Learn and Apply

LEARN

Earnings = balance − contributions.

A Roth IRA balance is $9,000, and $7,000 was contributed. What are the earnings?

A. $2,000

B. $7,000

C. $9,000

D. $16,000

BACKWARD B1 · concept review — Contributions versus earnings

Question 3 of 5 · Learn and Apply

LEARN

Roth contributions come from income that was already taxed.

Which part of a Roth IRA was already taxed before going in?

A. The contributions

B. The earnings

C. Neither part

D. Only the dividends

BACKWARD B1 · concept review — Contributions versus earnings

Question 4 of 5 · Learn and Apply

LEARN

Roth IRA withdrawals are treated as coming from contributions first, then earnings.

Ana's Roth IRA holds $4,000 of contributions and $1,000 of earnings. At age 30 she withdraws $3,000. How is the withdrawal treated?

A. As $3,000 of earnings

B. As $2,400 of contributions and $600 of earnings

C. As $3,000 of contributions

D. As $1,000 of earnings, then $2,000 of contributions

BACKWARD B1 · concept review — Contributions versus earnings

Question 5 of 5 · Learn and Apply

LEARN

The additional tax on early withdrawals is 10% of the taxable amount.

What is 10% of $3,000?

A. $30

B. $300

C. $2,700

D. $3,000

GO DEEPER 1 — Traditional IRA withdrawals

Question 1 of 5 · Learn and Apply

LEARN

Traditional IRA withdrawals are generally taxed as ordinary income (deductible contributions were never taxed). Before 59½, a 10% additional tax usually applies too, unless an exception applies.

Raj, 45, withdraws $5,000 from a traditional IRA with no exception. Assume a 22% tax rate. How much tax and additional tax is due?

A. $0

B. $500

C. $1,100

D. $1,600

GO DEEPER 1 — Traditional IRA withdrawals

Question 2 of 5 · Learn and Apply

LEARN

After 59½, the 10% additional tax no longer applies, but traditional IRA withdrawals are still taxed as income.

At age 66, Raj withdraws $5,000 from his traditional IRA. Assume a 12% tax rate. What is owed?

A. $1,100

B. $600 of income tax

C. $0

D. $500

GO DEEPER 1 — Traditional IRA withdrawals

Question 3 of 5 · Learn and Apply

LEARN

Required minimum distributions (RMDs) are yearly withdrawals the IRS requires so that tax-deferred money is eventually taxed. They start in an owner's 70s, depending on birth year. Money taxed before it went in is treated differently.

Which IRA type requires minimum withdrawals starting in the owner's 70s?

A. Roth IRA (for the original owner)

B. Neither type

C. Both, starting at age 50

D. Traditional IRA

GO DEEPER 1 — Traditional IRA withdrawals

Question 4 of 5 · Learn and Apply

LEARN

The first-time homebuyer exception lets up to $10,000 of Roth IRA earnings over a lifetime be a qualified distribution, if the 5-year rule is met.

Leo used $4,000 of the first-time homebuyer exception years ago. He again qualifies as a first-time buyer, his Roth IRA meets the 5-year rule, and he wants $15,000 of earnings. How much more can qualify under this exception?

A. $0

B. $6,000

C. $10,000

D. $15,000

GO DEEPER 1 — Traditional IRA withdrawals

Question 5 of 5 · Knowledge Check

Why are early IRA withdrawals generally discouraged?

A. They are illegal

B. They can trigger taxes and shrink long-term retirement growth

C. They raise contribution limits

D. They lower future contribution limits permanently

GO DEEPER 2 — Common Roth IRA mistakes and misconceptions

Question 1 of 5 · Learn and Apply

LEARN

Many mistakes come from misunderstanding what a Roth IRA is: it is an account with tax rules, not an investment itself.

Which statement about what a Roth IRA is reflects a MISCONCEPTION?

A. "A Roth IRA is an account that holds investments."

B. "A Roth IRA needs earned income to contribute."

C. "Roth IRA investments can lose value."

D. "A Roth IRA is an investment, like a stock."

GO DEEPER 2 — Common Roth IRA mistakes and misconceptions

Question 2 of 5 · Learn and Apply

LEARN

Roth and traditional IRAs differ in when tax is paid.

Which statement about Roth IRA taxes is a MISCONCEPTION?

A. "Roth contributions are made with after-tax money."

B. "Qualified withdrawals are tax-free."

C. "Roth contributions are tax-deductible."

D. "There are income limits for direct contributions."

GO DEEPER 2 — Common Roth IRA mistakes and misconceptions

Question 3 of 5 · Learn and Apply

LEARN

IRA contributions cannot exceed earned income for the year.

Sam contributed $6,000 to a Roth IRA this year but earned only $2,500. What mistake occurred?

A. He contributed more than his earned income

B. None; contributions are not limited by income

C. He should have contributed more to reach the full limit

D. He contributed in the wrong tax year

GO DEEPER 2 — Common Roth IRA mistakes and misconceptions

Question 4 of 5 · Knowledge Check

Which mistake costs Roth IRA owners the most growth over decades?

A. Choosing a low-cost, diversified index fund

B. Leaving contributions in cash for years

C. Naming a beneficiary

D. Contributing regularly

GO DEEPER 2 — Common Roth IRA mistakes and misconceptions

Question 5 of 5 · Knowledge Check

A friend says, "You can't open a Roth IRA as a teenager." What is the accurate reply?

A. That is true until age 21

B. Teens can open one only through an employer

C. Only the government can open one for a teen

D. Teens with earned income can, often through a custodial Roth IRA

SET 62 · Retirement Accounts: IRAs, Roth IRAs, 401(k)s, and 403(b)s

Social Security and retirement income

MAIN skill: Explain how Social Security works and how claiming age changes benefits

Outcome FL.RETIRE.62 · National topic: Earning Income · NJSLS 9.1.12: EG, PB

Learning target: Explain Social Security and how payroll taxes fund benefits; retirement income planning

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Payroll taxes fund benefits (5 questions)
  Why: Social Security makes sense once students connect FICA on their pay stub to future benefits.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100

Practical skills beyond the standards: Checking a Social Security earnings record

Content status: time-sensitive

Source: Social Security Administration — Full retirement age is 67 for people born in 1960 or later; claiming at 62 reduces the benefit by about 30%; delaying past full retirement age raises it 8% a year until 70; workers need 40 credits (up to 4 per year). https://www.ssa.gov/benefits/retirement/planner/agereduction.html

MAIN — Explain how Social Security works and how claiming age changes benefits

Question 1 of 5 · Learn and Apply

LEARN

Social Security is a federal program that pays retirement, disability, and survivor benefits. It is funded mainly by payroll taxes: workers pay 6.2% of wages (up to a yearly limit), and employers pay a matching 6.2%.

How is Social Security mainly paid for?

A. Voluntary donations from retirees

B. Profits the government earns from the stock market

C. Payroll taxes on workers' wages and employers

D. Federal income tax on all income

MAIN — Explain how Social Security works and how claiming age changes benefits

Question 2 of 5 · Learn and Apply

LEARN

Credits are earned by working and paying Social Security taxes. You can earn at most 4 credits per year, and you generally need 40 credits for retirement benefits.

Workers earn up to 4 Social Security credits per year and generally need 40 credits to qualify for retirement benefits. What is the fewest years of work needed?

A. 10 years

B. 40 years

C. 4 years

D. 20 years

MAIN — Explain how Social Security works and how claiming age changes benefits

Question 3 of 5 · Learn and Apply

LEARN

Full retirement age is 67 for people born in 1960 or later. You can claim as early as 62, but the monthly benefit is permanently reduced (about 30% at 62). Waiting past full retirement age raises it.

Tia's full retirement age is 67, when her benefit would be $1,800 a month. Claiming at 62 reduces it by 30%. What would she receive at 62?

A. $540

B. $1,260

C. $1,800

D. $2,340

MAIN — Explain how Social Security works and how claiming age changes benefits

Question 4 of 5 · Learn and Apply

LEARN

Delayed retirement credits increase the benefit by 8% per year (for those born 1943 or later) until age 70.

If Tia delays claiming until 70, her benefit rises 8% for each year after 67. What would $1,800 become?

A. $1,800

B. $1,944

C. $2,232

D. $2,340

MAIN — Explain how Social Security works and how claiming age changes benefits
Question 5 of 5 · Knowledge Check

For an average worker, Social Security replaces about what share of pre-retirement earnings?

A. About 100%

B. About 40%

C. About 90%

D. About 5%

BACKWARD B1 · concept review — Payroll taxes fund benefits

Question 1 of 5 · Learn and Apply

LEARN

The Social Security line on a pay stub (sometimes labeled OASDI) is the worker's 6.2% share that funds the program.

On a pay stub, which line pays for Social Security?

A. State income tax

B. Health insurance premium deduction

C. Social Security (OASDI) tax

D. 401(k) contribution

BACKWARD B1 · concept review — Payroll taxes fund benefits

Question 2 of 5 · Learn and Apply

LEARN

Employee Social Security tax = wages × 6.2%.

A worker earns $2,000. What is the employee Social Security tax at 6.2%?

A. $12.40

B. $124

C. $248

D. $1,240

BACKWARD B1 · concept review — Payroll taxes fund benefits

Question 3 of 5 · Learn and Apply

LEARN

Employers match the employee's 6.2% Social Security tax.

A worker earns $2,000, and 6.2% Social Security tax is withheld. How much does the employer pay in Social Security tax on that $2,000?

A. $0

B. $62

C. $124

D. $248

BACKWARD B1 · concept review — Payroll taxes fund benefits

Question 4 of 5 · Learn and Apply

LEARN

Social Security pays retirement, disability, and survivor benefits.

Which benefit does Social Security NOT usually provide?

A. Retirement benefits

B. Disability benefits

C. Survivor benefits

D. Payment of everyday bills for workers under 62 with no disability

BACKWARD B1 · concept review — Payroll taxes fund benefits

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

The SSA keeps a record of your earnings. Checking it helps catch errors that could lower future benefits.

Where can a worker see the earnings Social Security has on record for them?

A. In a "my Social Security" account at ssa.gov

B. On a credit report

C. On a bank statement

D. On Form W-4

GO DEEPER 1 — Pensions and other retirement income

Question 1 of 5 · Learn and Apply

LEARN

A defined-benefit (DB) pension promises a set payment based on a formula, and the employer bears the investment risk. A defined-contribution (DC) plan, such as a 401(k), depends on what is contributed and how investments perform; the worker bears the risk.

What is a defined-benefit pension?

A. A personal savings account that you invest yourself

B. A government benefit every worker gets

C. An annuity you buy with your own savings

D. A plan that promises a set monthly payment in retirement, often based on salary and years worked

GO DEEPER 1 — Pensions and other retirement income

Question 2 of 5 · Learn and Apply

LEARN

A pension formula multiplies a percent per year of service by years worked and by salary.

A pension pays 1.5% of final salary for each year worked. Ana worked 30 years with a final salary of $60,000. What is her yearly pension?

A. $900

B. $18,000

C. $27,000

D. $45,000

GO DEEPER 1 — Pensions and other retirement income

Question 3 of 5 · Learn and Apply

LEARN

In defined-contribution plans like 401(k)s, the account value depends on contributions and investment results.

Who bears the investment risk in a 401(k)?

A. The employer

B. The worker

C. The government

D. The stock exchange

GO DEEPER 1 — Pensions and other retirement income

Question 4 of 5 · Learn and Apply

LEARN

Retirement income often comes from several sources; savings fill the remaining gap.

Ana expects $27,000 from her pension and $20,000 from Social Security. She wants $55,000 a year. How much must come from savings?

A. $8,000

B. $28,000

C. $47,000

D. $55,000

GO DEEPER 1 — Pensions and other retirement income

Question 5 of 5 · Learn and Apply

LEARN

Many public employees participate in state or local pension systems; whether they also pay into Social Security varies by state and employer.

Why are many public school teachers in some states covered by pensions instead of, or in addition to, Social Security?

A. Some state and local employers run their own retirement systems

B. Teachers are banned from saving

C. Pensions are required for all workers nationwide by federal law

D. Social Security pays only private workers

GO DEEPER 2 — Choosing when to claim Social Security

Question 1 of 5 · Learn and Apply

LEARN

Claiming early gives smaller payments for more months; claiming later gives larger payments for fewer months.

Tia can get $1,260 a month at 62 or $1,800 at 67. Ignoring growth and taxes, how much would she receive from 62 to 67 by claiming early?

A. $6,300

B. $15,120

C. $75,600

D. $108,000

GO DEEPER 2 — Choosing when to claim Social Security

Question 2 of 5 · Learn and Apply

LEARN

A "break-even" age compares the head start from claiming early with the larger later payments: months = head start ÷ monthly difference.

After 67, claiming at 67 instead of 62 pays $540 more per month. How many months of the larger payment make up the $75,600 head start (nearest whole month)?

A. 60 months

B. 14 months

C. 140 months

D. 120 months

GO DEEPER 2 — Choosing when to claim Social Security

Question 3 of 5 · Learn and Apply

LEARN

The best claiming age depends on health, life expectancy, other income, and family situation.

Which factor would most support DELAYING Social Security?

A. Needing the money immediately with no other income

B. Expecting a short life span due to illness

C. Expecting a long life and having other income until then

D. Wanting the smallest possible monthly benefit for the rest of life

GO DEEPER 2 — Choosing when to claim Social Security

Question 4 of 5 · Learn and Apply

LEARN

COLAs adjust benefits based on inflation.

Social Security benefits get a cost-of-living adjustment (COLA) most years. Why?

A. To reward people who claimed their benefits early

B. To lower benefits each year

C. To match the stock market's return

D. To help benefits keep up with inflation

GO DEEPER 2 — Choosing when to claim Social Security

Question 5 of 5 · Knowledge Check

Which statement about Social Security planning is MOST accurate?

A. Check your SSA estimate and plan savings to fill the gap

B. Social Security alone covers most retirees' full budgets

C. Social Security will pay nothing to today's teens

D. Benefits are the same for everyone

SET 63 · Taxes and Tax Filing

Types of taxes and how they work

MAIN skill: Identify major taxes and classify taxes as progressive, regressive, or proportional

Outcome FL.TAX.63 · National topic: Earning Income · NJSLS 9.1.12: EG

Learning target: 12-8b compare tax rates on different types of income; types of taxes and their purposes

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: What taxes pay for (5 questions)
  - Why: Classifying taxes is easier once students connect taxes to the public services they fund.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  - Why: Taxes are percents of a price, income, or value.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: State and local taxes in New Jersey (5 questions)
- Go Deeper 2: Who bears a tax, and fairness debates (5 questions)

Practical skills beyond the standards: New Jersey state and sales tax basics

Content status: time-sensitive

Source: New Jersey Division of Taxation — New Jersey has a state income tax (Form NJ-1040) with graduated rates; New Jersey does not tax most clothing and grocery food under the sales tax. https://www.nj.gov/treasury/taxation/njit25.shtml

MAIN — Identify major taxes and classify taxes as progressive, regressive, or proportional

Question 1 of 5 · Learn and Apply

LEARN

Governments collect several kinds of taxes: income taxes on earnings (federal and most states), payroll taxes for Social Security and Medicare, sales taxes on purchases (state and local), property taxes on real estate (local), and excise taxes on specific goods such as gasoline.

Which tax is charged when you buy a taxable item at a store?

A. Income tax on wages

B. Sales tax

C. Property tax on a home

D. Payroll tax for Social Security

MAIN — Identify major taxes and classify taxes as progressive, regressive, or proportional

Question 2 of 5 · Learn and Apply

LEARN

A progressive tax takes a larger percentage from higher incomes (the federal income tax). A proportional ("flat") tax takes the same percentage from everyone. A regressive tax takes a larger percentage of income from lower incomes, for example a sales tax on necessities.

Under a PROGRESSIVE tax, what happens as income rises?

A. The same percentage is paid at every income level

B. A smaller percentage is paid in tax

C. A larger percentage of income is paid in tax

D. Everyone pays the same dollar amount

MAIN — Identify major taxes and classify taxes as progressive, regressive, or proportional

Question 3 of 5 · Learn and Apply

LEARN

To see whether a tax is regressive, compare the tax paid with each person's income.

Two people each buy $500 of taxable goods with a 6% sales tax. One earns $25,000 a year; the other earns $250,000. What percent of income does each pay in this tax?

A. 6% vs 6%

B. $30 vs $300

C. 0.012% vs 0.12%

D. 0.12% vs 0.012%

MAIN — Identify major taxes and classify taxes as progressive, regressive, or proportional

Question 4 of 5 · Learn and Apply

LEARN

Property taxes fund local services such as schools, police, and roads. Yearly tax = assessed value × tax rate.

A town's property tax rate is 1.2% of a home's assessed value. What is the yearly tax on a home assessed at $350,000?

A. $420

B. $1,200

C. $4,200

D. $42,000

MAIN — Identify major taxes and classify taxes as progressive, regressive, or proportional

Question 5 of 5 · Knowledge Check

Which tax pays for Social Security and Medicare?

A. Payroll taxes (FICA)

B. Sales tax

C. Property tax

D. Excise tax on gasoline

BACKWARD B1 · concept review — What taxes pay for

Question 1 of 5 · Learn and Apply

LEARN

Taxes pay for public goods and services: schools, roads, police and fire departments, national defense, and programs such as Social Security and Medicare.

Which public service is commonly paid for with local property taxes?

A. A private gym membership

B. Public schools

C. A streaming service

D. A personal phone plan

BACKWARD B1 · concept review — What taxes pay for

Question 2 of 5 · Knowledge Check

Why do governments collect taxes?

A. To make individual government officials rich

B. To lower everyone's income

C. To pay for public services and programs

D. To pay for private purchases

BACKWARD B1 · concept review — What taxes pay for

Question 3 of 5 · Learn and Apply

LEARN

There is no general federal sales tax; most states and some localities charge sales taxes.

Which government level usually collects sales tax?

A. Only the federal government

B. State and sometimes local governments

C. Private companies, for their own use only

D. Schools directly

BACKWARD B1 · concept review — What taxes pay for

Question 4 of 5 · Learn and Apply

LEARN

Excise taxes apply to particular products, often included in the price.

An excise tax is charged on…

A. all wages

B. the value of a house

C. every bank deposit

D. specific goods, such as gasoline or tobacco

BACKWARD B1 · concept review — What taxes pay for

Question 5 of 5 · Learn and Apply

LEARN

Tax at a rate = amount × rate.

What is 6% of $40?

A. $0.24

B. $2.40

C. $24.00

D. $42.40

GO DEEPER 1 — State and local taxes in New Jersey

Question 1 of 5 · Learn and Apply

LEARN

Most states, including New Jersey, have their own income tax and their own return, filed in addition to the federal Form 1040. State return forms usually carry the state's abbreviation in their name.

New Jersey has a state income tax. Which form do New Jersey residents use to file it?

A. Form NJ-1040

B. Form W-4

C. Form 1099-NEC

D. Form W-2

GO DEEPER 1 — State and local taxes in New Jersey

Question 2 of 5 · Learn and Apply

LEARN

New Jersey exempts most clothing and footwear and most grocery food from its 6.625% sales tax.

In New Jersey, which purchase is generally EXEMPT from sales tax?

A. A laptop computer

B. A video game console

C. A desk lamp

D. A pair of jeans

GO DEEPER 1 — State and local taxes in New Jersey

Question 3 of 5 · Learn and Apply

LEARN

New Jersey's general sales tax rate is 6.625%.

A New Jersey shopper buys a $120 taxable tablet. At 6.625%, what is the sales tax (nearest cent)?

A. $7.20

B. $7.95

C. $79.50

D. $127.95

GO DEEPER 1 — State and local taxes in New Jersey

Question 4 of 5 · Learn and Apply

LEARN

States choose different mixes of taxes.

Some states have NO state income tax. How do such states usually raise money instead?

A. They print money

B. Through higher sales, property, or other taxes

C. They have no services

D. They borrow money from other states to make up the gap

GO DEEPER 1 — State and local taxes in New Jersey

Question 5 of 5 · Knowledge Check

Why should a student moving to another state check its tax rules?

A. Federal taxes change by state

B. Taxes are the same everywhere

C. Income, sales, and property taxes differ by state

D. Students never pay state taxes

GO DEEPER 2 — Who bears a tax, and fairness debates

Question 1 of 5 · Learn and Apply

LEARN

Three patterns: a progressive tax takes a larger share of income as income rises; a regressive tax takes a larger share from lower incomes; a proportional tax takes the same share from everyone.

A flat tax of 10% on all income is an example of which kind of tax?

A. Proportional

B. Progressive tax

C. Regressive

D. Excise

GO DEEPER 2 — Who bears a tax, and fairness debates

Question 2 of 5 · Learn and Apply

LEARN

Under a flat tax, tax = income × the same rate for everyone.

Under a 10% flat tax, how much does someone earning $30,000 pay, and someone earning $300,000?

A. $3,000 and $3,000

B. $3,000 and $30,000

C. $30,000 and $3,000

D. $300 and $3,000

GO DEEPER 2 — Who bears a tax, and fairness debates

Question 3 of 5 · Learn and Apply

LEARN

When lower-income households spend more of their income on taxed items, the tax takes a larger share of their income.

Why are taxes on necessities often called regressive?

A. Necessities are taxed at higher rates

B. Necessities are taxed only for low-income buyers

C. Necessities are never taxed

D. Lower-income households spend a larger share of income on necessities

GO DEEPER 2 — Who bears a tax, and fairness debates

Question 4 of 5 · Knowledge Check

Which tax is MOST visible to young workers on every paycheck?

A. Estate taxes

B. Corporate income taxes

C. Payroll (FICA) taxes and income tax withholding

D. Import tariffs

GO DEEPER 2 — Who bears a tax, and fairness debates

Question 5 of 5 · Learn and Apply

LEARN

When buyers have few alternatives, more of a tax is passed on to them in prices.

Economists say a gasoline excise tax is partly paid by consumers through higher prices. Why might drivers keep buying gas anyway?

A. Many need it to get to work, so demand changes little

B. Gas stations must absorb the whole tax by law

C. The tax is refunded at the pump

D. Drivers do not notice prices

SET 64 · Taxes and Tax Filing

Tax forms: W-2, 1099s, and Form 1040

MAIN skill: Identify the tax forms workers receive and file

Outcome FL.TAX.64 · National topic: Earning Income · NJSLS 9.1.12: EG

Learning target: Identify tax forms associated with earning income and filing a tax return

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Information forms versus the tax return (5 questions)
  Why: Students must see W-2s and 1099s as inputs to the 1040, not separate bills.
- B2 · Math link → G6-S16-M (Grade 6 6.NS.B.3): Add multi-digit decimals
  Why: Totaling income from several forms adds amounts.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Reading a W-2 box by box (5 questions)
- Go Deeper 2: Other common tax forms (5 questions)

Practical skills beyond the standards: Reading a W-2 box by box

Content status: time-sensitive

Source: IRS — Form 1040 is the individual income tax return; employers issue Form W-2; payers issue Forms 1099 for other income. https://www.irs.gov/forms-instructions

MAIN — Identify the tax forms workers receive and file

Question 1 of 5 · Learn and Apply

LEARN

At tax time, you gather forms that report your income: Form W-2 from each employer (wages and taxes withheld); Forms 1099 from others, such as 1099-NEC for contract work, 1099-INT for interest, and 1099-DIV for dividends. You then file Form 1040, the federal individual income tax return.

Kayla had a part-time job at a store. Which form will her employer send showing her wages and taxes withheld for the year?

A. Form 1099-NEC

B. Form W-2

C. Form W-4

D. Form 1040

MAIN — Identify the tax forms workers receive and file

Question 2 of 5 · Learn and Apply

LEARN

Businesses may report payments to independent contractors on Form 1099-NEC (nonemployee compensation).

Ravi did freelance graphic design for a business. Which form might the business send him?

A. Form 1099-NEC

B. Form W-2

C. Form W-4

D. Form 1098-T (tuition)

MAIN — Identify the tax forms workers receive and file

Question 3 of 5 · Knowledge Check

Which form is the federal individual income tax return itself?

A. Form W-2

B. Form 1099-INT

C. Form 1040

D. Form W-4

MAIN — Identify the tax forms workers receive and file

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Form W-2 boxes: Box 1 shows taxable wages; Box 2 shows federal income tax withheld; other boxes show Social Security and Medicare wages and taxes, and state amounts.

Kayla's W-2 shows Box 1 wages of $8,400 and Box 2 federal income tax withheld of $310. What does the $310 represent?

A. Her total tax bill for the year, which she must pay again

B. Social Security tax only

C. A refund already sent to her

D. Federal income tax already paid through withholding

MAIN — Identify the tax forms workers receive and file

Question 5 of 5 · Knowledge Check

Kayla earned $45 of interest from her savings account. Which form reports it?

A. Form 1099-INT

B. Form 1099-DIV

C. Form W-2

D. Form 1099-NEC

BACKWARD B1 · concept review — Information forms versus the tax return

Question 1 of 5 · Learn and Apply

LEARN

Information forms report income to you and the IRS. You use them to complete your return.

What does an "information form" like a W-2 do?

A. It is a bill that must be paid by April

B. It reports income and amounts withheld

C. It is a refund check

D. It sets next year's salary

BACKWARD B1 · concept review — Information forms versus the tax return

Question 2 of 5 · Learn and Apply

LEARN

Each person (or married couple) files their own Form 1040.

Who files Form 1040?

A. The employer

B. The bank

C. The taxpayer

D. The school

BACKWARD B1 · concept review — Information forms versus the tax return

Question 3 of 5 · Learn and Apply

LEARN

Every W-2 and 1099 reports income that belongs on the return.

Kayla has two W-2s from two jobs. How many should she use when filing?

A. Only the larger one

B. Neither

C. Only the first one received

D. Both

BACKWARD B1 · concept review — Information forms versus the tax return

Question 4 of 5 · Knowledge Check

Wages of $3,200 and $5,200 from two W-2s total how much?

A. $2,000

B. $5,200

C. $8,400

D. $16,640,000

BACKWARD B1 · concept review — Information forms versus the tax return

Question 5 of 5 · Knowledge Check

When should most workers expect to receive their W-2s?

A. In July

B. With every paycheck

C. By early February (employers must send them by January 31)

D. Only if they ask

GO DEEPER 1 — Reading a W-2 box by box

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

Box 1 shows wages subject to federal income tax. Box 3 shows wages subject to Social Security tax. Traditional 401(k) contributions lower Box 1 but not Box 3.

A W-2 shows Box 1 wages $28,500 and Box 3 Social Security wages $30,000. Why might Box 1 be lower?

A. Pre-tax 401(k) contributions reduce Box 1 but not Box 3

B. The employer made an error

C. Box 3 includes her tips only

D. Box 1 is always half of Box 3

GO DEEPER 1 — Reading a W-2 box by box

Question 2 of 5 · Learn and Apply

LEARN

Box 4 shows the Social Security tax withheld: Box 3 wages × 6.2%.

Box 3 Social Security wages are $30,000. What should Box 4 (Social Security tax withheld at 6.2%) show?

A. $186

B. $435

C. $1,860

D. $4,590

GO DEEPER 1 — Reading a W-2 box by box

Question 3 of 5 · Learn and Apply

LEARN

Box 6 shows Medicare tax withheld: Box 5 wages × 1.45%.

Box 5 Medicare wages are $30,000. What should Box 6 (Medicare tax at 1.45%) show?

A. $43.50

B. $435

C. $1,860

D. $4,350

GO DEEPER 1 — Reading a W-2 box by box

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

The bottom of the W-2 reports state and local wages and taxes.

Which W-2 boxes show state wages and state income tax?

A. Boxes 1 and 2

B. Boxes 16 and 17

C. Boxes 3 and 4 only

D. Boxes 5 and 6

GO DEEPER 1 — Reading a W-2 box by box

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Employers issue corrected W-2s (Form W-2c) for errors.

Kayla's W-2 has the wrong Social Security number. What should she do?

A. File with the wrong number

B. Change the number on the form by hand

C. Ignore it

D. Ask her employer for a corrected W-2

GO DEEPER 2 — Other common tax forms

Question 1 of 5 · Learn and Apply

LEARN

Form 1098-T reports qualified tuition and related expenses, which can help claim education credits.

A college sends a student Form 1098-T. What does it report?

A. Wages from a campus job

B. Interest she paid on student loans during the year

C. Gifts from relatives

D. Tuition and related expenses for education credits

GO DEEPER 2 — Other common tax forms

Question 2 of 5 · Learn and Apply

LEARN

Payment platforms report payments for goods and services on Form 1099-K. Personal gifts and reimbursements between friends are not income.

A payment app sends Form 1099-K. What does it report?

A. Money sent to friends as gifts

B. Payments received through the app for goods or services

C. Your bank balance

D. Your credit card limit

GO DEEPER 2 — Other common tax forms

Question 3 of 5 · Learn and Apply

LEARN

Brokers send 1099-DIV for dividends, 1099-INT for interest, and 1099-B for sales.

Which form reports dividends from a brokerage account?

A. Form 1099-INT

B. Form 1099-B

C. Form 1099-DIV

D. Form W-2

GO DEEPER 2 — Other common tax forms

Question 4 of 5 · Learn and Apply

LEARN

Retirement accounts send two common forms: Form 5498 reports contributions made to an IRA, and Form 1099-R reports money taken out (distributions).

Which form reports a distribution from an IRA or 401(k)?

A. Form 1099-R

B. Form 5498

C. Form W-4

D. Form 1099-NEC

GO DEEPER 2 — Other common tax forms

Question 5 of 5 · Learn and Apply

LEARN

Income is reportable whether or not you receive a form.

Kayla receives no 1099 for $300 of babysitting income. Must she report it if she files?

A. Yes; income is reportable even without a form

B. No; only income reported on a tax form counts

C. No; babysitting is never income

D. Only if over $10,000

SET 65 · Taxes and Tax Filing

Filing requirements, filing status, and dependents

MAIN skill: Decide whether to file, choose a filing status, and explain dependency

Outcome FL.TAX.65 · National topic: Earning Income · NJSLS 9.1.12: EG

Learning target: Explain filing requirements, filing status, and dependency for income tax

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Who files and why (5 questions)
  - Why: Filing decisions depend on knowing what a tax return does.
- B2 · Math link → G6-S17-M (Grade 6 6.NS.B.3): Subtract multi-digit decimals
  - Why: Refunds and balances due compare amounts withheld and owed.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Head of household and other statuses (5 questions)
- Go Deeper 2: Dependents who work (5 questions)

Practical skills beyond the standards: Filing to claim a refund of withholding

Content status: time-sensitive

Source: IRS (Publication 501 / Do I need to file?) — Filing requirements depend on income, filing status, age, and dependency; people may file to get a refund of withheld tax even when not required. https://www.irs.gov/filing/check-if-you-need-to-file-a-tax-return

Note: Deduction and threshold amounts are hypothetical for each scenario; check irs.gov for the current year.

MAIN — Decide whether to file, choose a filing status, and explain dependency

Question 1 of 5 · Learn and Apply

LEARN

Whether you must file depends on your income, filing status, age, and whether someone can claim you as a dependent. Even if you are not required to file, filing can get you a refund of tax that was withheld.

Kayla earned $3,000, and $180 of federal income tax was withheld. Her income is below the filing requirement. Why might she file anyway?

A. Because filing always raises taxes

B. Because the IRS fines everyone who does not file

C. To get the $180 of withheld tax back as a refund

D. To receive her W-2

MAIN — Decide whether to file, choose a filing status, and explain dependency

Question 2 of 5 · Learn and Apply

LEARN

Filing status affects tax brackets and the standard deduction. Statuses include single, married filing jointly, married filing separately, head of household, and qualifying surviving spouse.

Which filing status fits an unmarried person with no dependents?

A. Married filing jointly

B. Head of household

C. Qualifying surviving spouse

D. Single

MAIN — Decide whether to file, choose a filing status, and explain dependency

Question 3 of 5 · Learn and Apply

LEARN

A dependent is a person, such as a child, whom another taxpayer can claim. Dependents can still file their own returns (for example, to get a refund), but they indicate that someone can claim them and get a smaller standard deduction.

Jordan, 17, lives with his parents, who pay most of his support. What does it usually mean that his parents can claim him as a dependent?

A. Jordan cannot file a return at all

B. They may get tax benefits for him, and he checks that he can be claimed on his own return

C. Jordan pays his parents' taxes

D. Jordan's wages are added to his parents' W-2

MAIN — Decide whether to file, choose a filing status, and explain dependency

Question 4 of 5 · Learn and Apply

LEARN

Married couples can file jointly (one return together) or separately. Joint filing usually results in lower combined tax.

Married couples usually choose which filing status for the lowest combined tax?

A. Single

B. Head of household

C. Married filing jointly

D. Married filing separately in every case

MAIN — Decide whether to file, choose a filing status, and explain dependency

Question 5 of 5 · Knowledge Check

Kayla's income was $3,000 and $180 was withheld. She does not file. What happens to the $180?

A. The IRS mails it automatically

B. Her employer returns it

C. It is applied automatically to her parents' taxes

D. She does not get it back unless she files

BACKWARD B1 · concept review — Who files and why

Question 1 of 5 · Learn and Apply

LEARN

A tax return reports income, figures the tax owed for the year, and compares it with what was already paid (withholding), resulting in a refund or a balance due.

What does filing a tax return do?

A. It pays a fixed fee to the IRS

B. It calculates the year's tax and settles up with what was paid

C. It pays the year's tax for the first time

D. It is required only to get a refund

BACKWARD B1 · concept review — Who files and why

Question 2 of 5 · Learn and Apply

LEARN

Refund = amount paid (withheld) − tax owed, when positive.

If $500 was withheld and the actual tax is $200, what does filing produce?

A. A $300 refund

B. A $300 bill

C. A $700 refund

D. Nothing

BACKWARD B1 · concept review — Who files and why

Question 3 of 5 · Learn and Apply

LEARN

Marital status on December 31 is a key factor for filing status.

Which question helps decide filing status?

A. Were you married on the last day of the year?

B. How much did you earn this year?

C. Did you get a refund last year?

D. What was your credit score at the end of the year?

BACKWARD B1 · concept review — Who files and why

Question 4 of 5 · Learn and Apply

LEARN

Dependents can and sometimes must file their own returns.

Can a dependent teen file her own tax return?

A. No, never

B. Only after age 21

C. Only if her parents do not file

D. Yes

BACKWARD B1 · concept review — Who files and why

Question 5 of 5 · Knowledge Check

What is a "dependent"?

A. Anyone who has a job

B. A type of bank account

C. A person another taxpayer can claim, such as a child

D. A person who owes taxes

GO DEEPER 1 — Head of household and other statuses

Question 1 of 5 · Learn and Apply

LEARN

Head of household is for unmarried taxpayers who pay more than half the cost of a home for themselves and a qualifying person. It has a larger standard deduction and wider brackets than single.

Rosa is unmarried, pays more than half the cost of keeping up a home, and her son lives with her. Which status may she qualify for?

A. Single

B. Head of household

C. Married filing jointly

D. Married filing separately

GO DEEPER 1 — Head of household and other statuses

Question 2 of 5 · Learn and Apply

LEARN

Each filing status has its own standard deduction and bracket thresholds.

Why does filing status matter?

A. It affects the standard deduction and tax brackets

B. It decides how much is withheld from pay

C. It changes which forms the employer uses

D. It has no effect on taxes

GO DEEPER 1 — Head of household and other statuses

Question 3 of 5 · Learn and Apply

LEARN

The standard deduction is an amount subtracted from income before tax is figured; it depends on filing status. Amounts change yearly; these are stated for this scenario.

For this scenario, assume the standard deduction is $15,000 for single and $22,500 for head of household. How much more income does head of household shield from tax?

A. $7,500

B. $15,000

C. $22,500

D. $37,500

GO DEEPER 1 — Head of household and other statuses

Question 4 of 5 · Learn and Apply

LEARN

Married filing separately usually costs more tax but can make sense in some situations.

A married person filing separately often loses some credits. Why might a couple still choose it?

A. It always lowers total tax

B. It is required for newlyweds

C. Special situations, such as keeping finances separate

D. It doubles the standard deduction

GO DEEPER 1 — Head of household and other statuses

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

The IRS offers free interactive tools ("Interactive Tax Assistant") and instructions on irs.gov.

Which tool can help decide filing status?

A. A social media poll

B. Her employer's HR office

C. Last year's return, copied as is

D. The IRS's free online filing-status tool and instructions

GO DEEPER 2 — Dependents who work

Question 1 of 5 · Learn and Apply

LEARN

Dependents get a smaller standard deduction based on their earned income. Amounts change yearly; these are stated for this scenario.

A dependent's standard deduction is limited when they can be claimed by someone else. For this scenario, assume it equals the greater of $1,350 or earned income plus $450 (up to $15,000). Kayla earned $3,000. What is her standard deduction?

A. $1,350

B. $3,000

C. $3,450

D. $15,000

GO DEEPER 2 — Dependents who work

Question 2 of 5 · Learn and Apply

LEARN

Taxable income = income − deductions, but never below zero.

Kayla earned $3,000 and her standard deduction is $3,450. What is her taxable income?

A. $0

B. $450

C. $3,000

D. $6,450

GO DEEPER 2 — Dependents who work

Question 3 of 5 · Learn and Apply

LEARN

Withholding counts as tax already paid. If the tax owed is $0, the withheld amount can be refunded when you file.

With $0 taxable income, what federal income tax does Kayla owe, and what happens to the $180 withheld?

A. $180 owed again

B. $0 owed; she can get the $180 back by filing

C. $450 owed

D. $0 owed, and the $180 that was withheld is lost

GO DEEPER 2 — Dependents who work

Question 4 of 5 · Learn and Apply

LEARN

FICA taxes are separate from income tax and generally are not refunded based on income tax owed.

Kayla still pays Social Security and Medicare on her $3,000 wages. Are those refunded when she files?

A. Yes, always

B. No; FICA is not refunded because income tax is $0

C. Only if she asks her employer

D. Only for teens under 18

GO DEEPER 2 — Dependents who work

Question 5 of 5 · Knowledge Check · Practical how-to

Why should Kayla check "someone can claim you as a dependent" on her return?

A. To get a larger refund illegally

B. To avoid paying FICA

C. To use the correct standard deduction and avoid conflicts with her parents' return

D. Because it raises her refund

SET 66 · Taxes and Tax Filing

From gross income to taxable income

MAIN skill: Calculate adjusted gross income and taxable income using adjustments and deductions

Outcome FL.TAX.66 · National topic: Earning Income · NJSLS 9.1.12: EG

Learning target: Calculate taxable income from gross income using adjustments and deductions

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

B1 · Concept review: Subtracting in steps (5 questions)

Why: Taxable income comes from a sequence of subtractions; students must apply them in order.

B2 · Math link → G6-S17-M (Grade 6 6.NS.B.3): Subtract multi-digit decimals

Why: AGI and taxable income come from subtracting adjustments and deductions.

B3 · Math link → G8-S18-M (Grade 8 8.EE.C.7.b): Write and solve linear equations with rational coefficients for real-world problems

Why: Taxable income = income − adjustments − deduction is a linear relationship.

After 5 of 5 correct, Go Deeper unlocks (a chain):

Go Deeper 1: Itemized deductions (5 questions)

Go Deeper 2: Adjustments and AGI (5 questions)

Practical skills beyond the standards: Choosing standard vs itemized deductions

Content status: time-sensitive

Source: IRS (Federal income tax rates and brackets) — The U.S. uses progressive marginal brackets; bracket thresholds and the standard deduction change every year. This course uses stated hypothetical amounts. https://www.irs.gov/filing/federal-income-tax-rates-and-brackets

Note: Standard deduction and other amounts are hypothetical for each scenario; check irs.gov for the current year.

MAIN — Calculate adjusted gross income and taxable income using adjustments and deductions

Question 1 of 5 · Learn and Apply

LEARN

Taxable income is the income that tax rates are applied to. Steps: total (gross) income − adjustments (such as some retirement or student loan interest deductions) = adjusted gross income (AGI); AGI − deductions (the standard deduction or itemized deductions) = taxable income.

For this scenario, assume the standard deduction for a single filer is $15,000. Omar's total income is $55,000, with no adjustments. What is his taxable income?

A. $15,000

B. $40,000

C. $55,000

D. $70,000

MAIN — Calculate adjusted gross income and taxable income using adjustments and deductions

Question 2 of 5 · Learn and Apply

LEARN

Adjustments ("above-the-line" deductions) are subtracted from total income to get adjusted gross income (AGI).

Ana has total income of $48,000 and a $2,000 adjustment for a deductible traditional IRA contribution. What is her AGI?

A. $2,000

B. $46,000

C. $48,000

D. $50,000

MAIN — Calculate adjusted gross income and taxable income using adjustments and deductions

Question 3 of 5 · Knowledge Check

With AGI of $46,000 and a $15,000 standard deduction (this scenario), what is Ana's taxable income?

A. $31,000

B. $33,000

C. $46,000

D. $61,000

MAIN — Calculate adjusted gross income and taxable income using adjustments and deductions

Question 4 of 5 · Learn and Apply

LEARN

Taxpayers choose EITHER the standard deduction (a fixed amount based on filing status) OR itemized deductions (such as state and local taxes, mortgage interest, and charitable gifts, within limits), whichever is larger.

Leo can take a $15,000 standard deduction or itemize deductions that total $11,200. Which should he choose?

A. Itemize, because itemizing is always the better choice

B. Both, to subtract $26,200

C. Neither, to pay more tax

D. The standard deduction, because it is larger

MAIN — Calculate adjusted gross income and taxable income using adjustments and deductions

Question 5 of 5 · Knowledge Check

Which is GROSS income for a worker?

A. All wages before any deductions or taxes

B. Take-home pay deposited each payday

C. Taxable income after the standard deduction

D. Only overtime earnings

BACKWARD B1 · concept review — Subtracting in steps

Question 1 of 5 · Learn and Apply

LEARN

Multi-step subtraction: do each subtraction in order.

Start with $50,000. Subtract $3,000, then subtract $15,000. What is left?

A. $32,000

B. $35,000

C. $47,000

D. $68,000

BACKWARD B1 · concept review — Subtracting in steps

Question 2 of 5 · Learn and Apply

LEARN

The order is: total income → AGI → taxable income → tax.

Which comes FIRST when figuring taxable income?

A. Subtracting the standard deduction

B. Adding up all income

C. Applying tax rates

D. Calculating a refund

BACKWARD B1 · concept review — Subtracting in steps

Question 3 of 5 · Learn and Apply

LEARN

Taxable income cannot go below zero.

If deductions are larger than income, what is taxable income?

A. A negative number that the IRS pays

B. Equal to the deductions

C. $0

D. Equal to income

BACKWARD B1 · concept review — Subtracting in steps

Question 4 of 5 · Knowledge Check

Which is larger: $11,200 or $15,000?

A. $15,000

B. $11,200

C. They are equal

D. $26,200

BACKWARD B1 · concept review — Subtracting in steps

Question 5 of 5 · Knowledge Check

What does "deduction" mean on a tax return?

A. A tax added to income

B. A refund check

C. A tax credit that lowers tax dollar for dollar

D. An amount subtracted from income before tax is figured

GO DEEPER 1 — Itemized deductions

Question 1 of 5 · Learn and Apply

LEARN

Itemized deductions include certain state and local taxes (up to a limit), home mortgage interest, charitable contributions, and some medical expenses above a threshold.

Sam's possible itemized deductions: state and local taxes $6,000, mortgage interest $7,500, charitable gifts $1,200. What is the total?

A. $7,500

B. $8,700

C. $13,500

D. $14,700

GO DEEPER 1 — Itemized deductions

Question 2 of 5 · Learn and Apply

LEARN

Taxpayers choose the larger of the standard deduction or itemized deductions.

With $14,700 of itemized deductions and a $15,000 standard deduction (this scenario), which should Sam take?

A. The standard deduction

B. Itemized, because it is more detailed

C. Both together

D. Neither

GO DEEPER 1 — Itemized deductions

Question 3 of 5 · Learn and Apply

LEARN

Itemizing only helps by the amount it exceeds the standard deduction.

Sam gives $600 more to charity, raising itemized deductions to $15,300. How much more is deducted than with the standard deduction?

A. $0

B. $300

C. $600

D. $15,300

GO DEEPER 1 — Itemized deductions

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Itemized deductions must be supported by records.

Which records support itemized deductions?

A. Social media posts

B. Verbal promises

C. Screenshots of a bank logo

D. Receipts, mortgage statements, and donation acknowledgments

GO DEEPER 1 — Itemized deductions

Question 5 of 5 · Knowledge Check

Why do most taxpayers take the standard deduction?

A. Itemizing is allowed only for homeowners

B. It is larger than their itemized deductions

C. The standard deduction is always $0

D. Itemizing would raise their total taxable income

GO DEEPER 2 — Adjustments and AGI

Question 1 of 5 · Learn and Apply

LEARN

Adjustments (subtracted to get AGI) include certain student loan interest, deductible traditional IRA contributions, HSA contributions, and half of self-employment tax.

Which item is an ADJUSTMENT to income (reducing AGI)?

A. Mortgage interest (an itemized one)

B. A child tax credit

C. Deductible student loan interest

D. A sales tax refund

GO DEEPER 2 — Adjustments and AGI

Question 2 of 5 · Learn and Apply

LEARN

Self-employed people may subtract half of their self-employment tax as an adjustment.

A self-employed worker's self-employment tax is $1,400. Half of it is an adjustment. How much reduces AGI?

A. $350

B. $700

C. $1,400

D. $2,800

GO DEEPER 2 — Adjustments and AGI

Question 3 of 5 · Learn and Apply

LEARN

AGI is used to determine eligibility for many tax benefits, such as credits and Roth IRA contributions.

Why does a lower AGI matter beyond the tax itself?

A. AGI sets your credit score

B. AGI determines your filing status

C. AGI is not used anywhere else

D. Many credits and deductions phase out at higher AGI

GO DEEPER 2 — Adjustments and AGI

Question 4 of 5 · Learn and Apply

LEARN

Taxable income = total income − adjustments − deduction.

Leo's income is $40,000; adjustments $2,500; standard deduction $15,000 (this scenario). What is his taxable income?

A. $22,500

B. $25,000

C. $37,500

D. $57,500

GO DEEPER 2 — Adjustments and AGI

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

The IRS publishes instructions for every form.

Which free resource explains which items are adjustments?

A. The Form 1040 instructions on irs.gov

B. Her W-2 form

C. Her bank's year-end summary

D. A tax-preparer's refund loan advertisement

SET 67 · Taxes and Tax Filing

Marginal and effective tax rates

MAIN skill: Calculate income tax with marginal brackets and compare marginal and effective rates

Outcome FL.TAX.67 · National topic: Earning Income · NJSLS 9.1.12: EG

Learning target: Calculate income tax using progressive brackets; compare marginal and effective rates

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Taxing income in layers (5 questions)
  - Why: Bracket tax works like tiered pricing: each tier is charged its own rate.
- B2 · Math link → ALG1-S75-M (Algebra 1 HSF-IF.C.7.b): Graph piecewise-defined and step functions
  - Why: Bracket tax is a piecewise-defined function of income.
- B3 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  - Why: Each bracket's tax is a percent of the income in it.
- B4 · Math link → G7-S29-M (Grade 7 7.EE.B.3): Solve multistep problems with positive and negative rational numbers in any form
  - Why: Bracket calculations combine several subtraction and percent steps.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Three brackets and effective rates (5 questions)
- Go Deeper 2: The "higher bracket" myth (5 questions)

Practical skills beyond the standards: Debunking the higher-bracket myth

Content status: time-sensitive

Source: IRS (Federal income tax rates and brackets) — Federal income tax uses progressive marginal brackets; thresholds change yearly. This course uses stated hypothetical brackets.
https://www.irs.gov/filing/federal-income-tax-rates-and-brackets

Note: Brackets are hypothetical; actual brackets change each year.

MAIN — Calculate income tax with marginal brackets and compare marginal and effective rates

Question 1 of 5 · Learn and Apply

LEARN

Federal income tax uses marginal brackets: income is taxed in layers. Each layer of income is taxed at its own rate. Moving into a higher bracket raises the rate only on the dollars in that bracket, not on all your income.

For this scenario, use these hypothetical single-filer brackets: 10% on taxable income up to $12,000; 12% on income from $12,000 to $48,000; 22% on income from $48,000 to $100,000.
Under a bracket system like this, what rate applies to the FIRST $12,000 of everyone's taxable income?

A. The person's highest bracket rate

B. 10%

C. 22%

D. 0%

MAIN — Calculate income tax with marginal brackets and compare marginal and effective rates

Question 2 of 5 · Learn and Apply

LEARN

To compute tax with brackets: tax each layer of income at its rate, then add the layers.

For this scenario, use these hypothetical single-filer brackets: 10% on taxable income up to $12,000; 12% on income from $12,000 to $48,000; 22% on income from $48,000 to $100,000.
Omar's taxable income is $40,000. What is his federal income tax?

A. $4,000

B. $4,560

C. $4,800

D. $8,800

MAIN — Calculate income tax with marginal brackets and compare marginal and effective rates

Question 3 of 5 · Learn and Apply

LEARN

The marginal rate is the rate on your last (next) dollar of income. The effective (average) rate is total tax ÷ income × 100, which is lower than the marginal rate because lower layers are taxed less.

Omar's taxable income is $40,000 and his tax is $4,560. What is his EFFECTIVE tax rate?

A. 8.8%

B. 10%

C. 11.4%

D. 12%

MAIN — Calculate income tax with marginal brackets and compare marginal and effective rates

Question 4 of 5 · Learn and Apply

LEARN

A raise is taxed at the marginal rate of the bracket it falls in. Moving further into a bracket never makes total take-home pay go down from income tax alone.

For this scenario, use these hypothetical single-filer brackets: 10% on taxable income up to $12,000; 12% on income from $12,000 to $48,000; 22% on income from $48,000 to $100,000.
Leo's taxable income is $60,000. He gets a $1,000 raise. How much more federal income tax does he owe?

A. $120

B. $220

C. $1,000

D. $1,540

MAIN — Calculate income tax with marginal brackets and compare marginal and effective rates

Question 5 of 5 · Knowledge Check

Which statement about marginal tax brackets is TRUE?

A. Entering a higher bracket raises the tax rate on all of a person's income

B. Everyone pays the same rate on all income

C. Only the income inside a higher bracket is taxed at the higher rate

D. Brackets apply only to people over 65

BACKWARD B1 · concept review — Taxing income in layers

Question 1 of 5 · Learn and Apply

LEARN

Tiered pricing charges different rates for different layers. Income tax brackets work the same way.

A water bill charges $2 per unit for the first 10 units and $3 per unit after that. What is the bill for 14 units?

A. $28

B. $32

C. $34

D. $42

BACKWARD B1 · concept review — Taxing income in layers

Question 2 of 5 · Learn and Apply

LEARN

Income in a bracket = total income − the bottom of that bracket (up to the bracket's top).

Using 10% on the first $12,000 and 12% above it, how much income is in the 12% layer for taxable income of $20,000?

A. $8,000

B. $12,000

C. $20,000

D. $32,000

BACKWARD B1 · concept review — Taxing income in layers

Question 3 of 5 · Learn and Apply

LEARN

Tax on a layer = income in the layer × rate.

What is 12% of $8,000?

A. $96

B. $960

C. $8,960

D. $9,600

BACKWARD B1 · concept review — Taxing income in layers

Question 4 of 5 · Learn and Apply

LEARN

Total tax = tax on each layer, added together.

Using 10% on the first $12,000 and 12% above it, what is the total tax on $20,000?

A. $960

B. $2,000

C. $2,160

D. $2,400

BACKWARD B1 · concept review — Taxing income in layers

Question 5 of 5 · Knowledge Check

What is a "marginal" rate?

A. The rate on the next dollar earned

B. The average rate paid across the whole income

C. The lowest rate in the system

D. A rate set by the taxpayer

GO DEEPER 1 — Three brackets and effective rates

Question 1 of 5 · Learn and Apply

LEARN

With three brackets, figure the tax in each of the three layers and add them.

For this scenario, use these hypothetical single-filer brackets: 10% on taxable income up to $12,000; 12% on income from $12,000 to $48,000; 22% on income from $48,000 to $100,000.
What is the tax on $60,000 of taxable income?

A. $5,520

B. $7,200

C. $8,160

D. $13,200

GO DEEPER 1 — Three brackets and effective rates

Question 2 of 5 · Learn and Apply

LEARN

Effective rate = total tax ÷ taxable income × 100.

Tax of $8,160 on $60,000 of taxable income is what effective rate?

A. 7.4%

B. 12%

C. 13.6%

D. 22%

GO DEEPER 1 — Three brackets and effective rates

Question 3 of 5 · Learn and Apply

LEARN

Tax as a share of total income is lower still than the effective rate on taxable income, because deductions shield part of income.

A person earns $55,000 of wages and has $40,000 of taxable income. Their tax is $4,560. What share of their WAGES goes to federal income tax (nearest tenth)?

A. 8.3%

B. 11.4%

C. 12.0%

D. 83%

GO DEEPER 1 — Three brackets and effective rates

Question 4 of 5 · Learn and Apply

LEARN

The marginal rate is the rate on the next dollar of income. The effective rate is total tax ÷ total income, an average across all brackets. Extra income is stacked on top of what you already earn.

Which rate should be used to estimate the tax on extra income from a side job?

A. The effective rate

B. The rate for the lowest bracket

C. The marginal rate

D. Zero, because side income is not taxed

GO DEEPER 1 — Three brackets and effective rates

Question 5 of 5 · Learn and Apply

LEARN

If all income is within the first bracket, only the first rate applies.

For this scenario, use these hypothetical single-filer brackets: 10% on taxable income up to $12,000; 12% on income from $12,000 to $48,000; 22% on income from $48,000 to $100,000.
What is the tax on $10,000 of taxable income?

A. $1,200

B. $1,200 plus 12%

C. $2,200

D. $1,000

GO DEEPER 2 — The "higher bracket" myth

Question 1 of 5 · Learn and Apply

LEARN

Under marginal brackets, earning more always increases after-income-tax pay, because only the extra income is taxed at the higher rate.

Rosa turns down extra shifts, saying, "If I earn more I'll be in a higher bracket and take home less." Under marginal brackets, what is TRUE?

A. She is right; all her income would be taxed more

B. She keeps most of each extra dollar; only that income is taxed at the higher rate

C. She would owe more tax than she earns

D. Extra income is never taxed

GO DEEPER 2 — The "higher bracket" myth

Question 2 of 5 · Learn and Apply

LEARN

Extra wages face both income tax at the marginal rate and FICA (7.65%).

Rosa earns $1,000 more, taxed at 22% income tax and 7.65% FICA. How much of the $1,000 does she keep?

A. $0

B. $703.50

C. $780.00

D. $923.50

GO DEEPER 2 — The "higher bracket" myth

Question 3 of 5 · Learn and Apply

LEARN

Some benefits shrink as income rises (phase-outs), which can feel like a higher tax, but brackets alone never reduce take-home pay.

Which situation CAN reduce a person's benefits when income rises?

A. Losing eligibility for some income-based credits or aid

B. Tax brackets themselves

C. FICA taxes

D. Sales tax

GO DEEPER 2 — The "higher bracket" myth

Question 4 of 5 · Learn and Apply

LEARN

Only the dollars above the bracket threshold are taxed at the higher rate.

A person moves from $47,000 to $49,000 of taxable income, crossing into the 22% bracket at $48,000 (this scenario). How much of the extra $2,000 is taxed at 22%?

A. $0

B. $1,000

C. $2,000

D. $49,000

GO DEEPER 2 — The "higher bracket" myth

Question 5 of 5 · Learn and Apply

LEARN

Tax on the extra income = (amount in the lower bracket × its rate) + (amount in the higher bracket × its rate).

For that $2,000 increase (from $47,000 to $49,000, crossing $48,000), how much more tax is owed?

A. $240

B. $340

C. $440

D. $10,780

SET 68 · Taxes and Tax Filing

Deductions and credits

MAIN skill: Compare the value of tax deductions and tax credits, including refundable credits

Outcome FL.TAX.68 · National topic: Earning Income · NJSLS 9.1.12: EG
Learning target: Explain how deductions and credits affect tax owed

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Lowering income versus lowering tax (5 questions)
  Why: The deduction-versus-credit difference is about which number is reduced.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: A deduction's value is the deduction times the tax rate.
- B3 · Math link → G7-S15-M (Grade 7 7.NS.A.1.b): Interpret sums of rational numbers in real-world situations
  Why: Refundable credits can push tax below zero, producing a refund.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Education credits and other common credits (5 questions)
- Go Deeper 2: Putting deductions and credits together (5 questions)

Practical skills beyond the standards: Claiming refundable credits

Content status: time-sensitive
Source: IRS (Credits and deductions for individuals) — Deductions reduce taxable income; credits reduce tax dollar for dollar; refundable credits can produce a refund beyond tax owed (for example, the Earned Income Tax Credit). https://www.irs.gov/credits-deductions-for-individuals
Note: Credit and bracket amounts are hypothetical; check irs.gov for the current year.

MAIN — Compare the value of tax deductions and tax credits, including refundable credits

Question 1 of 5 · Learn and Apply

LEARN

A deduction lowers taxable income, so it saves tax equal to the deduction × your marginal rate. A credit lowers the tax itself, dollar for dollar.

Omar's marginal tax rate is 12%. Which saves him more tax: a $1,000 deduction or a $1,000 credit?

A. The deduction: $1,000 vs $120

B. They save the same amount

C. The credit: $1,000 vs $120

D. The deduction: $1,120 vs $1,000

MAIN — Compare the value of tax deductions and tax credits, including refundable credits

Question 2 of 5 · Learn and Apply

LEARN

Tax after credits = tax before credits − credits.

Omar's tax before credits is $4,560. He qualifies for a $1,500 credit. What is his tax after the credit?

A. $1,500

B. $3,060

C. $4,380

D. $6,060

MAIN — Compare the value of tax deductions and tax credits, including refundable credits

Question 3 of 5 · Learn and Apply

LEARN

A nonrefundable credit can reduce your tax to zero but not below. A refundable credit can reduce tax below zero, and the extra is paid to you as a refund.

Tia's tax before credits is $300. She qualifies for a $1,000 NONREFUNDABLE credit. What is her tax after the credit?

A. −$700, paid to her as a refund

B. $0

C. $300

D. $700

MAIN — Compare the value of tax deductions and tax credits, including refundable credits

Question 4 of 5 · Learn and Apply

LEARN

Refundable credits are paid out even when they exceed the tax owed.

Tia owes $300 of tax before credits and qualifies for a $1,000 REFUNDABLE credit. What happens?

A. Her tax becomes $0 and the extra $700 is lost

B. Her tax rises to $1,300

C. Nothing, because refundable credits need $1,000 of tax

D. Her tax becomes $0 and she receives $700 more

MAIN — Compare the value of tax deductions and tax credits, including refundable credits

Question 5 of 5 · Learn and Apply

LEARN

The Earned Income Tax Credit helps low- to moderate-income workers, especially families with children. It is refundable, so it can result in a refund even if no tax is owed. Many eligible workers do not claim it.

Which credit is designed for low- to moderate-income workers and is refundable?

A. The standard deduction

B. The Earned Income Tax Credit (EITC)

C. Itemized mortgage interest

D. The yearly 401(k) contribution limit

BACKWARD B1 · concept review — Lowering income versus lowering tax

Question 1 of 5 · Learn and Apply

LEARN

Deductions reduce the income that is taxed. Credits reduce the tax itself.

A deduction reduces which number?

A. The tax owed, dollar for dollar

B. Gross pay on the W-2

C. Taxable income

D. The refund only

BACKWARD B1 · concept review — Lowering income versus lowering tax

Question 2 of 5 · Learn and Apply

LEARN

Credits come off the tax bill directly.

A credit reduces which number?

A. Gross income

B. Taxable income

C. Wages

D. The tax owed

BACKWARD B1 · concept review — Lowering income versus lowering tax

Question 3 of 5 · Learn and Apply

LEARN

Tax saved by a deduction = deduction × marginal rate.

A $500 deduction at a 10% rate saves how much tax?

A. $5

B. $50

C. $500

D. $550

BACKWARD B1 · concept review — Lowering income versus lowering tax

Question 4 of 5 · Learn and Apply

LEARN

A credit saves its full amount, dollar for dollar, if enough tax is owed.

A $500 credit saves how much tax (if at least $500 of tax is owed)?

A. $0

B. $50

C. $500

D. $5,000

BACKWARD B1 · concept review — Lowering income versus lowering tax

Question 5 of 5 · Knowledge Check

Which word describes a credit that can create a refund beyond the tax owed?

A. Refundable

B. Nonrefundable

C. Itemized

D. Adjusted

GO DEEPER 1 — Education credits and other common credits

Question 1 of 5 · Learn and Apply

LEARN

Education credits can lower tax for college costs. Rules and amounts are set by law and can change; this question states its amounts.

For this scenario, assume an education credit equals 100% of the first $2,000 of tuition plus 25% of the next $2,000. Kim paid $3,000 of tuition. What is the credit?

A. $750

B. $2,250

C. $2,500

D. $3,000

GO DEEPER 1 — Education credits and other common credits

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Education tax forms: colleges send Form 1098-T reporting tuition and related expenses; loan servicers send Form 1098-E reporting student loan interest paid.

Which form from a college supports an education credit?

A. Form 1098-E

B. Form 1098-T

C. Form 1099-INT

D. Form W-4

GO DEEPER 1 — Education credits and other common credits

Question 3 of 5 · Learn and Apply

LEARN

Refundable credits like the EITC generally require filing a return.

Many eligible workers do not claim the EITC. What is a likely reason?

A. The EITC is only for people with children

B. Claiming it is only for business owners

C. It is paid automatically to everyone without filing

D. They do not know they qualify or do not file

GO DEEPER 1 — Education credits and other common credits

Question 4 of 5 · Learn and Apply

LEARN

A deduction is worth more to someone in a higher bracket; a credit is worth the same to everyone who can use it.

Two taxpayers each get a $2,000 deduction. One is in the 22% bracket, the other in the 10% bracket. How much more does the deduction save the first taxpayer?

A. $200

B. $240

C. $440

D. $2,000

GO DEEPER 1 — Education credits and other common credits

Question 5 of 5 · Knowledge Check

Which is generally worth the same dollar amount to taxpayers in different brackets?

A. A deduction

B. An adjustment

C. A credit (if fully usable)

D. An itemized deduction of $1,000

GO DEEPER 2 — Putting deductions and credits together

Question 1 of 5 · Learn and Apply

LEARN

Deductions come off income first; credits come off the tax at the end.

For this scenario, use these hypothetical single-filer brackets: 10% on taxable income up to $12,000; 12% on income from $12,000 to $48,000; 22% on income from $48,000 to $100,000.
Ana's total income is $52,000, her standard deduction is $15,000 (this scenario), and she has a $1,000 credit. What is her taxable income?

A. $36,000

B. $37,000

C. $51,000

D. $52,000

GO DEEPER 2 — Putting deductions and credits together

Question 2 of 5 · Learn and Apply

LEARN

Apply the brackets to taxable income, layer by layer.

For this scenario, use these hypothetical single-filer brackets: 10% on taxable income up to $12,000; 12% on income from $12,000 to $48,000; 22% on income from $48,000 to $100,000.
Ana's taxable income is $37,000. What is her tax before credits?

A. $3,000

B. $3,700

C. $4,200

D. $4,440

GO DEEPER 2 — Putting deductions and credits together

Question 3 of 5 · Learn and Apply

LEARN

Final tax = tax before credits − credits.

Ana's tax before credits is $4,200, and she has a $1,000 credit. What is her final tax?

A. $1,000

B. $3,200

C. $4,080

D. $5,200

GO DEEPER 2 — Putting deductions and credits together

Question 4 of 5 · Learn and Apply

LEARN

The last section of the return compares tax with withholding and payments.

Which step comes LAST on the 1040?

A. Comparing the final tax with payments to find the refund or amount owed

B. Adding up income

C. Subtracting the standard deduction

D. Listing wages from W-2s

GO DEEPER 2 — Putting deductions and credits together

Question 5 of 5 · Learn and Apply

LEARN

Refund = amount withheld − tax owed (when positive).

Ana's final tax is $3,200 and her W-2 shows $3,650 withheld. What is the result?

A. A $450 balance due

B. A $6,850 refund

C. A $450 refund

D. No refund or bill

SET 69 · Taxes and Tax Filing

Refund or balance due

MAIN skill: Compare tax liability with withholding to find a refund or balance due, and interpret refunds correctly

Outcome FL.TAX.69 · National topic: Earning Income · NJSLS 9.1.12: EG, PB

Learning target: Explain why taxpayers receive refunds or owe tax; a refund is not extra income

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Tax owed versus tax paid (5 questions)
  - Why: Refund problems depend on separating what was owed from what was already paid.
- B2 · Math link → G7-S15-M (Grade 7 7.NS.A.1.b): Interpret sums of rational numbers in real-world situations
  - Why: A refund is a positive result and a balance due a negative one.
- B3 · Math link → G6-S17-M (Grade 6 6.NS.B.3): Subtract multi-digit decimals
  - Why: Refunds and balances compare two amounts.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Fixing withholding after a surprise (5 questions)
- Go Deeper 2: If you cannot pay in full (5 questions)

Practical skills beyond the standards: Adjusting withholding after a refund or bill; IRS payment plans

Content status: time-sensitive

Source: IRS — Individual returns are generally due April 15 (next business day if on a weekend or holiday); an extension extends the time to file, not to pay; IRS Free File and VITA offer free filing help to eligible taxpayers. https://www.irs.gov/filing

Question 1 of 5 · Learn and Apply

LEARN

Your tax liability is the total tax you owe for the year. Withholding and estimated payments are prepayments. If prepayments are more than the liability, you get a refund; if less, you owe the difference (a balance due).

Omar's total tax for the year is $4,560. His employer withheld $5,200. What happens when he files?

A. He owes $640

B. He gets a $640 refund

C. He gets a $5,200 refund

D. He owes $9,760

MAIN — Compare tax liability with withholding to find a refund or balance due, and interpret refunds correctly

Question 2 of 5 · Knowledge Check

Leo's total tax is $4,560, and only $4,000 was withheld. What happens?

A. He gets a $560 refund

B. He owes $4,560 again

C. Nothing; withholding settles everything

D. He owes $560

MAIN — Compare tax liability with withholding to find a refund or balance due, and interpret refunds correctly

Question 3 of 5 · Learn and Apply

LEARN

A refund means too much was withheld during the year. The size of the refund is not the same as how much tax you paid; your actual tax is your liability.

Kim says, "I got a $1,200 refund — free money from the government!" Which statement is accurate?

A. The refund is her own overpaid tax being returned

B. The refund is a bonus on top of her pay

C. A big refund means she paid less tax

D. Refunds are loans from the IRS that must be repaid later

MAIN — Compare tax liability with withholding to find a refund or balance due, and interpret refunds correctly

Question 4 of 5 · Learn and Apply

LEARN

Over-withholding is like an interest-free loan to the government. Adjusting your W-4 can put that money in each paycheck instead.

Kim's $1,200 refund means about $100 a month was over-withheld. If she had kept that $100 a month in a savings account at 4%, roughly how much interest might she have earned over the year (about half a year on average)?

A. $0

B. $24

C. $48

D. $1,200

MAIN — Compare tax liability with withholding to find a refund or balance due, and interpret refunds correctly

Question 5 of 5 · Learn and Apply

LEARN

Tax liability = withholding − refund, or withholding + amount owed.

Two workers each paid $5,000 of withholding. Ana gets a $1,000 refund; Ben owes $200. Who had the larger tax liability?

A. Ana, because she got a refund

B. Ben: $5,200 vs $4,000

C. They had equal liabilities

D. Ana: $6,000 vs $4,800

BACKWARD B1 · concept review — Tax owed versus tax paid

Question 1 of 5 · Learn and Apply

LEARN

Liability is what you owe for the year. Withholding is what you already paid toward it.

What is "tax liability"?

A. The amount withheld from each paycheck

B. The refund amount

C. Gross income

D. The total tax owed for the year

BACKWARD B1 · concept review — Tax owed versus tax paid

Question 2 of 5 · Learn and Apply

LEARN

Paid − owed: positive means refund; negative means balance due.

Owed $2,000; paid $2,500. What is the result?

A. A $500 balance due

B. A $4,500 refund

C. A $500 refund

D. A $2,500 refund

BACKWARD B1 · concept review — Tax owed versus tax paid

Question 3 of 5 · Knowledge Check

Owed $2,000; paid $1,700. What is the result?

A. A $300 balance due

B. A $300 refund

C. A $3,700 balance due

D. No result

BACKWARD B1 · concept review — Tax owed versus tax paid

Question 4 of 5 · Knowledge Check

Where does a refund come from?

A. A government gift program for workers

B. Tax that was overpaid during the year

C. The employer's profits

D. A bank loan

BACKWARD B1 · concept review — Tax owed versus tax paid

Question 5 of 5 · Knowledge Check

Which number on a 1040 shows tax already paid through work?

A. Taxable income

B. Standard deduction

C. Federal income tax withheld

D. Adjusted gross income (AGI)

GO DEEPER 1 — Fixing withholding after a surprise

Question 1 of 5 · Learn and Apply

LEARN

If you owed at filing, you can add extra withholding on Form W-4 (Step 4(c)) to spread the amount across paychecks.

Leo owed $560 at filing. To avoid that next year with 26 paychecks, about how much extra should he have withheld per paycheck (nearest dollar)?

A. $11

B. $22

C. $47

D. $560

GO DEEPER 1 — Fixing withholding after a surprise

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Form W-4 controls how much income tax is withheld from each paycheck; you can update it at any time.

Kim got a $1,200 refund and would rather have money in each paycheck. What should she do?

A. Ask the IRS to send her a smaller refund

B. Stop filing a return

C. Quit her job

D. Update her W-4 so less is withheld

GO DEEPER 1 — Fixing withholding after a surprise

Question 3 of 5 · Learn and Apply

LEARN

Some people like getting a lump sum. The trade-off is less money in each paycheck during the year.

Why do some people prefer a refund anyway?

A. It works like forced saving for a planned purchase

B. Refunds earn high interest from the IRS while they wait

C. Refunds lower total tax

D. Refunds are tax-free bonuses

GO DEEPER 1 — Fixing withholding after a surprise

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

The IRS publishes a free Tax Withholding Estimator on irs.gov that uses your pay stubs to suggest W-4 settings.

Which tool helps set withholding close to the actual tax?

A. Her last pay stub alone

B. The IRS Tax Withholding Estimator

C. A credit report

D. A paycheck calculator from her bank

GO DEEPER 1 — Fixing withholding after a surprise

Question 5 of 5 · Learn and Apply

LEARN

Tax on side income can be covered by extra withholding at a regular job or by quarterly estimated payments.

A worker with a side gig owes $900 extra each year. Which approach pays it gradually?

A. Raise W-4 withholding at the main job or make quarterly estimated payments

B. Ignore it until April each year

C. Ask the client to pay the tax

D. Pay the whole $900 in April each year

GO DEEPER 2 — If you cannot pay in full

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

The penalty for not filing is usually larger than the penalty for not paying. The IRS offers payment plans (installment agreements). Interest and penalties still apply to unpaid amounts.

Leo owes $560 but can pay only $200 by the deadline. What is the best step?

A. Do not file at all until he can pay every single dollar

B. Ignore the bill

C. Use a payday loan

D. File on time, pay $200, and set up a payment plan

GO DEEPER 2 — If you cannot pay in full

Question 2 of 5 · Learn and Apply

LEARN

The IRS charges separate penalties for filing late and paying late; the late-filing penalty is generally larger.

Which penalty is generally LARGER per month: failure to file or failure to pay?

A. Failure to pay

B. They are always identical

C. Failure to file

D. Neither exists if a refund is due

GO DEEPER 2 — If you cannot pay in full

Question 3 of 5 · Learn and Apply

LEARN

An extension (Form 4868) gives more time to file, but any tax owed is still due by the original deadline.

Does a filing extension give more time to PAY taxes owed?

A. Yes, six more months to pay with no interest

B. Yes, but only for students

C. Yes, if requested by phone

D. No; it extends the time to file, not to pay

GO DEEPER 2 — If you cannot pay in full

Question 4 of 5 · Learn and Apply

LEARN

Equal payments = total owed ÷ number of payments.

Leo owes $360 and sets up a 6-month payment plan, ignoring interest and fees. What is each payment?

A. $36

B. $60

C. $360

D. $2,160

GO DEEPER 2 — If you cannot pay in full

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

The IRS lists official payment options on irs.gov. It never demands gift cards or crypto.

Which payment method should be used to pay the IRS?

A. Gift cards bought at a store

B. Official options listed on irs.gov, such as direct debit

C. Cryptocurrency sent to a caller

D. Cash mailed to a P.O. box given by someone on a phone call

SET 70 · Taxes and Tax Filing

Filing a return: methods, deadlines, and scams

MAIN skill: Choose a filing method, meet deadlines, and avoid tax scams

Outcome FL.TAX.70 · National topic: Earning Income · NJSLS 9.1.12: EG, FI

Learning target: Explain how to file taxes, filing deadlines, and how to avoid tax fraud

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

B1 · Concept review: Deadlines and dates (5 questions)

Why: Filing questions rely on reading deadlines and counting time.

After 5 of 5 correct, Go Deeper unlocks (a chain):

Content status: time-sensitive

Source: IRS — Individual returns are generally due April 15 (next business day if on a weekend or holiday); an extension extends the time to file, not to pay; IRS Free File and VITA offer free filing help to eligible taxpayers. https://www.irs.gov/filing

Source: IRS (Tax scams) — The IRS does not demand immediate payment by gift card, wire, or cryptocurrency, or threaten arrest by phone. https://www.irs.gov/newsroom/tax-scams-consumer-alerts

MAIN — Choose a filing method, meet deadlines, and avoid tax scams

Question 1 of 5 · Learn and Apply

LEARN

Federal returns for a calendar year are generally due April 15 of the following year. If that day falls on a weekend or legal holiday, the deadline moves to the next business day.

When are federal individual income tax returns generally due?

A. December 31 of the tax year

B. January 31

C. April 15 (next business day if it falls on a weekend or holiday)

D. July 4

MAIN — Choose a filing method, meet deadlines, and avoid tax scams

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Ways to file: tax software (including IRS Free File for eligible incomes), free in-person help through VITA (Volunteer Income Tax Assistance) for eligible taxpayers, a paid preparer, or paper forms. E-filing with direct deposit gets refunds fastest.

Kayla, a student with simple taxes, wants to file for free. Which options may be available?

A. IRS Free File or a VITA free tax help site

B. Only an expensive paid preparer

C. Filing through a social media influencer's link

D. Mailing her W-2 to her employer

MAIN — Choose a filing method, meet deadlines, and avoid tax scams

Question 3 of 5 · Learn and Apply

LEARN

IRS impersonation scams are common. The IRS generally contacts people first by mail, never demands immediate payment by gift card, wire, or cryptocurrency, and does not threaten arrest by phone.

A caller says he is from the IRS and that Kayla will be arrested unless she pays $900 today with gift cards. What should she do?

A. Buy the gift cards to avoid arrest

B. Give her Social Security number to verify

C. Pay half now to show good faith

D. Hang up; the IRS does not demand gift-card payment or threaten arrest by phone

MAIN — Choose a filing method, meet deadlines, and avoid tax scams

Question 4 of 5 · Learn and Apply

LEARN

An automatic extension (Form 4868) moves the filing deadline about six months, generally to October 15, but tax owed is still due in April.

Kayla files for a 6-month extension. What new deadline does she have, and what is NOT extended?

A. About October 15 to file and to pay

B. About October 15 to file; payment of any tax owed is not extended

C. About June 15 for everything

D. No deadline at all

MAIN — Choose a filing method, meet deadlines, and avoid tax scams

Question 5 of 5 · Knowledge Check

How long does the IRS generally recommend keeping tax records?

A. At least 3 years after filing

B. 1 week

C. Until the refund arrives only

D. There is no reason to keep records

BACKWARD B1 · concept review — Deadlines and dates

Question 1 of 5 · Learn and Apply

LEARN

Deadlines that fall on a weekend or holiday generally move to the next business day.

If April 15 falls on a Saturday, when is the federal filing deadline generally moved to?

A. The previous Friday, April 13

B. April 30

C. The next business day, Monday

D. It stays Saturday

BACKWARD B1 · concept review — Deadlines and dates

Question 2 of 5 · Knowledge Check

How many months is a 6-month extension from April 15?

A. Three months, to about July 15th

B. One year

C. Six months, to about October 15

D. Two weeks

BACKWARD B1 · concept review — Deadlines and dates

Question 3 of 5 · Learn and Apply

LEARN

Count the days left in each month: January, February, March, then April.

Kayla receives her W-2 on January 28. How many days until April 15 in a non-leap year?

A. 105 days

B. 77 days

C. 45 days

D. 3 days

BACKWARD B1 · concept review — Deadlines and dates

Question 4 of 5 · Learn and Apply

LEARN

E-filing sends your return electronically through software or a preparer.

What does "e-file" mean?

A. Mailing paper forms

B. Calling the IRS to file over the phone

C. Emailing a photo of a W-2

D. Filing a tax return electronically

BACKWARD B1 · concept review — Deadlines and dates

Question 5 of 5 · Knowledge Check

Which is generally the fastest way to receive a refund?

A. E-file with direct deposit

B. Paper return with a mailed check

C. Paper return with direct deposit

D. Filing in December before the year ends

GO DEEPER 1 — Protecting your tax identity

Question 1 of 5 · Learn and Apply

LEARN

In tax-related identity theft, someone uses your Social Security number to file a fraudulent return and claim a refund. Filing early and using an IRS Identity Protection PIN help prevent it.

A thief files a return using Kayla's Social Security number to steal her refund. What is this called?

A. A tax credit claimed by mistake

B. An amended return

C. An audit

D. Tax-related identity theft

GO DEEPER 1 — Protecting your tax identity

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

An IP PIN is a six-digit number known only to you and the IRS that must appear on your return.

What does an IRS Identity Protection PIN (IP PIN) do?

A. It must be entered on the return, blocking others from filing with your SSN

B. It lowers your tax rate

C. It replaces your Social Security number

D. It speeds up refunds to any account

GO DEEPER 1 — Protecting your tax identity

Question 3 of 5 · Learn and Apply

LEARN

The IRS generally does not initiate contact by email, text, or social media to request personal or financial information.

An email "from the IRS" asks Kayla to click a link to claim a refund. What should she know?

A. The IRS always sends refunds by email links

B. She should reply with her bank details

C. The IRS does not start contact by email asking for personal information

D. Emails with logos are always real

GO DEEPER 1 — Protecting your tax identity

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

TIGTA investigates IRS impersonation scams; phishing emails can be forwarded to phishing@irs.gov.

Where can someone report an IRS impersonation scam?

A. The scammer's phone number

B. The Treasury Inspector General for Tax Administration (TIGTA)

C. A credit card company only

D. A social media post

GO DEEPER 1 — Protecting your tax identity

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

You are responsible for what is on your return, even if someone else prepares it. Choose preparers carefully and review your return before signing.

A paid preparer offers a larger refund if Kayla signs a blank return. What should she do?

A. Sign it to save time

B. Sign it if the preparer's fee is low

C. Sign it but keep a photo

D. Refuse; never sign a blank return

GO DEEPER 2 — State returns and amending mistakes

Question 1 of 5 · Learn and Apply

LEARN

States with income taxes have their own returns, with their own filing thresholds and deadlines.

Kayla lives and works in New Jersey and had state tax withheld. Which return(s) might she need to file?

A. Only the federal return

B. Only the New Jersey return

C. A federal Form 1040 and a New Jersey NJ-1040

D. No returns, as a full-time student who earns under $10,000

GO DEEPER 2 — State returns and amending mistakes

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Mistakes on a filed return are corrected with Form 1040-X, the amended return.

After filing, Kayla finds a second W-2 she forgot. What should she do?

A. File an amended return (Form 1040-X)

B. Ignore it

C. File a second original return to replace it

D. Mail the W-2 to her employer

GO DEEPER 2 — State returns and amending mistakes

Question 3 of 5 · Learn and Apply

LEARN

On an amended return, the extra tax is compared with any extra withholding.

The forgotten W-2 adds $1,200 of income and $90 of withholding. If her extra tax is $120, what is the net amount she owes on the amended return?

A. $30

B. $90

C. $120

D. $210

GO DEEPER 2 — State returns and amending mistakes

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

VITA sites offer free tax preparation by IRS-certified volunteers for eligible taxpayers.

Which free program offers in-person tax help for many low- and moderate-income taxpayers?

A. FDIC

B. VITA (Volunteer Income Tax Assistance)

C. FINRA

D. SIPC

GO DEEPER 2 — State returns and amending mistakes

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

A simple checklist prevents missing income or credits.

Before filing, which documents should Kayla gather?

A. Only her final pay stub of the year

B. Her credit card statements only

C. Nothing; the IRS has everything

D. Her W-2s, any 1099s, ID, and last year's return if she filed one

SET 71 · Renting and Leasing a Home

Finding a rental and avoiding rental scams

MAIN skill: Search for legitimate rental listings and recognize rental scams

Outcome FL.RENT.71 · National topic: Spending · NJSLS 9.1.12: PB, RM

Learning target: Compare housing options and recognize rental fraud

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Renting basics: landlords, tenants, and leases (5 questions)
  Why: Students need the basic vocabulary of renting before evaluating listings.
- B2 · Math link → G5-S22-M (Grade 5 5.NBT.B.7): Solve real-world problems with decimal operations
  Why: Comparing rentals adds rent, utilities, and fees.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Comparing rentals beyond the rent (5 questions)
- Go Deeper 2: Spotting and reporting rental scams (5 questions)

Practical skills beyond the standards: Comparing total monthly housing costs; Verifying rental listings

Content status: time-sensitive

Source: FTC — Rental listing scams include fake listings, requests to wire money or pay before seeing a unit, and owners who claim to be out of the country. https://consumer.ftc.gov/articles/rental-listing-scams

MAIN — Search for legitimate rental listings and recognize rental scams

Question 1 of 5 · Learn and Apply

LEARN

Rental scammers copy real listings or invent fake ones. Red flags: rent far below similar units, an owner who cannot meet in person, pressure to pay quickly, requests to wire money or use gift cards or payment apps, and requests for payment before you see the unit or sign a lease.

A listing offers a 2-bedroom apartment for $700 a month when similar ones nearby rent for $1,500. The "owner" is overseas and asks for a deposit by wire before anyone sees the unit. What is most likely happening?

A. A rare bargain that should be secured quickly

B. A normal practice for overseas landlords

C. A rental scam

D. A government housing program

MAIN — Search for legitimate rental listings and recognize rental scams

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Before paying, see the unit in person (or have someone you trust visit), meet the landlord or property manager, and check who owns the property, for example through local property records.

Which step BEST confirms that a listing is real before paying anything?

A. Visit the unit in person and verify the owner or manager

B. Ask the poster to send more photos of the unit before deciding

C. Pay a small deposit to hold it

D. Trust the listing because it is on a big website

MAIN — Search for legitimate rental listings and recognize rental scams

Question 3 of 5 · Learn and Apply

LEARN

Compare total monthly housing cost, not just rent: rent + utilities + parking + renters insurance + other fees.

Jen compares two apartments. A: rent $1,150, utilities included. B: rent $1,050, plus about $130 a month in utilities. Which costs less per month, and by how much?

A. B, by $100

B. A, by $30

C. B, by $30

D. They cost the same

MAIN — Search for legitimate rental listings and recognize rental scams

Question 4 of 5 · Knowledge Check

Which payment request is MOST likely a sign of a scam?

A. Paying an application fee with gift cards

B. Paying first month's rent by check after signing a lease

C. Paying a security deposit to a property management company with a receipt

D. Paying rent through the landlord's official online portal after signing

MAIN — Search for legitimate rental listings and recognize rental scams

Question 5 of 5 · Learn and Apply

LEARN

Application fees cover processing and background checks and are usually not refundable. Applying to many places adds up.

Jen pays $65 application fees at 4 apartments before being approved. What does she spend on applications?

A. $16.25

B. $65

C. $69

D. $260

BACKWARD B1 · concept review — Renting basics: landlords, tenants, and leases

Question 1 of 5 · Learn and Apply

LEARN

A landlord owns (or manages) a rental property. A tenant pays rent to live there. A lease is the contract that sets the terms.

In a rental, who is the TENANT?

A. The person who owns the building

B. The person who pays rent to live in the home

C. The bank that holds the mortgage on the building

D. The city housing inspector

BACKWARD B1 · concept review — Renting basics: landlords, tenants, and leases

Question 2 of 5 · Learn and Apply

LEARN

A lease is a legal agreement that states the rent, length of the rental, rules, and responsibilities of each side.

What is a lease?

A. A loan agreement that lets the tenant buy the apartment over time

B. A receipt for one month's rent

C. A contract between landlord and tenant setting the rental terms

D. Renters insurance for the apartment

BACKWARD B1 · concept review — Renting basics: landlords, tenants, and leases

Question 3 of 5 · Knowledge Check

Rent is $950 a month. What does a 12-month lease total in rent?

A. $950

B. $1,140

C. $9,500

D. $11,400

BACKWARD B1 · concept review — Renting basics: landlords, tenants, and leases
Question 4 of 5 · Learn and Apply

LEARN
Utilities, such as electricity, gas, water, and internet, may or may not be included in rent. Listings should say which are included.

Which cost is often NOT included in rent?

A. The right to live in the unit
B. Use of the kitchen inside the unit
C. Using the front door
D. Electricity

BACKWARD B1 · concept review — Renting basics: landlords, tenants, and leases
Question 5 of 5 · Knowledge Check

Why do landlords check rental applications?

A. To judge whether the applicant will pay and care for the home
B. To decide the applicant's rent based on income
C. To sell applicants' information
D. Because the law requires every landlord to approve everyone

GO DEEPER 1 — Comparing rentals beyond the rent

Question 1 of 5 · Learn and Apply

LEARN

Location affects costs: commuting, parking, and time.

Apartment C rents for $1,000 and is a 20-minute walk from work. Apartment D rents for $900 but requires a $120 monthly bus pass. Which costs less per month for housing plus commuting?

A. D, by $100

B. C, by $20

C. D, by $20

D. They cost the same

Question 2 of 5 · Learn and Apply

LEARN

Extra monthly fees, such as parking, pet rent, or amenity fees, add to yearly housing costs: yearly cost = monthly fee × 12.

A building charges $75 a month for parking. Over a 12-month lease, what does parking cost?

A. $75

B. $87

C. $750

D. $900

GO DEEPER 1 — Comparing rentals beyond the rent

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Asking about included utilities and extra fees before signing prevents surprise costs.

Which question should Jen ask before signing?

A. How many people applied before me?

B. Is the photo in the listing recent?

C. Which utilities and fees are included in the rent?

D. Will the landlord let me skip the security deposit?

GO DEEPER 1 — Comparing rentals beyond the rent

Question 4 of 5 · Learn and Apply

LEARN

Averaging seasonal bills gives a better monthly budget estimate.

Average utility bills at a unit are $90 in spring, $150 in summer, $180 in winter, and $100 in fall. What is the average monthly utility cost?

A. $90

B. $130

C. $180

D. $520

GO DEEPER 1 — Comparing rentals beyond the rent

Question 5 of 5 · Learn and Apply

LEARN

Roommates split rent and utilities, but a shared lease means shared responsibility.

Which choice is a reasonable way to lower rent costs?

A. Signing a lease you cannot afford and hoping for a raise

B. Paying rent with a cash advance

C. Skipping renters insurance to afford a nicer unit

D. Sharing a larger apartment with a roommate

GO DEEPER 2 — Spotting and reporting rental scams

Question 1 of 5 · Learn and Apply

LEARN

Scammers often promise to mail keys and avoid meeting in person.

A "landlord" says, "Send the deposit through a payment app and I'll mail you the keys." What should Jen do?

A. Send it, since apps are safe

B. Refuse and look for another listing

C. Send half to test it

D. Ask a friend to send the deposit instead

GO DEEPER 2 — Spotting and reporting rental scams

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Local governments publish property ownership records.

How can Jen check who owns a property?

A. Ask the person posting the listing to promise

B. Look at the listing's photos

C. Check a social media profile

D. Search local property tax or deed records

GO DEEPER 2 — Spotting and reporting rental scams

Question 3 of 5 · Learn and Apply

LEARN

A reverse image search can reveal photos copied from other listings.

Jen finds the same photos on another listing with a different address and price. What does that suggest?

A. One listing may be a copied scam

B. Both are definitely real

C. The photos are from a model unit, so both are guaranteed real

D. Both listings are fine since photos can be reused

GO DEEPER 2 — Spotting and reporting rental scams

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Reporting helps authorities and websites remove scams.

Where can Jen report a rental scam?

A. The scammer's email address

B. Her school

C. ReportFraud.ftc.gov and the site where it was listed

D. A credit bureau

GO DEEPER 2 — Spotting and reporting rental scams

Question 5 of 5 · Knowledge Check

Which listing detail is LEAST concerning?

A. Rent far below the area average

B. An owner who is "out of the country"

C. A manager who shows the unit and a lease to review

D. Pressure to pay today to hold it

SET 72 · Renting and Leasing a Home

Rental applications and affordability

MAIN skill: Estimate affordable rent and prepare a rental application

Outcome FL.RENT.72 · National topic: Spending · NJSLS 9.1.12: PB, CP

Learning target: Evaluate housing affordability and the rental application process

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Percents of income for housing (5 questions)
  Why: Affordability rules are percents and multiples of income.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Affordability guidelines are percents of income.
- B3 · Math link → G6-S52-M (Grade 6 6.EE.B.7): Solve one-step equations of the form px = q
  Why: Finding maximum rent from "40 × rent ≤ income" solves a one-step equation.

After 5 of 5 correct, Go Deeper unlocks (a chain):

MAIN — Estimate affordable rent and prepare a rental application

Question 1 of 5 · Learn and Apply

LEARN

A common affordability guideline: rent of no more than about 30% of gross (before-tax) monthly income. It is a rule of thumb, not a law; your full budget matters too.

A common guideline suggests spending no more than 30% of gross monthly income on rent. Mo earns $3,200 a month before taxes. What is the most rent under that guideline?

A. $96

B. $960

C. $1,067

D. $3,200

MAIN — Estimate affordable rent and prepare a rental application

Question 2 of 5 · Learn and Apply

LEARN

Landlords often set income requirements, such as "yearly income at least 40× the monthly rent" or "monthly income at least 3× the rent."

Some landlords require yearly gross income of at least 40 times the monthly rent. Rent is $1,200. What yearly income is required?

A. $1,200

B. $14,400

C. $30,000

D. $48,000

MAIN — Estimate affordable rent and prepare a rental application

Question 3 of 5 · Learn and Apply

LEARN

To find the maximum rent under an income rule, divide yearly income by the multiple.

Mo earns $36,000 a year. Under a "40 times the rent" rule, what is the highest rent he qualifies for?

A. $900

B. $1,200

C. $1,440

D. $3,000

MAIN — Estimate affordable rent and prepare a rental application

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Applications usually require photo ID, proof of income (pay stubs or an offer letter), past landlord references, and consent to a credit and background check. An application fee is common.

Which documents does a rental application commonly ask for?

A. A high school diploma and report cards

B. ID, proof of income, rental history, and credit consent

C. A car title and insurance card

D. A list of friends' phone numbers

MAIN — Estimate affordable rent and prepare a rental application

Question 5 of 5 · Learn and Apply

LEARN

A guarantor agrees to pay the rent if the tenant does not. Deposit limits depend on state law.

Mo has no rental history and a thin credit file. What might a landlord ask for?

A. Nothing; landlords cannot ask for anything else

B. Proof that he has never borrowed money

C. His Social Security card mailed in

D. A guarantor (cosigner) or a larger deposit, where legal

LEARN

Percent of an amount = amount × rate as a decimal.

What is 30% of $2,500?

A. $75

B. $750

C. $833

D. $7,500

BACKWARD B1 · concept review — Percents of income for housing

Question 2 of 5 · Learn and Apply

LEARN

Percent of income = rent ÷ income × 100.

$900 rent on $3,000 monthly income is what percent?

A. 3.3%

B. 30%

C. 33%

D. 90%

BACKWARD B1 · concept review — Percents of income for housing

Question 3 of 5 · Knowledge Check

Monthly income is $2,800. What is yearly income?

A. $233

B. $2,800

C. $28,000

D. $33,600

BACKWARD B1 · concept review — Percents of income for housing

Question 4 of 5 · Learn and Apply

LEARN

Under a "40 times rent" rule, the most rent = yearly income ÷ 40.

Yearly income is $33,600. Dividing by 40 gives what monthly rent limit?

A. $84

B. $840

C. $2,800

D. $1,344,000

BACKWARD B1 · concept review — Percents of income for housing

Question 5 of 5 · Knowledge Check

Why is rent above 30% of income often called "cost-burdened"?

A. Less money remains for other needs and saving

B. Landlords charge more to such tenants

C. It lowers credit scores automatically each month

D. It is illegal to rent above 30%

GO DEEPER 1 — Budgeting for the first apartment

Question 1 of 5 · Learn and Apply

LEARN

Move-in costs often include first month's rent, a security deposit, fees, and moving expenses, all due before or at move-in.

Move-in costs: first month's rent $1,000, security deposit $1,500, and a $50 application fee. How much cash does Mo need?

A. $1,000

B. $1,550

C. $2,500

D. $2,550

GO DEEPER 1 — Budgeting for the first apartment

Question 2 of 5 · Learn and Apply

LEARN

Months needed = amount needed ÷ monthly saving, rounded up to a whole month.

Mo saves $300 a month toward $2,550 of move-in costs. How many months until he has enough (rounded up)?

A. 9 months

B. 8 months

C. 85 months

D. 3 months

GO DEEPER 1 — Budgeting for the first apartment

Question 3 of 5 · Learn and Apply

LEARN

First apartments often need furniture, kitchen basics, and utility deposits or setup fees.

Which expense is often forgotten in a first apartment budget?

A. Rent

B. The lease itself

C. Rent for the first month, which the landlord already listed

D. Furniture, kitchen supplies, and utility setup fees

GO DEEPER 1 — Budgeting for the first apartment

Question 4 of 5 · Learn and Apply

LEARN

Housing share = total housing costs ÷ income × 100.

Mo's take-home pay is $2,500. Rent is $900, utilities $120, renters insurance $15, and internet $50. What share of take-home pay do these housing costs use (nearest whole percent)?

A. 30%

B. 36%

C. 43%

D. 57%

GO DEEPER 1 — Budgeting for the first apartment

Question 5 of 5 · Knowledge Check

Which choice would most lower Mo's housing share?

A. Adding cable TV

B. Finding a roommate to split rent and utilities

C. Taking a bigger unit so a future roommate can join later

D. Paying rent with a credit card

GO DEEPER 2 — Credit checks and fair housing

Question 1 of 5 · Learn and Apply

LEARN

Landlords may check credit reports (with permission). Some checks are recorded as inquiries.

A landlord runs a credit check on Mo. Does this affect his credit score?

A. It erases his credit history

B. It always drops his score by 100 points

C. It may appear as an inquiry; it does not reveal income

D. It shows his bank balances and pay to the landlord directly

GO DEEPER 2 — Credit checks and fair housing

Question 2 of 5 · Learn and Apply

LEARN

The Fair Housing Act prohibits housing discrimination based on race, color, national origin, religion, sex, familial status, and disability. Some exemptions exist, such as certain senior housing.

A landlord refuses to rent to a family because they have young children. Under the federal Fair Housing Act, this is…

A. legal in every building

B. illegal discrimination based on familial status

C. allowed whenever the landlord prefers a quiet building

D. required by fire codes

GO DEEPER 2 — Credit checks and fair housing

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

HUD and state agencies enforce fair housing laws.

Where can someone report housing discrimination?

A. The IRS

B. The credit bureau that reported his score

C. HUD or the state civil rights agency

D. The landlord's friend

GO DEEPER 2 — Credit checks and fair housing

Question 4 of 5 · Learn and Apply

LEARN

When a landlord takes adverse action based on a consumer report, the applicant must be told and can get a free copy of the report.

A landlord denies Mo because of information in a tenant screening report. What right does Mo have under federal law?

A. None at all

B. To have the landlord approve him anyway

C. To sue the landlord for checking

D. To be told and to get a free copy to dispute errors

GO DEEPER 2 — Credit checks and fair housing

Question 5 of 5 · Learn and Apply

LEARN

Under a "monthly income at least 3× rent" rule, the most rent = monthly income ÷ 3.

Mo earns $2,800 a month. A landlord requires monthly income of 3 times the rent. What is the highest rent he qualifies for?

A. $700

B. $933.33

C. $2,800

D. $8,400

SET 73 · Renting and Leasing a Home

Reading a lease and security deposits

MAIN skill: Read key lease terms and apply security deposit rules

Outcome FL.RENT.73 · National topic: Spending · NJSLS 9.1.12: PB

Learning target: Interpret a lease and explain tenant financial responsibilities including security deposits

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Reading contract terms (5 questions)
  - Why: Lease questions require reading specific terms and applying them.
- B2 · Math link → G6-S19-M (Grade 6 6.NS.B.3): Multiply multi-digit decimals
  - Why: Deposit caps and fees multiply rent by factors like 1.5.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Move-in and move-out inspections (5 questions)
- Go Deeper 2: Breaking a lease, renewals, and roommates (5 questions)

Practical skills beyond the standards: Reading a lease section by section; Move-in and move-out documentation

Content status: time-sensitive

Source: New Jersey Department of Community Affairs (Truth in Renting) — In New Jersey, a security deposit may not exceed 1.5 times one month's rent, and the landlord must return it with interest, less itemized charges, within 30 days after the tenancy ends. https://www.nj.gov/dca/codes/publications/pdf_lti/t_i_r.pdf

MAIN — Read key lease terms and apply security deposit rules

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

A lease lists the rent, due date, grace period, late fees, length of the lease, who pays which utilities, rules (pets, guests, noise), maintenance duties, renewal terms, and what happens if you leave early. Read every section before signing.

A lease says: "Rent $1,100 due on the 1st. Late fee $50 if not received by the 5th." Jen pays on the 7th. What does she owe for that month?

A. $1,050

B. $1,100

C. $1,150

D. $1,200

MAIN — Read key lease terms and apply security deposit rules

Question 2 of 5 · Learn and Apply

LEARN

A security deposit protects the landlord against unpaid rent or damage beyond normal wear and tear. It is generally returned, minus allowed deductions, after the lease ends. State laws limit amounts and set return deadlines.

A security deposit is…

A. money held to cover unpaid rent or damage beyond normal wear

B. a fee the landlord keeps no matter what condition the unit is in

C. the last month's rent, automatically

D. a payment for the landlord's insurance

MAIN — Read key lease terms and apply security deposit rules

Question 3 of 5 · Learn and Apply

LEARN

New Jersey law caps security deposits at 1.5 months' rent. Other states have different limits.

In New Jersey, a security deposit may not exceed 1.5 times one month's rent. Rent is $1,200. What is the largest deposit allowed?

A. $600

B. $1,200

C. $1,800

D. $2,400

MAIN — Read key lease terms and apply security deposit rules

Question 4 of 5 · Learn and Apply

LEARN

Normal wear and tear (small nail holes, faded paint) is generally not deducted. Damage beyond that can be. New Jersey requires the landlord to return the deposit with interest, less itemized charges, within 30 days after the lease ends.

Jen's lease ends. Her $1,500 deposit has $200 deducted for a broken door and $0 for small nail holes. In New Jersey, about how much should she get back, and by when?

A. $1,500 within one year

B. $0, because deposits are never returned

C. $1,300 (plus any interest) within 30 days

D. $1,300 whenever the landlord chooses to pay

MAIN — Read key lease terms and apply security deposit rules

Question 5 of 5 · Knowledge Check · Practical how-to

Which lease term should Jen check before getting a pet?

A. The renters insurance deductible only

B. The pet policy and any pet deposit or monthly pet fee

C. Only the monthly rent, since pets never change lease terms

D. The parking rules for guests

BACKWARD B1 · concept review — Reading contract terms

Question 1 of 5 · Learn and Apply

LEARN

The lease term is the length of the agreement.

A lease runs from August 1 to July 31. How long is it?

A. 6 months

B. 11 months

C. 24 months

D. 12 months

BACKWARD B1 · concept review — Reading contract terms

Question 2 of 5 · Learn and Apply

LEARN

Leases assign each bill to the landlord or tenant.

"Tenant pays electricity and gas; landlord pays water." Who pays the water bill?

A. The landlord

B. The tenant who lives there

C. The city

D. Neither

BACKWARD B1 · concept review — Reading contract terms

Question 3 of 5 · Learn and Apply

LEARN

A grace period is a short time after a due date during which payment is still accepted without a late fee.

A "grace period" for rent means...

A. days after the due date before a late fee applies

B. a discount for paying early

C. a free month of rent

D. a period at the start of the lease when rent is not owed

BACKWARD B1 · concept review — Reading contract terms

Question 4 of 5 · Knowledge Check

1.5 times $1,000 is...

A. $150

B. $1,005

C. $1,500

D. $2,500

BACKWARD B1 · concept review — Reading contract terms

Question 5 of 5 · Knowledge Check · Practical how-to

Why should Jen read a lease BEFORE signing?

A. Leases can be changed by the tenant alone later

B. Signing makes her legally bound to its terms

C. Only the landlord is bound by a lease

D. Leases are not legal documents

GO DEEPER 1 — Move-in and move-out inspections

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

A move-in checklist and dated photos protect your deposit by recording existing damage.

Why should Jen document the unit's condition with dated photos at move-in?

A. To post them online for future renters

B. To ask the landlord to lower the rent right away

C. Because photos replace the need for a lease

D. To show which damage existed before she moved in

GO DEEPER 1 — Move-in and move-out inspections

Question 2 of 5 · Learn and Apply

LEARN

Deductions generally cover damage beyond normal wear and tear, plus unpaid rent.

Which charge is MOST likely to be allowed from a deposit?

A. Small nail holes from hanging pictures

B. Faded paint after three years

C. Replacing a carpet ruined by a pet

D. Minor scuffs on floors

GO DEEPER 1 — Move-in and move-out inspections

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Landlords need a forwarding address to return deposits and statements.

At move-out, Jen cleans, returns keys, and gives a forwarding address. Why the address?

A. So the landlord can mail her future bills

B. So the landlord can send the deposit and itemized list

C. Because a forwarding address raises the deposit refund

D. To end her renters insurance

GO DEEPER 1 — Move-in and move-out inspections

Question 4 of 5 · Learn and Apply

LEARN

New Jersey requires deposits to be held in an interest-bearing account, with interest credited to the tenant.

Jen's deposit of $1,800 earned 1% interest for one year in New Jersey. About how much interest is owed?

A. $1.80

B. $18

C. $180

D. $1,818

GO DEEPER 1 — Move-in and move-out inspections

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Tenants can pursue unreturned deposits; New Jersey law provides remedies when deposits are wrongfully withheld.

A landlord keeps a deposit without explanation past the legal deadline. What can a New Jersey tenant do?

A. Nothing

B. Post a bad review and wait

C. Take the landlord's property

D. Request it in writing, then use small claims court if needed

GO DEEPER 2 — Breaking a lease, renewals, and roommates

Question 1 of 5 · Learn and Apply

LEARN

Leaving early can mean paying rent until a new tenant is found or paying an early-termination fee, depending on the lease and state law.

Jen must move 4 months before her 12-month lease ends. Rent is $1,100. If the lease makes her liable for remaining rent until the unit is re-rented, and it takes 2 months to re-rent, how much might she owe?

A. $0

B. $1,100

C. $2,200

D. $4,400

GO DEEPER 2 — Breaking a lease, renewals, and roommates

Question 2 of 5 · Learn and Apply

LEARN

Leases often require advance written notice to end or renew.

Jen's lease renews automatically unless she gives 60 days' written notice. Her lease ends June 30. By about when must she give notice to leave?

A. Early May

B. June 29

C. July 15

D. There is no deadline

GO DEEPER 2 — Breaking a lease, renewals, and roommates

Question 3 of 5 · Learn and Apply

LEARN

When roommates sign the same lease, each is often responsible for the full rent ("joint and several" liability).

Two roommates sign one lease for $1,600 rent. One stops paying. What can the landlord usually do?

A. Collect only half from each roommate, no matter what

B. Collect from the paying roommate only her half

C. Hold either roommate responsible for the full rent

D. Lower the rent to $800

GO DEEPER 2 — Breaking a lease, renewals, and roommates

Question 4 of 5 · Learn and Apply

LEARN

Percent change = (new − old) ÷ old × 100.

A landlord offers a renewal with rent rising from $1,100 to $1,155. What is the percent increase?

A. 4.8%

B. 5%

C. 10%

D. 55%

GO DEEPER 2 — Breaking a lease, renewals, and roommates

Question 5 of 5 · Learn and Apply

LEARN

Many leases require the landlord's written permission to sublet.

Subletting means...

A. the landlord selling the building

B. paying rent late

C. renting your unit to someone else while still the tenant

D. breaking the lease with no notice

SET 74 · Renting and Leasing a Home

Tenant responsibilities, rights, and renters insurance

MAIN skill: Explain tenant duties and rights and evaluate renters insurance

Outcome FL.RENT.74 · National topic: Managing Risk · NJSLS 9.1.12: RM, PB

Learning target: Explain tenant responsibilities and the purpose of renters insurance

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Premiums and deductibles (5 questions)
  - Why: Renters insurance questions depend on distinguishing a premium from a deductible.
- B2 · Math link → G5-S22-M (Grade 5 5.NBT.B.7): Solve real-world problems with decimal operations
  - Why: Claim payments subtract deductibles; premiums multiply by months.

MAIN — Explain tenant duties and rights and evaluate renters insurance

Question 1 of 5 · Learn and Apply

LEARN

A landlord's insurance covers the building, not tenants' belongings. Renters insurance covers your personal property (for theft, fire, and other listed causes) and liability if someone is injured in your home or you damage others' property. It often costs about $10–$25 a month.

Jen's belongings are stolen from her apartment. The landlord has building insurance. Which policy covers HER belongings?

A. Her own renters insurance policy

B. The landlord's building insurance

C. The city's emergency fund

D. Her car insurance, for anything inside a home

MAIN — Explain tenant duties and rights and evaluate renters insurance

Question 2 of 5 · Learn and Apply

LEARN

A premium is what you pay for the policy. A deductible is the amount you pay toward a claim before insurance pays the rest.

Jen's renters policy costs $16 a month with a $500 deductible. A fire destroys $4,000 of her belongings (covered). How much does the insurer pay?

A. $500

B. $3,500

C. $3,984

D. $4,000

MAIN — Explain tenant duties and rights and evaluate renters insurance

Question 3 of 5 · Learn and Apply

LEARN

Tenants generally must pay rent on time, keep the unit clean, avoid damage, follow the lease, and report repairs. Landlords generally must keep the unit safe and livable (heat, water, structural repairs) and follow notice rules.

Which is usually the TENANT's responsibility?

A. Replacing the building's roof

B. Fixing a broken furnace or a leaking water heater herself

C. Paying the building's property tax

D. Keeping the unit clean and reporting problems promptly

MAIN — Explain tenant duties and rights and evaluate renters insurance

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Landlords must keep homes habitable, including heat. Tenants should report problems in writing and keep records. State law sets remedies if repairs are not made.

In winter, Jen's heat stops working. What should she do FIRST?

A. Stop paying rent immediately

B. Notify the landlord in writing and keep a copy

C. Hire a contractor and deduct any cost she chooses

D. Wait until spring

MAIN — Explain tenant duties and rights and evaluate renters insurance

Question 5 of 5 · Knowledge Check

Over a year, how much does a $16-per-month renters policy cost?

A. $16

B. $160

C. $192

D. $1,920

BACKWARD B1 · concept review — Premiums and deductibles

Question 1 of 5 · Learn and Apply

LEARN

The premium is the price of insurance, paid monthly or yearly. The deductible is what you pay out of pocket on a claim before insurance pays.

What is an insurance PREMIUM?

A. The amount paid regularly to keep the policy

B. The amount the policyholder pays toward each claim first

C. The maximum the insurer pays

D. A refund from the insurer

BACKWARD B1 · concept review — Premiums and deductibles

Question 2 of 5 · Knowledge Check

What is a DEDUCTIBLE?

A. The monthly cost of the policy

B. The most the insurer will pay

C. The amount you pay on a claim before insurance pays

D. A bonus the insurer pays you when you file no claims

BACKWARD B1 · concept review — Premiums and deductibles

Question 3 of 5 · Learn and Apply

LEARN

Insurance pays the loss minus the deductible.

A covered $1,200 loss with a $250 deductible is paid how?

A. Insurance pays $1,200

B. You pay $250; insurance pays $950

C. You pay $950; insurance pays $250

D. You pay $1,200

BACKWARD B1 · concept review — Premiums and deductibles

Question 4 of 5 · Learn and Apply

LEARN

Taking on more cost per claim (higher deductible) usually lowers the premium.

Which choice usually LOWERS the premium?

A. Choosing a much lower deductible

B. Adding more coverage

C. Filing more claims

D. Choosing a higher deductible

Question 5 of 5 · Knowledge Check

Which loss is MOST likely covered by renters insurance?

A. A laptop stolen in a break-in

B. Wear on old furniture over years

C. The building's cracked foundation

D. A planned vacation

GO DEEPER 1 — Choosing renters insurance coverage

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

A home inventory, a list of belongings with values, helps choose coverage and file claims.

Jen lists her belongings: electronics $2,500, furniture $1,800, clothes $1,500, other $1,200. How much personal property coverage does she need at minimum?

A. $1,800

B. $2,500

C. $5,800

D. $7,000

GO DEEPER 1 — Choosing renters insurance coverage

Question 2 of 5 · Learn and Apply

LEARN

Policies may pay replacement cost (new item) or actual cash value (replacement cost minus depreciation). Replacement cost policies usually cost more.

"Replacement cost" coverage pays to replace items with new ones. "Actual cash value" pays...

A. double the original price, to cover the cost of shopping

B. what the items were worth after depreciation

C. the item's original price

D. the price of a used item of any age

GO DEEPER 1 — Choosing renters insurance coverage

Question 3 of 5 · Learn and Apply

LEARN

Actual cash value = replacement cost − depreciation.

A 4-year-old $1,000 TV has lost 60% of its value. Under actual cash value, before the deductible, what is it worth?

A. $400

B. $600

C. $940

D. $1,000

GO DEEPER 1 — Choosing renters insurance coverage

Question 4 of 5 · Learn and Apply

LEARN

Liability coverage helps pay if you are legally responsible for injuring someone or damaging their property.

A guest slips in Jen's apartment and is hurt. Which part of renters insurance may help?

A. Personal property coverage

B. Loss-of-use coverage

C. Nothing; insurance never covers injuries

D. Liability coverage

GO DEEPER 1 — Choosing renters insurance coverage

Question 5 of 5 · Learn and Apply

LEARN

Loss-of-use coverage pays extra living costs when a covered event makes your home unlivable.

After a covered fire, Jen must stay in a hotel for 2 weeks. Which coverage may help pay?

A. Liability coverage for injuries to guests

B. The landlord's security deposit

C. Loss of use (additional living expenses)

D. Health insurance

GO DEEPER 2 — Tenant rights and when to get help

Question 1 of 5 · Learn and Apply

LEARN

In most states, including New Jersey, landlords must go through the court eviction process; lockouts and utility shutoffs to force tenants out are generally illegal.

Can a landlord in most states change the locks to force a tenant out without a court order?

A. Yes, any time the rent is even one day past due

B. No; self-help evictions are generally illegal

C. Yes, with one day's notice

D. Yes, if the lease allows it

GO DEEPER 2 — Tenant rights and when to get help

Question 2 of 5 · Learn and Apply

LEARN

Leases and state or local laws usually require reasonable notice before non-emergency entry.

A landlord wants to enter Jen's apartment for a non-emergency repair. What is generally expected?

A. No notice at any time

B. A full month's written notice before every visit, even emergencies

C. Reasonable advance notice, as set by law or the lease

D. Permission from the city

GO DEEPER 2 — Tenant rights and when to get help

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

New Jersey publishes a "Truth in Renting" guide explaining tenant and landlord rights; landlords of most rental units must give tenants a copy.

Where can a New Jersey tenant learn about rights and responsibilities?

A. A national rental website's general tips page online

B. The landlord's own rules sheet

C. A national renters insurance ad

D. New Jersey's official "Truth in Renting" guide

Question 1 of 5 · Learn and Apply

LEARN

A mortgage is a loan used to buy a home. The home is collateral: if the borrower does not repay, the lender can foreclose (take and sell the home). Mortgages usually last 15 or 30 years and are repaid with monthly payments of principal and interest.

What is a mortgage?

A. A monthly rent payment to a landlord

B. Insurance that protects a home and its contents from fire

C. A loan to buy a home, with the home as collateral

D. A savings account for a down payment

MAIN — Compare renting and owning and explain the parts of a mortgage

Question 2 of 5 · Learn and Apply

LEARN

The down payment is the part of the price paid up front in cash. The rest is borrowed: loan (principal) = price − down payment.

The Lees buy a $300,000 home with a 20% down payment. How much do they borrow?

A. $60,000

B. $240,000

C. $300,000

D. $360,000

MAIN — Compare renting and owning and explain the parts of a mortgage

Question 3 of 5 · Learn and Apply

LEARN

Owning can build equity, the part of the home you own (value − mortgage balance), and gives stability and control. Renting offers flexibility and fewer responsibilities: landlords handle major repairs and you can move more easily.

Which is an advantage of OWNING compared with renting?

A. No repair or maintenance costs

B. Payments can build equity (ownership) over time

C. No property taxes

D. It is easier to move on short notice when owning

MAIN — Compare renting and owning and explain the parts of a mortgage

Question 4 of 5 · Learn and Apply

LEARN

Equity = home value − mortgage balance.

A home is worth $320,000, and the mortgage balance is $230,000. What is the owner's equity?

A. $90,000

B. $230,000

C. $320,000

D. $550,000

MAIN — Compare renting and owning and explain the parts of a mortgage

Question 5 of 5 · Knowledge Check

Which situation favors RENTING over buying?

A. Expecting to move for a new job within two years

B. Planning to stay in one town for 15 years

C. Having saved a large down payment and emergency fund

D. Wanting to renovate freely

BACKWARD B1 · concept review — Principal, interest, and collateral in home loans

Question 1 of 5 · Learn and Apply

LEARN

Principal is the amount borrowed. Interest is the cost of borrowing. Collateral is property the lender can take if the loan is not repaid.

The Lees buy a $300,000 home with a $60,000 down payment and borrow the rest. What is the principal of their mortgage?

A. $60,000

B. $240,000

C. $300,000

D. $360,000

BACKWARD B1 · concept review — Principal, interest, and collateral in home loans

Question 2 of 5 · Knowledge Check

What is the collateral for a mortgage?

A. The home being bought

B. The buyer's car

C. The buyer's savings account

D. The buyer's future salary

BACKWARD B1 · concept review — Principal, interest, and collateral in home loans

Question 3 of 5 · Learn and Apply

LEARN

Foreclosure is the legal process by which a lender takes a home after the borrower stops paying.

What can a lender do if a mortgage is not repaid?

A. Forgive the loan automatically

B. Take the borrower's retirement account

C. Raise the interest rate on a fixed loan

D. Foreclose and sell the home

BACKWARD B1 · concept review — Principal, interest, and collateral in home loans

Question 4 of 5 · Knowledge Check

20% of $250,000 is...

A. $5,000

B. $50,000

C. $200,000

D. $500,000

BACKWARD B1 · concept review — Principal, interest, and collateral in home loans

Question 5 of 5 · Knowledge Check

Which word means the part of a home you truly own?

A. Escrow

B. Premium

C. Equity

D. Lien

GO DEEPER 1 — Down payments and their effects

Question 1 of 5 · Learn and Apply

LEARN

A smaller down payment means a larger loan, usually higher payments and more interest, and often mortgage insurance.

With 10% down on a $300,000 home, how much is borrowed?

A. $30,000

B. $240,000

C. $270,000

D. $330,000

GO DEEPER 1 — Down payments and their effects

Question 2 of 5 · Learn and Apply

LEARN

The extra monthly cost of borrowing more = larger payment − smaller payment.

At 6.5% for 30 years, a $240,000 loan has a $1,516.96 payment and a $270,000 loan has a $1,706.58 payment. How much more per month does the smaller down payment cost?

A. $170.66

B. $189.62

C. $1,706.58

D. $30,000

GO DEEPER 1 — Down payments and their effects

Question 3 of 5 · Learn and Apply

LEARN

Low-down-payment programs make buying possible sooner but raise costs.

Some loan programs allow down payments as low as 3–3.5%. What is a trade-off?

A. A smaller loan, because the bank covers the missing down payment

B. A larger loan, higher payments, and usually mortgage insurance

C. No closing costs are charged

D. Property taxes disappear

GO DEEPER 1 — Down payments and their effects

Question 4 of 5 · Learn and Apply

LEARN

Months to save = goal ÷ monthly saving.

The Lees want 20% down on a $300,000 home and save $1,000 a month. Starting from $0, how many months to save the down payment?

A. 20 months

B. 300 months

C. 60 months

D. 6 months

GO DEEPER 1 — Down payments and their effects

Question 5 of 5 · Learn and Apply

LEARN

Buyers usually need cash for closing costs and should keep an emergency reserve.

Besides the down payment, what other cash do buyers usually need at closing?

A. Closing costs and reserves

B. The full purchase price in cash

C. Nothing else

D. A year of property taxes only

GO DEEPER 2 — The true cost of renting versus owning

Question 1 of 5 · Learn and Apply

LEARN

Part of a mortgage payment (principal) builds equity, which is like saving. Comparing renting and owning fairly separates costs that are spent from money that builds ownership.

Rent is $1,800 a month. An owner's total monthly cost is $2,400 (mortgage, tax, insurance, upkeep), of which $500 is principal that builds equity. What is the owner's monthly cost NOT counting principal?

A. $500

B. $1,800

C. $1,900

D. $2,400

GO DEEPER 2 — The true cost of renting versus owning

Question 2 of 5 · Learn and Apply

LEARN

Selling a home involves costs such as agent commissions, which have often been around 5–6% but are negotiable.

Selling a $300,000 home with 6% agent commissions costs how much in commissions?

A. $1,800

B. $6,000

C. $18,000

D. $180,000

GO DEEPER 2 — The true cost of renting versus owning

Question 3 of 5 · Learn and Apply

LEARN

Transaction costs at purchase and sale are large compared with the equity built in a short time.

Why can buying be costly for someone who sells after only two years?

A. Homes always lose value during their first two years

B. Buying and selling costs may exceed equity gained

C. Mortgages cannot be paid off early

D. Owners pay no interest early in the loan

GO DEEPER 2 — The true cost of renting versus owning

Question 4 of 5 · Learn and Apply

LEARN

Renting vs owning depends on many factors; neither is always better.

A renter invests the $600 a month an owner would spend extra. What matters for which option builds more wealth?

A. Only the rent amount

B. Only the mortgage rate

C. Neither renting nor owning can ever build any wealth

D. Investment returns, home price changes, and costs

GO DEEPER 2 — The true cost of renting versus owning

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Rent-vs-buy calculators combine prices, rates, taxes, and time.

Which tool helps compare renting and buying for a specific situation?

A. A mortgage payment calculator alone

B. A rent-versus-buy calculator with local costs

C. A tax refund estimator from a tax-filing website

D. A home value estimate for one house

SET 76 · Mortgages and Homeownership

Mortgage payments and loan terms

MAIN skill: Compare monthly payments and total interest for different mortgage terms and rates

Outcome FL.HOME.76 · National topic: Managing Credit · NJSLS 9.1.12: CDM

Learning target: Compare mortgage terms, rates, and total costs

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Payments times months (5 questions)
  - Why: Mortgage totals are payment × number of payments; students must count months correctly.
- B2 · Math link → G6-S19-M (Grade 6 6.NS.B.3): Multiply multi-digit decimals
  - Why: Totals multiply a decimal payment by the number of payments.
- B3 · Math link → G7-S25-M (Grade 7 7.NS.A.3): Solve real-world problems with the four operations on rational numbers
  - Why: Comparing loans subtracts and multiplies money amounts.

After 5 of 5 correct, Go Deeper unlocks (a chain):

MAIN — Compare monthly payments and total interest for different mortgage terms and rates

Question 1 of 5 · Learn and Apply

LEARN

Total paid on a mortgage = monthly payment × number of payments. Total interest = total paid − amount borrowed. On long loans, interest can exceed the original loan.

A $240,000 mortgage at 6.5% for 30 years has a principal-and-interest payment of $1,516.96. What is the total of all 360 payments?

A. $18,203.52

B. $240,000.00

C. $255,600.00

D. $546,105.60

MAIN — Compare monthly payments and total interest for different mortgage terms and rates

Question 2 of 5 · Knowledge Check

A $240,000 loan's 360 monthly payments total $546,105.60. How much interest is paid over 30 years?

A. $15,600.00

B. $240,000.00

C. $306,105.60

D. $546,105.60

MAIN — Compare monthly payments and total interest for different mortgage terms and rates

Question 3 of 5 · Learn and Apply

LEARN

Shorter terms have higher monthly payments but much less total interest, and often lower rates.

A $240,000 loan at 6.0% for 15 years has a $2,025.26 payment, totaling $364,546.80. Compared with the 30-year loan ($306,105.60 of interest), how much interest does the 15-year loan save?

A. $508.30

B. $124,546.80

C. $181,558.80

D. $306,105.60

MAIN — Compare monthly payments and total interest for different mortgage terms and rates

Question 4 of 5 · Knowledge Check

Why might a buyer choose the 30-year loan despite its higher total interest?

A. It always has a lower interest rate than a 15-year loan

B. It is paid off sooner

C. Its lower monthly payment is easier to afford

D. It has lower total interest because payments are smaller

MAIN — Compare monthly payments and total interest for different mortgage terms and rates

Question 5 of 5 · Learn and Apply

LEARN

Small rate differences change monthly payments and, over many years, total interest a lot.

A $200,000, 30-year loan costs $1,330.60 a month at 7% and $1,199.10 at 6%. How much does the 1-point lower rate save per month?

A. $13.15

B. $131.50

C. $1,199.10

D. $2,000.00

BACKWARD B1 · concept review — Payments times months

Question 1 of 5 · Learn and Apply

LEARN

Monthly payments = 12 × years.

How many monthly payments are in a 30-year mortgage?

A. 30

B. 300

C. 360

D. 3,600

BACKWARD B1 · concept review — Payments times months

Question 2 of 5 · Knowledge Check

How many monthly payments are in a 15-year mortgage?

A. 15

B. 150

C. 180

D. 360

BACKWARD B1 · concept review — Payments times months

Question 3 of 5 · Learn and Apply

LEARN

Total paid = payment × number of payments.

A payment of $1,000 for 180 months totals...

A. $1,180

B. $18,000

C. $180,000

D. $1,800,000

BACKWARD B1 · concept review — Payments times months

Question 4 of 5 · Learn and Apply

LEARN

Interest = total paid − amount borrowed.

Borrowed $150,000; total paid $250,000. What was the interest?

A. $100,000

B. $150,000

C. $250,000

D. $400,000

BACKWARD B1 · concept review — Payments times months

Question 5 of 5 · Learn and Apply

LEARN

Repaying the same amount in fewer months means larger payments.

Which usually has the HIGHER monthly payment for the same loan amount and rate?

A. A 15-year loan

B. A 30-year loan

C. They are equal

D. It depends only on the down payment

GO DEEPER 1 — Using the mortgage payment formula

Question 1 of 5 · Learn and Apply

LEARN

Monthly mortgage payments use the same formula as other installment loans, with the monthly rate r = APR ÷ 12 and n = number of monthly payments.

The payment formula is M = P · r ÷ (1 − (1 + r)^(−n)). For a 30-year loan at 6.5% APR, what are r and n?

A. r = 0.065; n = 30

B. r = 6.5; n = 360

C. r = 0.005417; n = 30

D. r = 0.065 ÷ 12 ≈ 0.005417; n = 360

GO DEEPER 1 — Using the mortgage payment formula

Question 2 of 5 · Learn and Apply

LEARN

Evaluate the formula with a calculator: find r = APR ÷ 12 and n = 360, compute (1 + r)^(−n), then the payment.

Using the formula, what is the monthly payment on $240,000 at 5.5% for 30 years (nearest cent)?

A. $666.67

B. $1,100.00

C. $1,362.69

D. $1,516.96

GO DEEPER 1 — Using the mortgage payment formula

Question 3 of 5 · Learn and Apply

LEARN

Comparing terms at the same rate shows the monthly cost of paying off faster.

A 15-year loan of $240,000 at 6.5% has a payment of $2,090.66. How much more is this per month than the 30-year payment of $1,516.96?

A. $573.70

B. $1,516.96

C. $2,090.66

D. $3,607.62

GO DEEPER 1 — Using the mortgage payment formula

Question 4 of 5 · Learn and Apply

LEARN

Interest saved = difference in total paid (the principal is the same).

At the same 6.5% rate, the 15-year loan totals $376,318.80 and the 30-year loan $546,105.60. How much interest does the 15-year loan save?

A. $573.70

B. $136,318.80

C. $169,786.80

D. $240,000.00

GO DEEPER 1 — Using the mortgage payment formula

Question 5 of 5 · Learn and Apply

LEARN

With any positive interest rate, each payment must cover interest as well as principal.

Which check confirms a calculated payment is reasonable?

A. It is less than the loan ÷ number of months

B. It is more than the loan ÷ number of months

C. It equals the yearly interest

D. It is the same at every rate

GO DEEPER 2 — Shopping for a mortgage rate

Question 1 of 5 · Learn and Apply

LEARN

Shopping several lenders can lower the rate. Small differences add up over a long loan.

Lender A offers 6.5%; Lender B offers 6.25% on the same $240,000, 30-year loan. Payments are $1,516.96 and $1,477.72. About how much does Lender B save over 30 years?

A. $39.24

B. $470.88

C. $600.00

D. $14,126.40

GO DEEPER 2 — Shopping for a mortgage rate

Question 2 of 5 · Learn and Apply

LEARN

Discount points are prepaid interest: you pay more at closing to get a lower rate.

Paying "points" means paying a fee up front to lower the rate. One point equals 1% of the loan. On $240,000, what is one point?

A. $1

B. $240

C. $2,400

D. $24,000

GO DEEPER 2 — Shopping for a mortgage rate

Question 3 of 5 · Learn and Apply

LEARN

Break-even months = up-front cost ÷ monthly savings.

One point ($2,400) lowers the payment by $39.24 a month. About how many months until the savings repay the point?

A. About 6 months

B. About 24 months

C. About 360 months

D. About 61 months

GO DEEPER 2 — Shopping for a mortgage rate

Question 4 of 5 · Knowledge Check

When is paying points usually a poor choice?

A. When you will keep the loan 30 years

B. When rates are fixed

C. When you expect to sell or refinance before the break-even point

D. When you want a lower rate and will keep the home for many decades

GO DEEPER 2 — Shopping for a mortgage rate

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Mortgage rates change frequently. Comparing standardized Loan Estimates gathered at the same time gives a fair comparison.

Why compare Loan Estimates from several lenders on the same day?

A. Rates change daily, so same-day quotes compare fairly

B. Lenders must match each other's rates by law each day

C. It locks the rate with every lender at once

D. Each extra quote lowers your score a lot

SET 77 · Mortgages and Homeownership

GO DEEPER 1 — Property tax in practice

Question 1 of 5 · Learn and Apply

LEARN

Property tax = assessed value × tax rate. Rates vary widely by town and state; New Jersey has some of the highest property taxes in the country.

A town's property tax rate is 2.2% of assessed value. A home is assessed at $350,000. What is the yearly tax?

A. $641.67

B. $770

C. $7,700

D. $77,000

GO DEEPER 1 — Property tax in practice

Question 2 of 5 · Learn and Apply

LEARN

Monthly difference = yearly difference ÷ 12.

Two similar homes cost $350,000 each. Town X taxes 2.2%; Town Y taxes 1.4%. How much more per month does Town X cost in taxes?

A. $28.00

B. $233.33

C. $641.67

D. $2,800.00

GO DEEPER 1 — Property tax in practice

Question 3 of 5 · Learn and Apply

LEARN

Escrow payments are adjusted when taxes or insurance change, even with a fixed-rate mortgage.

Property taxes can rise after a home is purchased. Why does this matter for buyers?

A. The loan principal increases

B. The monthly payment through escrow can increase

C. The interest rate rises

D. Nothing changes

GO DEEPER 1 — Property tax in practice

Question 4 of 5 · Learn and Apply

LEARN

Escrow changes are spread across the year's monthly payments.

An escrow analysis finds taxes rose $600 for the year. How much will the monthly payment rise?

A. $5

B. $50

C. $60

D. $600

GO DEEPER 1 — Property tax in practice

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Property tax records are public.

Where can a buyer find a home's past property taxes?

A. Public tax records or the listing's tax history

B. The buyer's credit report

C. The seller's own estimate of what the taxes might be

D. The mortgage preapproval letter

GO DEEPER 2 — Removing PMI and insurance choices

Question 1 of 5 · Learn and Apply

LEARN

For many conventional loans, borrowers can ask to remove PMI at 80% loan-to-value, and it ends automatically at 78% (based on the original value, under federal rules).

PMI on many conventional loans can be requested off when the balance falls to 80% of the original home value. The home cost $300,000. What balance is that?

A. $60,000

B. $240,000

C. $270,000

D. $300,000

GO DEEPER 2 — Removing PMI and insurance choices

Question 2 of 5 · Learn and Apply

LEARN

Total PMI paid = monthly PMI × number of months.

PMI of $112.50 a month is removed after 5 years. How much did the borrower pay in PMI?

A. $562.50

B. $1,350

C. $6,750

D. $67,500

GO DEEPER 2 — Removing PMI and insurance choices

Question 3 of 5 · Learn and Apply

LEARN

As with other insurance, a higher deductible usually means a lower premium.

Which homeowners insurance choice LOWERS the premium?

A. Lowering the deductible

B. Adding more coverage

C. Filing frequent small claims

D. Raising the deductible

GO DEEPER 2 — Removing PMI and insurance choices

Question 4 of 5 · Learn and Apply

LEARN

Flood insurance is usually separate, through the National Flood Insurance Program or private insurers.

Standard homeowners insurance usually does NOT cover which risk?

A. Fire

B. Theft

C. Flood damage

D. Wind from a storm

GO DEEPER 2 — Removing PMI and insurance choices

Question 5 of 5 · Knowledge Check

A lender requires flood insurance for homes in high-risk flood zones. Why?

A. To protect the home that secures the loan

B. To lower the buyer's property taxes each year

C. Because all homes flood

D. Because homeowners insurance always covers floods

SET 78 · Mortgages and Homeownership

Closing costs, the Loan Estimate, and the Closing Disclosure

MAIN skill: Estimate closing costs and use mortgage disclosures to compare and verify loans

Outcome FL.HOME.78 · National topic: Managing Credit · NJSLS 9.1.12: CDM, FI

Practical skills beyond the standards: Comparing Loan Estimates; Preventing closing wire fraud

Content status: time-sensitive
Source: CFPB (Loan Estimate and Closing Disclosure) — Lenders must provide a Loan Estimate within 3 business days of a mortgage application and a Closing Disclosure at least 3 business days before closing.
https://www.consumerfinance.gov/owning-a-home/loan-estimate/

MAIN — Estimate closing costs and use mortgage disclosures to compare and verify loans

Question 1 of 5 · Learn and Apply

LEARN

Closing costs are fees paid to complete a home purchase: lender fees, appraisal, title insurance, recording fees, prepaid taxes and insurance, and more. They are in addition to the down payment.

Closing costs often run about 2% to 5% of the loan amount. For a $240,000 loan, what is the range?

A. $480 to $1,200

B. $48,000 to $120,000

C. $2,000 to $5,000

D. $4,800 to $12,000

MAIN — Estimate closing costs and use mortgage disclosures to compare and verify loans

Question 2 of 5 · Learn and Apply

LEARN

Federal rules require a standard three-page Loan Estimate within 3 business days of applying. It shows the rate, monthly payment, closing costs, and cash needed to close, making offers easy to compare.

The Lees apply for a mortgage on a Monday, with no holidays that week. By about when must the lender give them a Loan Estimate?

A. Within 3 months

B. By Thursday of that week

C. Only at closing

D. Only after the home is appraised

MAIN — Estimate closing costs and use mortgage disclosures to compare and verify loans

Question 3 of 5 · Learn and Apply

LEARN

The Closing Disclosure lists the final loan terms and costs. Borrowers must receive it at least 3 business days before closing so they can compare it with the Loan Estimate.

The Lees' closing is set for a Friday, with no holidays that week. By which day at the latest must they receive the Closing Disclosure?

A. Thursday, the day before closing

B. Friday, at the closing table

C. Tuesday of that week

D. The Friday one month before

MAIN — Estimate closing costs and use mortgage disclosures to compare and verify loans

Question 4 of 5 · Learn and Apply

LEARN

Cash to close = down payment + closing costs − credits (such as a seller credit or deposit already paid).

Cash to close: down payment $60,000 + closing costs $7,200 − $2,000 seller credit. How much cash do the Lees need at closing?

A. $60,000

B. $65,200

C. $67,200

D. $69,200

MAIN — Estimate closing costs and use mortgage disclosures to compare and verify loans

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Comparing the Closing Disclosure with the Loan Estimate catches changes or errors before you sign.

The Closing Disclosure shows a rate of 6.9%, but the Loan Estimate showed 6.5% with the rate locked. What should the Lees do?

A. Sign anyway, since small differences are normal and expected

B. Ignore it, since the Loan Estimate was only a guess

C. Ask the lender to explain or correct it before signing

D. Pay extra to speed up closing

BACKWARD B1 · concept review — Fees as percents of a loan

Question 1 of 5 · Learn and Apply

LEARN

Percent of an amount = amount × rate as a decimal.

3% of $200,000 is...

A. $600

B. $6,000

C. $60,000

D. $203,000

BACKWARD B1 · concept review — Fees as percents of a loan

Question 2 of 5 · Learn and Apply

LEARN

Closing costs include appraisal, title, recording, lender fees, and prepaid items.

Which cost is a closing cost?

A. The monthly electric bill

B. An appraisal fee

C. Groceries for move-in day

D. The down payment itself

BACKWARD B1 · concept review — Fees as percents of a loan

Question 3 of 5 · Learn and Apply

LEARN

An appraisal estimates value; a home inspection checks condition. Lenders require appraisals to protect their collateral.

What does an appraisal do?

A. Inspects the home only for needed repairs and safety issues

B. Sets the property tax rate

C. Guarantees the home will sell for that price later

D. Estimates the home's market value for the lender

BACKWARD B1 · concept review — Fees as percents of a loan

Question 4 of 5 · Learn and Apply

LEARN

Business days usually exclude weekends and federal holidays.

How many business days are in a period from Monday to the following Wednesday (counting Tuesday, Wednesday, Thursday, Friday, Monday, Tuesday, Wednesday)?

A. 3

B. 5

C. 7

D. 9

BACKWARD B1 · concept review — Fees as percents of a loan

Question 5 of 5 · Knowledge Check

Why are standard forms like the Loan Estimate helpful?

A. They make offers from different lenders easy to compare

B. They lower home prices

C. They replace the need to read anything else in the file

D. They guarantee approval

GO DEEPER 1 — Reading a Loan Estimate

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

Page 1 of the Loan Estimate shows the projected monthly payment, including principal and interest and estimated escrow for taxes and insurance.

A Loan Estimate shows: loan $240,000; rate 6.5%; monthly principal and interest $1,516.96; estimated escrow $650. What is the estimated total monthly payment?

A. $650.00

B. $1,516.96

C. $1,560.00

D. $2,166.96

GO DEEPER 1 — Reading a Loan Estimate

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Origination charges are the lender's own fees, which can be negotiated or compared across lenders.

Section A, "Origination Charges," lists $1,200 of lender fees on Estimate 1 and $2,900 on Estimate 2 for the same rate. Which lender charges less to make the loan?

A. Estimate 2, by $1,700

B. They are equal

C. Estimate 1, by $4,100

D. Estimate 1, by $1,700

GO DEEPER 1 — Reading a Loan Estimate

Question 3 of 5 · Learn and Apply

LEARN

A rate lock holds a quoted rate for a set period while the loan is processed.

A Loan Estimate shows "Rate Lock: YES, until 4/15." What does that mean?

A. The rate can never change for the full 30 years

B. The quoted rate is guaranteed until April 15

C. The rate changes daily until closing

D. The house price is locked

GO DEEPER 1 — Reading a Loan Estimate

Question 4 of 5 · Learn and Apply

LEARN

The Loan Estimate includes comparison figures such as total paid in 5 years and APR.

Which number on page 3 of a Loan Estimate helps compare the total cost of loans over 5 years?

A. The monthly principal and interest only

B. The estimated property value

C. "In 5 Years: total you will have paid"

D. The amount of the down payment

GO DEEPER 1 — Reading a Loan Estimate

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

The Loan Estimate lists services you can shop for.

Some closing services, like title insurance, can be shopped for. Why does that matter?

A. Comparing providers can lower closing costs

B. It raises the interest rate

C. It is illegal to choose your own title company

D. It eliminates the down payment

GO DEEPER 2 — Closing day

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

Closings usually require certified funds or a wire. Wire fraud targeting homebuyers is common, so verify wiring instructions by phone using a known number.

Where does the Lees' cash to close usually need to come from?

A. A personal check written that morning, in all cases

B. Gift cards

C. A cashier's check or verified wire, following verified instructions

D. A credit card cash advance

GO DEEPER 2 — Closing day

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Changed wiring instructions are a major red flag for real estate wire fraud.

An email that appears to come from the title company changes the wiring instructions the day before closing. What should the Lees do?

A. Wire to the new account immediately

B. Reply to the email to confirm

C. Split the wire between both accounts to be safe, just in case

D. Call the title company at a known phone number to verify

GO DEEPER 2 — Closing day

Question 3 of 5 · Learn and Apply

LEARN

Title insurance protects against problems with ownership records, such as unknown liens or errors in the deed.

What is title insurance?

A. Protection against problems with who legally owns the property

B. Insurance against fire

C. Insurance that protects the lender if the buyer stops paying the loan

D. Insurance against defects found after moving in

GO DEEPER 2 — Closing day

Question 4 of 5 · Learn and Apply

LEARN

Lenders often require prepaid amounts to start the escrow account.

At closing, the buyer prepays 6 months of property taxes at $500 a month into escrow. How much is that?

A. $83.33

B. $500

C. $3,000

D. $6,000

GO DEEPER 2 — Closing day

Question 5 of 5 · Learn and Apply

LEARN

Closing documents: the promissory note is the promise to repay; the mortgage pledges the home as collateral; title insurance protects against ownership problems; the deed transfers ownership and is recorded with the local government.

Which document gives the buyer legal ownership of the home?

A. The promissory note

B. The deed

C. The appraisal

D. The title insurance policy

SET 79 · Mortgages and Homeownership

Preapproval, creditworthiness, and debt-to-income

MAIN skill: Explain preapproval and calculate housing and total debt-to-income ratios

Outcome FL.HOME.79 · National topic: Managing Credit · NJSLS 9.1.12: CP, CDM

Learning target: Explain how lenders evaluate creditworthiness and how DTI affects borrowing

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Ratios of debt to income (5 questions)
  - Why: DTI questions are percent-of-income problems with a subtraction step.
- B2 · Math link → G6-S01-M (Grade 6 6.RP.A.1): Write a ratio that describes the relationship between two quantities
  - Why: DTI is a ratio of payments to income.
- B3 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  - Why: Limits are percents of income.
- B4 · Math link → G7-S34-M (Grade 7 7.EE.B.4.b): Solve word problems that lead to inequalities of the form $px + q > r$ or $px + q < r$
  - Why: Affordability rules are inequalities (payments ≤ a percent of income).

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: From payment limit to price range (5 questions)
- Go Deeper 2: Improving mortgage readiness (5 questions)

Practical skills beyond the standards: Turning a payment limit into a price range

Content status: time-sensitive

Source: CFPB — A preapproval is a lender's statement of how much it may lend after reviewing documents; it is not a final loan approval.
https://www.consumerfinance.gov/ask-cfpb/whats-the-difference-between-a-prequalification-letter-and-a-preapproval-letter-en-127/

MAIN — Explain preapproval and calculate housing and total debt-to-income ratios

Question 1 of 5 · Learn and Apply

LEARN

A preapproval is a lender's statement, after checking income, assets, and credit, of how much it may lend. Sellers take offers with preapproval more seriously. Final approval still depends on the home's appraisal, verified information, and no major changes in finances.

The Lees receive a mortgage preapproval letter. What does it mean?

A. Their loan is now guaranteed, no matter what changes in their finances or the home's value

B. They must buy a home within one week

C. A lender reviewed their finances and may lend up to an amount, subject to final approval

D. The seller must accept their offer

MAIN — Explain preapproval and calculate housing and total debt-to-income ratios

Question 2 of 5 · Learn and Apply

LEARN

Lenders look at debt-to-income (DTI). A common guideline: housing costs (PITI) ≤ about 28% of gross monthly income (the "front-end" ratio), and all monthly debt payments including housing ≤ about 36% (the "back-end" ratio). Actual limits vary by loan program.

A lender uses a 28% guideline for housing costs. The Lees' gross monthly income is $8,000. What is the most housing payment (PITI) under that guideline?

A. $800

B. $2,240

C. $2,880

D. $5,760

MAIN — Explain preapproval and calculate housing and total debt-to-income ratios

Question 3 of 5 · Learn and Apply

LEARN

Back-end limit: housing + other debt payments ≤ 36% of gross income. Housing allowed = 36% of income − other debt payments.

Using the 36% total-debt guideline on $8,000 gross monthly income, and the Lees' $500 car payment and $300 student loan payment, what is the most they could spend on PITI?

A. $800

B. $2,080

C. $2,240

D. $2,880

MAIN — Explain preapproval and calculate housing and total debt-to-income ratios

Question 4 of 5 · Learn and Apply

LEARN

Lenders price mortgages by risk: credit score, down payment, DTI, and loan type all affect the rate.

Which factor most improves the mortgage rate a borrower is offered?

A. A higher offer on the house

B. A home with many bedrooms

C. A longer closing date

D. A strong credit history and score

MAIN — Explain preapproval and calculate housing and total debt-to-income ratios
Question 5 of 5 · Knowledge Check

After preapproval, the Lees finance a new car before closing. What could happen?

A. Their DTI rises and the mortgage approval could change
B. Nothing, since a preapproval is final and cannot change
C. Their rate automatically drops
D. The car loan is ignored until after closing

BACKWARD B1 · concept review — Ratios of debt to income

Question 1 of 5 · Learn and Apply

LEARN

DTI = monthly debt payments ÷ gross monthly income × 100.

Monthly debts of $1,500 on $6,000 gross income is what DTI?

A. 2.5%

B. 4%

C. 25%

D. 40%

BACKWARD B1 · concept review — Ratios of debt to income

Question 2 of 5 · Knowledge Check

36% of $5,000 is...

A. $180

B. $1,800

C. $3,200

D. $18,000

BACKWARD B1 · concept review — Ratios of debt to income

Question 3 of 5 · Learn and Apply

LEARN

DTI counts debt payments (loans, credit card minimums, the new housing payment), not everyday expenses.

Which is included in DTI?

A. Groceries

B. A monthly student loan payment

C. Gas for the car you drive each month

D. Streaming subscriptions

BACKWARD B1 · concept review — Ratios of debt to income

Question 4 of 5 · Knowledge Check

If income stays the same and debts go down, what happens to DTI?

A. It goes down

B. It goes up

C. It stays the same

D. It becomes 100%

BACKWARD B1 · concept review — Ratios of debt to income

Question 5 of 5 · Knowledge Check

Which income is used for DTI by most mortgage lenders?

A. Net income after a vacation

B. Yearly bonus only

C. Income from gifts

D. Gross monthly income

GO DEEPER 1 — From payment limit to price range

Question 1 of 5 · Learn and Apply

LEARN

To estimate a price range, subtract taxes and insurance from the PITI limit, then find what loan that principal-and-interest payment supports.

The Lees can afford $2,080 PITI. Taxes and insurance are $650 a month. How much is left for principal and interest?

A. $650

B. $1,430

C. $2,080

D. $2,730

GO DEEPER 1 — From payment limit to price range

Question 2 of 5 · Learn and Apply

LEARN

A payment factor gives the monthly cost per $1,000 borrowed. Loan supported ≈ payment ÷ factor × $1,000.

At 6.5% for 30 years, each $1,000 borrowed costs about $6.32 a month. About how large a loan does a $1,430 payment support?

A. About $9,000

B. About $226,000

C. About $143,000

D. About $350,000

GO DEEPER 1 — From payment limit to price range

Question 3 of 5 · Learn and Apply

LEARN

Price ≈ loan + down payment.

With a $226,000 loan and $60,000 down, about what home price can the Lees consider?

A. About $226,000

B. About $166,000

C. About $286,000

D. About $60,000

GO DEEPER 1 — From payment limit to price range

Question 4 of 5 · Learn and Apply

LEARN

Lender approval shows what a lender will lend, not what fits your full budget and goals.

A lender approves the Lees for up to $350,000. Their own budget says about $286,000. Which is wiser?

A. Spend the full approval to get a bigger house

B. Shop within their own budget

C. Borrow more to furnish the house

D. Skip the emergency fund to afford more

GO DEEPER 1 — From payment limit to price range

Question 5 of 5 · Learn and Apply

LEARN

DTI covers debt payments only.

Which budget item do lender DTI limits ignore but buyers should include?

A. The mortgage payment

B. Property taxes

C. Child care, saving, and home maintenance

D. Student loan payments and the car payment

GO DEEPER 2 — Improving mortgage readiness

Question 1 of 5 · Learn and Apply

LEARN

Paying off debts lowers monthly payments and DTI.

Which step most quickly improves DTI before applying?

A. Opening new credit cards to raise their total limit

B. Taking a cash advance

C. Financing furniture early

D. Paying off a small loan or credit card balance

GO DEEPER 2 — Improving mortgage readiness

Question 2 of 5 · Learn and Apply

LEARN

DTI change = payment removed ÷ income × 100.

The Lees pay off a $300 monthly student loan. Their gross income is $8,000. By how many percentage points does their DTI fall?

A. 0.375

B. 3.75

C. 7.5

D. 30

GO DEEPER 2 — Improving mortgage readiness

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Lenders verify income, assets, and debts with documents.

Which documents do lenders typically request for preapproval?

A. Pay stubs, W-2s or tax returns, and bank statements

B. Screenshots of their banking app balances for one day

C. School report cards

D. Restaurant receipts

GO DEEPER 2 — Improving mortgage readiness

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

State housing finance agencies (in New Jersey, the NJ Housing and Mortgage Finance Agency) offer programs for eligible first-time buyers.

Why might first-time buyers look into state housing finance agency programs?

A. They guarantee approval for anyone

B. They pay the whole mortgage for buyers with low income

C. They are for investors only

D. They may offer down payment help or lower-cost loans

GO DEEPER 2 — Improving mortgage readiness

Question 5 of 5 · Learn and Apply

LEARN

Prequalification is often based on self-reported information. Preapproval involves documentation and a credit check.

What is the difference between prequalification and preapproval?

A. They are identical

B. Prequalification is an estimate; preapproval checks documents

C. Preapproval is a final loan

D. Prequalification requires a down payment

SET 80 · Mortgages and Homeownership

Amortization, extra payments, and refinancing

MAIN skill: Follow mortgage amortization and evaluate extra payments and refinancing

Outcome FL.HOME.80 · National topic: Managing Credit · NJSLS 9.1.12: CDM

Learning target: Explain mortgage amortization and evaluate prepayment and refinancing decisions

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Interest on a remaining balance (5 questions)
  Why: Amortization repeats "interest on what is still owed."
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Monthly interest is a percent of the balance.
- B3 · Math link → G7-S29-M (Grade 7 7.EE.B.3): Solve multistep problems with positive and negative rational numbers in any form
  Why: Amortization steps repeat multiply-subtract-update.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: When refinancing makes sense (5 questions)
- Go Deeper 2: Extra payment strategies (5 questions)

Practical skills beyond the standards: Refinance break-even analysis

Content status: stable

MAIN — Follow mortgage amortization and evaluate extra payments and refinancing

Question 1 of 5 · Learn and Apply

LEARN

Mortgages amortize: each payment covers that month's interest (balance × annual rate ÷ 12), and the rest reduces the principal. Early payments are mostly interest.

On a $240,000 mortgage at 6.5%, how much of the FIRST monthly payment is interest?

A. $216.96

B. $1,300.00

C. $1,516.96

D. $15,600.00

MAIN — Follow mortgage amortization and evaluate extra payments and refinancing

Question 2 of 5 · Learn and Apply

LEARN

Principal paid = payment − interest.

The first payment is $1,516.96, and $1,300.00 of it is interest. How much reduces the principal?

A. $216.96

B. $1,300.00

C. $1,516.96

D. $2,816.96

MAIN — Follow mortgage amortization and evaluate extra payments and refinancing

Question 3 of 5 · Learn and Apply

LEARN

Extra payments go directly to principal (if the lender is told), shortening the loan and reducing interest.

Paying an extra $200 a month on that $240,000, 6.5% mortgage pays it off in about 262 months instead of 360. About how many years sooner is that?

A. About 8 years sooner

B. About 2 years sooner

C. About 98 years sooner

D. No sooner

MAIN — Follow mortgage amortization and evaluate extra payments and refinancing

Question 4 of 5 · Learn and Apply

LEARN

Refinancing pays off your current mortgage with a new one. It can lower the rate or payment but involves closing costs.

Refinancing means...

A. adding a second owner to the deed so two people share the payment

B. selling the home to the bank

C. replacing a mortgage with a new loan, often to get a lower rate

D. skipping payments for a year

MAIN — Follow mortgage amortization and evaluate extra payments and refinancing

Question 5 of 5 · Learn and Apply

LEARN

Break-even months = refinancing costs ÷ monthly savings. Refinancing makes sense if you will keep the loan well past the break-even point.

A refinance costs $4,000 and lowers the monthly payment by $200. How many months until the savings cover the cost?

A. 200 months

B. 2 months

C. 20 months

D. 40 months

BACKWARD B1 · concept review — Interest on a remaining balance

Question 1 of 5 · Learn and Apply

LEARN

Monthly interest = balance × annual rate ÷ 12.

A balance of $100,000 at 6% per year: what is one month's interest?

A. $50

B. $500

C. $600

D. $6,000

BACKWARD B1 · concept review — Interest on a remaining balance

Question 2 of 5 · Learn and Apply

LEARN

Payment − interest = principal reduction.

A $700 payment includes $500 of interest. How much reduces the balance?

A. $200

B. $500

C. $700

D. $1,200

BACKWARD B1 · concept review — Interest on a remaining balance

Question 3 of 5 · Learn and Apply

LEARN

Interest is charged on the remaining balance.

After the principal falls, next month's interest is…

A. slightly smaller

B. slightly larger

C. exactly the same

D. zero

BACKWARD B1 · concept review — Interest on a remaining balance

Question 4 of 5 · Knowledge Check

An extra $100 paid toward principal does what to future interest?

A. Raises it

B. Lowers it

C. Has no effect

D. Doubles it

BACKWARD B1 · concept review — Interest on a remaining balance

Question 5 of 5 · Learn and Apply

LEARN

With a fixed-rate mortgage, the principal-and-interest payment is constant; only the split between interest and principal changes.

Over the life of a fixed-rate mortgage, the monthly principal-and-interest payment…

A. rises every month

B. falls every month

C. changes with the stock market

D. stays the same

GO DEEPER 1 — When refinancing makes sense

Question 1 of 5 · Learn and Apply

LEARN

Refinancing to a lower rate lowers the payment if the term is similar.

The Lees owe $220,000 with 25 years left at 7%, paying $1,554.91. A new 25-year loan at 6% would cost $1,417.46. What is the monthly savings?

A. $13.75

B. $137.45

C. $1,417.46

D. $2,200.00

GO DEEPER 1 — When refinancing makes sense

Question 2 of 5 · Learn and Apply

LEARN

Break-even = closing costs ÷ monthly savings.

That refinance has $5,500 of closing costs. About how many months to break even?

A. About 4 months

B. About 137 months

C. About 400 months

D. About 40 months

GO DEEPER 1 — When refinancing makes sense

Question 3 of 5 · Learn and Apply

LEARN

Refinancing pays off only if you keep the new loan longer than the break-even time.

The Lees plan to move in 2 years. Should they refinance with a 40-month break-even?

A. Yes; refinancing always saves money

B. Probably not; they would leave before recovering the costs

C. Yes, because rates may fall even more next year, saving more

D. It makes no difference

GO DEEPER 1 — When refinancing makes sense

Question 4 of 5 · Learn and Apply

LEARN

Restarting a long term lowers payments partly by stretching repayment.

Refinancing a 30-year loan with 22 years left into a NEW 30-year loan can lower the payment but…

A. always lowers the total interest paid over the whole loan

B. removes all closing costs

C. add years of payments and possibly more total interest

D. pays off the house sooner

GO DEEPER 1 — When refinancing makes sense

Question 5 of 5 · Learn and Apply

LEARN

Cash-out refinancing turns home equity into cash by taking a larger loan.

A "cash-out" refinance borrows more than is owed and pays the difference in cash. What is a key risk?

A. More debt secured by the home

B. It lowers the balance automatically

C. It cannot affect the home

D. It is free money

GO DEEPER 2 — Extra payment strategies

Question 1 of 5 · Learn and Apply

LEARN

Biweekly half-payments result in one extra full payment each year, which shortens the loan if applied to principal.

Paying half the monthly payment every two weeks (26 half-payments a year) adds up to how many full payments per year?

A. 12

B. 13

C. 14

D. 26

GO DEEPER 2 — Extra payment strategies

Question 2 of 5 · Learn and Apply

LEARN

Extra principal over several years = extra payment per year × number of years.

One extra payment of $1,516.96 a year goes to principal. Over 10 years, how much extra principal is that?

A. $1,516.96

B. $7,584.80

C. $15,169.60

D. $151,696.00

GO DEEPER 2 — Extra payment strategies

Question 3 of 5 · Learn and Apply

LEARN

Extra mortgage payments "earn" the mortgage rate in saved interest, but money paid in is hard to access without selling or borrowing.

Which statement about prepaying a mortgage is TRUE?

A. It earns a guaranteed stock-market return every year

B. It is always better than any other goal

C. It increases the interest rate

D. It saves interest but ties up cash in the home

GO DEEPER 2 — Extra payment strategies

Question 4 of 5 · Learn and Apply

LEARN

Planners often suggest building savings and paying off costlier debts before making extra mortgage payments.

Before prepaying a mortgage, which goals do many planners suggest covering first?

A. An emergency fund and costly debt

B. A new car

C. A vacation

D. Nothing else matters

GO DEEPER 2 — Extra payment strategies

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

You can get the same effect as biweekly payments yourself, for free, by adding a little to each monthly payment.

Some third-party "biweekly payment services" charge setup fees. What is a cheaper alternative?

A. Paying the setup fee to a private biweekly payment service

B. Adding one-twelfth of a payment to each monthly payment

C. Skipping payments

D. Paying late

SET 81 · Mortgages and Homeownership

Fixed or adjustable rates, and the true cost of owning

MAIN skill: Compare fixed-rate and adjustable-rate mortgages and budget for the full cost of owning a home

Outcome FL.HOME.81 · National topic: Managing Credit · NJSLS 9.1.12: CDM, PB, RM

Learning target: Compare fixed-rate and adjustable-rate mortgages and the total cost of homeownership

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Fixed versus changing rates (5 questions)
  Why: Students must understand that a variable rate can change payments before comparing mortgage types.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Maintenance budgets and rate changes are percents.
- B3 · Math link → G6-S16-M (Grade 6 6.NS.B.3): Add multi-digit decimals
  Why: Total cost of owning adds many monthly costs.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Stress-testing an ARM (5 questions)
- Go Deeper 2: Affordability versus approval and long-term costs (5 questions)

Practical skills beyond the standards: Stress-testing an adjustable-rate mortgage; Budgeting for home maintenance

Content status: time-sensitive

Source: CFPB (Adjustable-rate mortgages) — An ARM has an initial fixed period, after which the rate adjusts based on an index plus a margin, subject to caps.
https://www.consumerfinance.gov/ask-cfpb/what-is-an-adjustable-rate-mortgage-arm-en-100/

MAIN — Compare fixed-rate and adjustable-rate mortgages and budget for the full cost of owning a home

Question 1 of 5 · Learn and Apply

LEARN

A fixed-rate mortgage keeps the same interest rate (and principal-and-interest payment) for the whole loan. An adjustable-rate mortgage (ARM) has a fixed rate for an initial period (for example, 5 years in a "5/1" ARM) and then adjusts periodically based on a market index plus a margin, within limits called caps.

Which statement describes a FIXED-rate mortgage?

A. The rate changes every single year with the overall market

B. The payment changes when the Fed changes rates

C. The interest rate stays the same for the whole loan

D. Payments rise every month by law

MAIN — Compare fixed-rate and adjustable-rate mortgages and budget for the full cost of owning a home

Question 2 of 5 · Learn and Apply

LEARN

An ARM's payment can rise when its rate resets. Plan for the possible higher payment, not only the starting one.

A 5/1 ARM starts at 5.5% on $240,000, with a $1,362.69 payment. After 5 years, the balance is $221,905.45 and the rate rises to 7.5%; the new payment is $1,639.86. How much does the payment rise?

A. $2.00

B. $277.17

C. $1,639.86

D. $4,800.00

MAIN — Compare fixed-rate and adjustable-rate mortgages and budget for the full cost of owning a home

Question 3 of 5 · Knowledge Check

Who is an ARM most likely to suit?

A. A buyer who wants a monthly payment that will never change

B. A buyer on a tight budget who plans to stay 30 years

C. A buyer who expects to sell before the fixed period ends

D. A buyer who cannot afford any payment increase

MAIN — Compare fixed-rate and adjustable-rate mortgages and budget for the full cost of owning a home

Question 4 of 5 · Learn and Apply

LEARN

Owners pay for repairs and upkeep: roofs, appliances, heating systems, painting. Budgeting for these prevents surprises.

A common guideline budgets 1% to 2% of a home's value each year for maintenance and repairs. For a $300,000 home, what yearly range is that?

A. $300 to $600

B. $3,000 to $6,000

C. $30,000 to $60,000

D. $1,000 to $2,000

MAIN — Compare fixed-rate and adjustable-rate mortgages and budget for the full cost of owning a home

Question 5 of 5 · Knowledge Check

The Lees' PITI is $2,166.96. Maintenance is $400 a month, and utilities $300. What is their total monthly cost of owning?

A. $700.00

B. $2,166.96

C. $2,566.96

D. $2,866.96

BACKWARD B1 · concept review — Fixed versus changing rates

Question 1 of 5 · Learn and Apply

LEARN

Fixed rates stay the same; variable (adjustable) rates can change.

A savings account rate is "variable." What does that mean?

A. The rate can change over time

B. The rate is locked forever

C. The rate is zero

D. The rate is set by the customer

BACKWARD B1 · concept review — Fixed versus changing rates

Question 2 of 5 · Learn and Apply

LEARN

Higher rates mean more interest each month.

If a loan's rate rises and nothing else changes, what happens to the payment?

A. It falls

B. It stays the same

C. It disappears

D. It rises

BACKWARD B1 · concept review — Fixed versus changing rates

Question 3 of 5 · Learn and Apply

LEARN

ARM caps limit how much the rate can change at each adjustment and over the life of the loan.

What is a rate "cap" on an ARM?

A. A fee for opening the loan

B. A guarantee that the rate will fall later

C. The down payment

D. A limit on how much the rate can rise

BACKWARD B1 · concept review — Fixed versus changing rates

Question 4 of 5 · Learn and Apply

LEARN

In "5/1," the first number is the fixed period in years; the second is how often (years) it adjusts after.

In a "5/1 ARM," what does the 5 mean?

A. The rate is fixed for the first 5 years

B. The rate is 5%

C. The loan lasts 5 years, then the balance is due

D. There are 5 payments

BACKWARD B1 · concept review — Fixed versus changing rates

Question 5 of 5 · Knowledge Check

1% of $250,000 is...

A. $25
B. $250
C. $2,500
D. $25,000

GO DEEPER 1 — Stress-testing an ARM

Question 1 of 5 · Learn and Apply

LEARN

The lifetime cap sets the maximum rate: start rate + lifetime cap.

An ARM has a 2% cap per adjustment and a 5% lifetime cap over a 5.5% start rate. What is the highest rate it could ever reach?

A. 5.5%

B. 7.5%

C. 10.5%

D. 12.5%

GO DEEPER 1 — Stress-testing an ARM

Question 2 of 5 · Learn and Apply

LEARN

The per-adjustment cap limits each change.

Under that ARM's caps, what is the highest rate at the FIRST adjustment?

A. 5.5%

B. 6.5%

C. 7.5%

D. 10.5%

GO DEEPER 1 — Stress-testing an ARM

Question 3 of 5 · Learn and Apply

LEARN

A "stress test" checks the worst-case payment.

Which question helps decide whether an ARM is safe for a household?

A. Is the starting rate lower than today's 30-year fixed rate?

B. Could we afford the payment at the highest possible rate?

C. Will the lender approve the loan amount?

D. Will rates definitely fall?

GO DEEPER 1 — Stress-testing an ARM

Question 4 of 5 · Learn and Apply

LEARN

Savings over a period = monthly savings × number of months.

An ARM saves $150 a month for 5 years compared with a fixed loan. How much does it save in that time?

A. $150

B. $750

C. $1,800

D. $9,000

GO DEEPER 1 — Stress-testing an ARM

Question 5 of 5 · Learn and Apply

LEARN

Months to use up savings = savings ÷ extra monthly cost.

If rates rise and the ARM payment becomes $277 higher than the fixed payment after year 5, how long until the earlier $9,000 savings are used up?

A. About 3 months

B. About 277 months

C. About 32 months

D. Never

GO DEEPER 2 — Affordability versus approval and long-term costs

Question 1 of 5 · Learn and Apply

LEARN

PITI covers the mortgage, taxes, and insurance. Owners also pay utilities, maintenance, and sometimes HOA dues.

Which costs of owning are NOT part of PITI?

A. Property taxes

B. Homeowners insurance

C. Repairs, utilities, and HOA dues

D. Principal and interest

GO DEEPER 2 — Affordability versus approval and long-term costs

Question 2 of 5 · Learn and Apply

LEARN

Homeowners association dues pay for shared upkeep in condos and some neighborhoods.

A condo has HOA dues of $250 a month. How much is that per year?

A. $250

B. $300

C. $2,500

D. $3,000

GO DEEPER 2 — Affordability versus approval and long-term costs

Question 3 of 5 · Learn and Apply

LEARN

Setting money aside for repairs avoids borrowing when big systems fail.

A furnace replacement costs $6,000 in year 3. Which fund should pay for it?

A. A credit card cash advance

B. A home maintenance reserve

C. The down payment

D. A payday loan

GO DEEPER 2 — Affordability versus approval and long-term costs

Question 4 of 5 · Knowledge Check

Which statement about lender approval is TRUE?

A. Approval guarantees the home is affordable within your full monthly budget

B. Approval sets property taxes

C. Approval includes maintenance costs

D. Approval shows what a lender will lend, not what fits your whole budget

GO DEEPER 2 — Affordability versus approval and long-term costs

Question 5 of 5 · Learn and Apply

LEARN

Home prices are not guaranteed to rise.

Home values can rise or fall. A home bought for $300,000 falls 10% in value. What is it worth?

A. $30,000

B. $270,000

C. $299,990

D. $330,000

SET 82 · Buying, Financing, and Owning a Vehicle

The total cost of buying a car

MAIN skill: Find the out-the-door price of a vehicle and check a car before buying

Outcome FL.CAR.82 · National topic: Spending · NJSLS 9.1.12: CDM, PB

Learning target: Calculate the total cost of buying a vehicle and evaluate a used car before purchase

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Taxes and fees on a purchase (5 questions)
  Why: The out-the-door price adds a percent tax and flat fees to the price.
- B2 · Math link → G7-S63-M (Grade 7 7.RP.A.3): Find sales tax and the final cost with tax
  Why: Sales tax on a car is a percent of the price.
- B3 · Math link → G7-S65-M (Grade 7 7.RP.A.3): Find a percent fee and the total with the fee
  Why: Fees and taxes are added to the price to get the out-the-door total.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: New, used, and certified pre-owned (5 questions)
- Go Deeper 2: Negotiating, add-ons, and trade-ins (5 questions)

Practical skills beyond the standards: Finding the out-the-door price; Checking a VIN for recalls; Declining add-ons

Content status: time-sensitive

Source: New Jersey Division of Taxation — The New Jersey sales tax rate has been 6.625% since January 1, 2018.
https://www.nj.gov/treasury/taxation/

Source: FTC (Buying a used car from a dealer) — Dealers must post a Buyers Guide on used cars that says whether the car is sold "as is" or with a warranty; some states add their own used-car warranty rules.

Source: NHTSA (Recalls) — Anyone can check a vehicle identification number (VIN) for open safety recalls for free.
https://www.nhtsa.gov/recalls

MAIN — Find the out-the-door price of a vehicle and check a car before buying

Question 1 of 5 · Learn and Apply

LEARN

Buying a car costs more than its price. Sales tax is a percent of the price: tax = price × rate as a decimal. New Jersey's rate is 6.625% (0.06625).

Maya buys a car priced at $24,000 in New Jersey, where sales tax is 6.625%. In this example, tax applies to the price only. How much is the sales tax?

A. $159

B. $1,590

C. $15,900

D. $25,590

MAIN — Find the out-the-door price of a vehicle and check a car before buying

Question 2 of 5 · Learn and Apply

LEARN

The out-the-door price is the total you pay to drive away: vehicle price + sales tax + dealer fees + title and registration + any add-ons.

A car is priced at $24,000. Tax is $1,590, the dealer documentation fee is $399, and title and registration cost $260. What is the out-the-door price?

A. $24,000

B. $24,659

C. $25,590

D. $26,249

MAIN — Find the out-the-door price of a vehicle and check a car before buying

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

A payment depends on price, rate, and loan length. A dealer can meet any payment target by stretching the loan or raising the price, so agree on the total price first, then discuss financing.

A salesperson asks, "What monthly payment do you want?" Why is it smarter to negotiate the out-the-door price?

A. A low payment can hide a higher price

B. Monthly payments include no interest, so they show the true cost

C. Dealers are not allowed to change a price once a payment is named

D. Talking about price is rude, so the payment is a friendlier way to agree

MAIN — Find the out-the-door price of a vehicle and check a car before buying

Question 4 of 5 · Learn and Apply

LEARN

Federal rules require dealers to post a Buyers Guide on used cars. It says whether the car comes with a warranty or is sold "as is." Some states, including New Jersey, require a limited warranty on many used cars, so check your state's rules.

In a state with no extra used-car warranty law, a used car's Buyers Guide is checked "AS IS - NO DEALER WARRANTY." What does that mean?

A. The dealer must fix any problem for one full year after the sale

B. The car has passed a state inspection that guarantees its condition

C. The buyer pays for repairs after the sale

D. The price is final and the dealer will not negotiate it at all

MAIN — Find the out-the-door price of a vehicle and check a car before buying

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

A pre-purchase inspection by a mechanic you choose costs a little and can reveal expensive problems. Also take a test drive and check the vehicle history report.

Before buying a used car from a private seller, which step best protects Maya?

A. Pay for an independent mechanic's inspection

B. Trust the seller's description because they have owned it for years

C. Skip the test drive so the car does not get more miles on it

D. Judge the condition from the photos in the online listing

BACKWARD B1 · concept review — Taxes and fees on a purchase

Question 1 of 5 · Learn and Apply

LEARN

Tax = price × rate. Write the percent as a decimal: 6% = 0.06.

What is 6% sales tax on a $10,000 car?

A. $60

B. $600

C. $6,000

D. $10,600

BACKWARD B1 · concept review — Taxes and fees on a purchase

Question 2 of 5 · Learn and Apply

LEARN

Price with tax = price + tax, or price × (1 + rate).

A $10,000 car has 6% sales tax. What is the price with tax?

A. $600

B. $10,060

C. $10,600

D. $16,000

BACKWARD B1 · concept review — Taxes and fees on a purchase

Question 3 of 5 · Learn and Apply

LEARN

Buying costs are paid once (tax, title, registration at purchase, dealer fees). Owning costs repeat (insurance, fuel, maintenance).

Which is a one-time cost of buying a car?

A. The monthly insurance premium, paid as long as you drive

B. The title fee

C. Gasoline, bought every week or two

D. Oil changes every few thousand miles

BACKWARD B1 · concept review — Taxes and fees on a purchase

Question 4 of 5 · Learn and Apply

LEARN

Doc fees are set by the dealer, not the government. Ask about them early and include them in the out-the-door price.

What is a dealer documentation ("doc") fee?

A. A government tax that every buyer must pay to the state

B. A refundable deposit returned after one year

C. A discount for buyers who bring their own documents

D. A dealer charge for paperwork

BACKWARD B1 · concept review — Taxes and fees on a purchase

Question 5 of 5 · Knowledge Check

A $5,000 car has $350 tax and $300 in fees. What is the total cost?

A. $650

B. $5,300

C. $5,350

D. $5,650

GO DEEPER 1 — New, used, and certified pre-owned

Question 1 of 5 · Learn and Apply

LEARN

New cars lose value (depreciate) fastest in the first years. That is why a lightly used car can cost much less than a new one.

A new $30,000 car loses 20% of its value in the first year. What is it worth after one year?

A. $6,000

B. $24,000

C. $29,400

D. $36,000

GO DEEPER 1 — New, used, and certified pre-owned

Question 2 of 5 · Learn and Apply

LEARN

CPO programs, usually run by manufacturers, inspect late-model used cars and add an extended warranty, at a higher price than a regular used car.

What is a certified pre-owned (CPO) car?

A. A brand-new car that has never been registered to anyone

B. A used car whose price is set by the government

C. A used car inspected and backed by a warranty

D. Any used car sold by a private seller with a receipt

GO DEEPER 1 — New, used, and certified pre-owned

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

History reports (from services such as Carfax or AutoCheck) show past accidents, title brands such as salvage or flood, and odometer readings.

A vehicle history report shows a "salvage" title. What does that mean?

A. An insurer once declared it a total loss

B. The car has had only one careful owner since it was new

C. The car was built with recycled parts to protect the environment

D. The car qualifies for a lower sales tax rate

GO DEEPER 1 — New, used, and certified pre-owned

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

The National Highway Traffic Safety Administration (NHTSA) lets anyone search a 17-character vehicle identification number (VIN) for unrepaired recalls. Recall repairs are free at a dealer.

Where can a buyer check a car's VIN for open safety recalls for free?

A. Only the seller's word, since recall records are private

B. The price on the car's window sticker

C. A paid membership site that sells recall lists

D. NHTSA's recall lookup

GO DEEPER 1 — New, used, and certified pre-owned

Question 5 of 5 · Knowledge Check

Car A: used, $15,000, expected 3-year repairs $2,400. Car B: certified pre-owned, $17,500, warranty limits repairs to about $400. Which has the lower expected 3-year cost?

A. Car B, by $500

B. Car A, by $500

C. Car A, by $2,500

D. Car B, by $2,000

GO DEEPER 2 — Negotiating, add-ons, and trade-ins

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

Pricing guides (such as Kelley Blue Book or Edmunds) and listings for similar cars show what buyers typically pay. Getting written quotes from several dealers also helps.

Before visiting a dealer, Maya looks up the car's typical selling price on several pricing guides. Why?

A. To know a fair offer before negotiating

B. Because dealers must sell at the price shown on any website

C. So she can skip reading the purchase contract

D. Because online prices already include her tax and fees

GO DEEPER 2 — Negotiating, add-ons, and trade-ins

Question 2 of 5 · Learn and Apply

LEARN

Add-ons are extra products sold with a car. They raise the price, and if financed, you pay interest on them too.

The finance office adds an extended warranty ($1,800), VIN etching ($300), and paint protection ($600). How much do these add-ons add to the cost?

A. $1,800

B. $2,100

C. $2,400

D. $2,700

GO DEEPER 2 — Negotiating, add-ons, and trade-ins

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Extended warranties, etching, and protection packages are optional. A dealer may not say they are required to get a loan if they are not.

Can Maya refuse the add-ons?

A. No; federal law requires every buyer to purchase them

B. Only if she pays the full price in cash with no loan

C. Yes; they are optional

D. No; once listed on the worksheet, they cannot be removed

GO DEEPER 2 — Negotiating, add-ons, and trade-ins

Question 4 of 5 · Learn and Apply

LEARN

Equity = value − amount owed. When you owe more than the car is worth, the difference is negative equity ("being underwater").

Sam's current car is worth $6,000 as a trade-in, but Sam still owes $8,000 on its loan. What is Sam's negative equity?

A. $2,000

B. $6,000

C. $8,000

D. $14,000

GO DEEPER 2 — Negotiating, add-ons, and trade-ins

Question 5 of 5 · Learn and Apply

LEARN

Rolling negative equity into a new loan adds the old debt to the new one, so you start the new loan even further underwater.

Sam rolls the $2,000 negative equity into a new $20,000 car loan. How much does Sam now borrow?

A. $18,000

B. $20,000

C. $22,000

D. $26,000

SET 83 · Buying, Financing, and Owning a Vehicle

Auto loans

MAIN skill: Compare auto loans by payment, term, and total interest, and use a preapproval

Outcome FL.CAR.83 · National topic: Managing Credit · NJSLS 9.1.12: CDM, CP

Learning target: Compare the costs of auto financing options using APR, term, and total interest

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Loan basics: principal, APR, and term (5 questions)
  - Why: Comparing auto loans needs the parts of a loan and how they connect.
- B2 · Math link → G6-S19-M (Grade 6 6.NS.B.3): Multiply multi-digit decimals
  - Why: Total paid is a decimal payment times the number of months.
- B3 · Math link → G7-S29-M (Grade 7 7.EE.B.3): Solve multistep problems with positive and negative rational numbers in any form

- Go Deeper 1: Comparing financing offers (5 questions)
- Go Deeper 2: When car loans go wrong (5 questions)

Practical skills beyond the standards: Getting preapproved for an auto loan; Reading a Truth in Lending disclosure

Content status: time-sensitive

Source: CFPB (Auto loans) — Getting preapproved and comparing the total cost of loans helps borrowers; dealers may arrange financing and can add to the rate a lender offers. https://www.consumerfinance.gov/consumer-tools/auto-loans/

MAIN — Compare auto loans by payment, term, and total interest, and use a preapproval

Question 1 of 5 · Learn and Apply

LEARN

An auto loan is an installment loan. Total paid = monthly payment × number of months. Interest = total paid − amount borrowed.

A $20,000 auto loan at 6% APR for 60 months has a payment of $386.66. How much interest is paid over the loan?

A. $1,200.00

B. $3,199.60

C. $6,000.00

D. $23,199.60

MAIN — Compare auto loans by payment, term, and total interest, and use a preapproval

Question 2 of 5 · Learn and Apply

LEARN

A longer term lowers the payment but usually raises the total interest, because the balance is paid down more slowly.

A $20,000 loan at 6% for 72 months has a $331.46 payment and $3,865.12 of interest. The 60-month loan has $3,199.60 of interest. How much more interest does the longer loan cost?

A. $55.20

B. $665.52

C. $3,865.12

D. $7,064.72

MAIN — Compare auto loans by payment, term, and total interest, and use a preapproval

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Dealers can arrange financing by sending your application to lenders, and may add to the rate a lender approves. A preapproval from your own bank or credit union gives you an offer to compare against.

Why should Maya get preapproved by a bank or credit union before visiting a dealer?

A. Because dealers are not allowed to offer any financing at all

B. Because a preapproval guarantees the lowest price on the car

C. Because preapproval removes the need for a credit check later

D. To have a rate to compare

MAIN — Compare auto loans by payment, term, and total interest, and use a preapproval

Question 4 of 5 · Learn and Apply

LEARN

Cars lose value quickly. On a long loan with little down, the balance falls more slowly than the car's value, so the borrower can be "underwater" for years.

Why can an 84-month loan with a small down payment be risky?

A. Long loans always have lower total interest than short ones

B. The loan can exceed the car's value

C. Lenders cannot repossess cars on loans longer than five years

D. Payments rise every year on a long fixed-rate auto loan

MAIN — Compare auto loans by payment, term, and total interest, and use a preapproval

Question 5 of 5 · Learn and Apply

LEARN

A down payment is cash paid up front. Amount borrowed = price − down payment. A larger down payment means a smaller loan and less interest.

Maya puts 20% down on a $25,000 car. How much does she need to borrow (ignoring tax and fees)?

A. $5,000

B. $20,000

C. $22,500

D. $30,000

BACKWARD B1 · concept review — Loan basics: principal, APR, and term

Question 1 of 5 · Learn and Apply

Auto loan terms are given in months. Divide by 12 to get years.

A loan term of 60 months is how many years?

A. 3

B. 5

C. 6

D. 60

BACKWARD B1 · concept review — Loan basics: principal, APR, and term

Question 2 of 5 · Learn and Apply

LEARN

Principal is the amount borrowed. Interest is the cost of borrowing it, shown as an annual percentage rate (APR).

Luis borrows $8,000 for a car and will repay $9,200 in total. What is the principal?

A. $1,200

B. $8,000

C. $9,200

D. $17,200

BACKWARD B1 · concept review — Loan basics: principal, APR, and term

Question 3 of 5 · Knowledge Check

A loan has 48 payments of $300. What is the total paid?

A. $348

B. $1,440

C. $12,000

D. $14,400

BACKWARD B1 · concept review — Loan basics: principal, APR, and term

Question 4 of 5 · Knowledge Check

Two loans have the same amount and term. Which costs less in interest?

A. The one with the lower APR

B. The one with the higher APR, since it pays off faster

C. They cost the same because the amount is the same

D. The one from the dealer that is closest to home

BACKWARD B1 · concept review — Loan basics: principal, APR, and term

Question 5 of 5 · Learn and Apply

LEARN

Interest = total paid − amount borrowed.

A borrower pays $14,400 in total on a $12,000 loan. How much was interest?

A. $1,200

B. $2,400

C. $14,400

D. $26,400

GO DEEPER 1 — Comparing financing offers

Question 1 of 5 · Learn and Apply

LEARN

Dealers sometimes offer a choice: a low rate or a cash rebate. Compare the total paid under each.

Offer 1: 0% APR for 60 months on a $30,000 car. Offer 2: a $3,000 rebate, then $27,000 at 5% for 60 months ($509.52 a month). Which costs less in total?

A. Offer 2, by $571.20

B. Offer 2, by $3,000

C. Offer 1, by $571.20

D. Offer 1, by $3,000

GO DEEPER 1 — Comparing financing offers

Question 2 of 5 · Learn and Apply

LEARN

Credit history strongly affects the rate offered. Total paid = payment × 60.

On $20,000 for 60 months, a 6% APR gives $386.66 a month and a 15% APR gives $475.80. How much more does the 15% borrower pay in total?

A. $89.14

B. $1,800.00

C. $5,348.40

D. $28,548.00

GO DEEPER 1 — Comparing financing offers

Question 3 of 5 · Learn and Apply

LEARN

Most auto loans charge interest on the remaining balance. Paying extra principal shrinks the balance, so later interest is smaller. Check the contract for a prepayment penalty.

On a simple-interest auto loan with no prepayment penalty, what does an extra $100 payment toward principal do?

A. Nothing, because interest is fixed when the loan starts

B. Reduces the interest charged later

C. Raises the next monthly payment by $100

D. Adds a $100 fee to the loan balance

GO DEEPER 1 — Comparing financing offers

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Federal Truth in Lending rules require the APR, finance charge (total interest and certain fees), amount financed, and total of payments to be disclosed before you sign.

A Truth in Lending disclosure shows: amount financed $20,000; finance charge $3,199.60. What is the total of payments?

A. $3,199.60

B. $16,800.40

C. $20,000.00

D. $23,199.60

GO DEEPER 1 — Comparing financing offers

Question 5 of 5 · Knowledge Check · Practical how-to

A dealer offers 7.5% APR. Maya's credit union preapproved her at 5.9%. What should she do?

A. Accept 7.5% because dealer loans are always cheapest

B. Take both loans to have extra cash

C. Tell the dealer she has no other offer

D. Ask the dealer to beat 5.9% or use the credit union

GO DEEPER 2 — When car loans go wrong

Question 1 of 5 · Learn and Apply

LEARN

After a repossession, the lender sells the car. If the sale does not cover the balance plus costs, the borrower may owe the rest (a deficiency).

Jo stops paying and the car is repossessed. Jo owed $12,000; the car sells at auction for $8,000, and repossession costs are $1,000. What does Jo still owe?

A. $0

B. $4,000

C. $5,000

D. $13,000

GO DEEPER 2 — When car loans go wrong

Question 2 of 5 · Learn and Apply

LEARN

A cosigner promises to repay if the borrower does not. Missed payments appear on the cosigner's credit report too.

Alex cosigns a friend's car loan. If the friend stops paying, what happens?

A. Only the friend's credit is affected by any missed payment

B. The lender must forgive the loan because there are two signers

C. The car is transferred to Alex for free

D. Alex must pay

GO DEEPER 2 — When car loans go wrong

Question 3 of 5 · Learn and Apply

LEARN

GAP (guaranteed asset protection) covers the gap between the car's value and the loan balance if the car is totaled or stolen. It is optional and often cheaper from an insurer than a dealer.

A car is totaled. Insurance pays its value, $14,000, but the loan balance is $18,000. How much would GAP coverage pay?

A. $4,000

B. $14,000

C. $18,000

D. $32,000

GO DEEPER 2 — When car loans go wrong

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Lenders may offer a deferral or modified plan if contacted early.

Jo expects to miss a car payment next month. What is the best first step?

A. Hide the car so the lender cannot find it

B. Ignore the lender's letters until the problem passes

C. Call the lender before the payment is missed

D. Take a payday loan at very high cost

GO DEEPER 2 — When car loans go wrong

Question 5 of 5 · Learn and Apply

LEARN

Compare interest: payment × months − amount borrowed.

Which shows a loan with the highest total cost?

A. $20,000 at 4% for 60 months, $368.33 a month

B. $15,000 at 12% for 48 months, $395.01 a month

C. $20,000 at 6% for 36 months, with $608.44 a month

D. $18,000 at 7% for 60 months, $356.42 a month

SET 84 · Buying, Financing, and Owning a Vehicle

The cost of owning a car

MAIN skill: Estimate fuel, maintenance, and depreciation, and find the monthly cost of owning a car

Outcome FL.CAR.84 · National topic: Spending · NJSLS 9.1.12: PB, CDM

Learning target: Estimate the total cost of owning and operating a vehicle, including depreciation

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Unit costs of driving (5 questions)
  Why: Ownership costs use rates: miles per gallon, cost per gallon, and cost per month.
- B2 · Math link → G7-S01-M (Grade 7 7.RP.A.1): Compute unit rates associated with ratios of fractions
  Why: Fuel economy and cost per mile are unit rates.
- B3 · Math link → ALG1-S55-M (Algebra 1 HSF-LE.A.1.c): Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval
  Why: Depreciation is often modeled as a constant percent decrease each year.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Modeling depreciation (5 questions)

MAIN — Estimate fuel, maintenance, and depreciation, and find the monthly cost of owning a car

Question 1 of 5 · Learn and Apply

LEARN

Fuel cost = (miles ÷ miles per gallon) × price per gallon. First find the gallons used, then multiply by the price.

Maya drives 12,000 miles a year in a car that gets 30 miles per gallon. Gas costs $3.50 a gallon. What is her yearly fuel cost?

A. $400

B. $1,050

C. $1,400

D. $42,000

MAIN — Estimate fuel, maintenance, and depreciation, and find the monthly cost of owning a car

Question 2 of 5 · Learn and Apply

LEARN

Depreciation is the loss in a car's value. A common model takes the same percent each year: value = price × (1 − rate)^years.

A car bought for $30,000 loses 15% of its value each year. What is it worth after 2 years?

A. $8,325

B. $21,000

C. $21,675

D. $25,500

MAIN — Estimate fuel, maintenance, and depreciation, and find the monthly cost of owning a car

Question 3 of 5 · Learn and Apply

LEARN

The true cost of a car is much more than the loan payment. Add every regular cost: payment, insurance, fuel, maintenance, parking, and tolls.

Maya's monthly costs: loan payment $386.66, insurance $150, fuel $117, maintenance $60. What is her monthly cost of owning the car?

A. $327.00

B. $386.66

C. $536.66

D. $713.66

MAIN — Estimate fuel, maintenance, and depreciation, and find the monthly cost of owning a car

Question 4 of 5 · Learn and Apply

LEARN

Fuel cost = miles ÷ mpg × price. Compare the two totals.

Car A gets 40 mpg and Car B gets 20 mpg. Each drives 10,000 miles a year with gas at $3.60. How much more does Car B spend on fuel each year?

A. $250

B. $900

C. $1,800

D. $2,700

MAIN — Estimate fuel, maintenance, and depreciation, and find the monthly cost of owning a car

Question 5 of 5 · Learn and Apply

LEARN

The owner's manual lists a maintenance schedule. Small regular costs (oil, filters, tires, brakes) prevent large repair bills.

What usually happens when an owner skips scheduled maintenance such as oil changes?

A. Costlier repairs later

B. The car runs better because parts are not disturbed

C. Insurance pays for repairs caused by neglect

D. The warranty covers it no matter what

BACKWARD B1 · concept review — Unit costs of driving

Question 1 of 5 · Learn and Apply

LEARN

Miles per gallon (mpg) = miles ÷ gallons.

A car goes 300 miles on 10 gallons. What is its fuel economy?

A. 30 miles per gallon

B. 3,000 miles per gallon

C. 0.03 miles per gallon

D. 310 miles per gallon

BACKWARD B1 · concept review — Unit costs of driving

Question 2 of 5 · Knowledge Check

Gas is $3.40 a gallon. How much do 12 gallons cost?

A. $4.08

B. $15.40

C. $36.00

D. $40.80

BACKWARD B1 · concept review — Unit costs of driving

Question 3 of 5 · Learn and Apply

LEARN

Fixed costs (insurance, loan payment, registration) do not change with miles. Variable costs (fuel, tolls, wear) rise as you drive more.

Which car cost stays the same each month no matter how much you drive?

A. Gasoline, which depends on miles driven

B. Tolls, paid on each trip

C. An insurance premium

D. Tire wear, which grows with miles

BACKWARD B1 · concept review — Unit costs of driving

Question 4 of 5 · Knowledge Check

Insurance costs $1,200 a year. How much is that per month?

A. $100

B. $120

C. $1,200

D. $14,400

BACKWARD B1 · concept review — Unit costs of driving

Question 5 of 5 · Knowledge Check

What is depreciation?

A. The interest charged on a car loan

B. A tax paid when a car is registered

C. The rise in a car's price because of inflation

D. The drop in a car's value over time

GO DEEPER 1 — Modeling depreciation

Question 1 of 5 · Learn and Apply

LEARN

In a constant-percent model, each year's value is 85% of the year before.

Using value = 30,000 × 0.85^t, what is the car worth after 3 years?

A. $16,500.00

B. $18,423.75

C. $21,675.00

D. $25,500.00

GO DEEPER 1 — Modeling depreciation

Question 2 of 5 · Learn and Apply

LEARN

Percent loss = (original − new) ÷ original × 100.

A $30,000 car is worth $18,000 after 3 years. What percent of its value did it lose?

A. 12%

B. 40%

C. 60%

D. 67%

GO DEEPER 1 — Modeling depreciation

Question 3 of 5 · Learn and Apply

LEARN

The same percent of a smaller value is a smaller dollar amount. Year 1: $4,500 lost. Year 2: $3,825 lost.

Under a 15%-per-year model, how does the dollar drop in year 2 compare with year 1?

A. It is larger, because cars lose value faster as they age

B. It is smaller

C. It is the same, because the rate is the same every year

D. It is zero, because cars stop losing value after one year

GO DEEPER 1 — Modeling depreciation

Question 4 of 5 · Knowledge Check

Why can a 2- or 3-year-old car be a good value?

A. Older cars never need any repairs at all

B. Used cars are exempt from sales tax everywhere

C. The steepest value loss has already happened

D. Insurance costs nothing on cars over two years old

GO DEEPER 1 — Modeling depreciation

Question 5 of 5 · Learn and Apply

LEARN

Cost per mile = total yearly cost ÷ miles driven. It helps compare driving with other ways of getting around.

Owning a car costs $7,200 a year, and Maya drives 12,000 miles. What is her cost per mile?

A. $0.06

B. $0.60

C. $1.67

D. $6.00

GO DEEPER 2 — Comparing total cost of ownership

Question 1 of 5 · Learn and Apply

LEARN

A car repair sinking fund spreads unexpected costs into small monthly amounts.

Maya sets aside $50 a month for repairs. How much is saved in a year?

A. $50

B. $500

C. $600

D. $6,000

GO DEEPER 2 — Comparing total cost of ownership

Question 2 of 5 · Knowledge Check

A set of tires costs $640 and lasts 4 years. What should Maya set aside each month?

A. $13.33

B. $53.33

C. $160.00

D. $2,560.00

GO DEEPER 2 — Comparing total cost of ownership

Question 3 of 5 · Learn and Apply

LEARN

Electric cost = miles × kWh per mile × price per kWh.

An electric car uses 0.3 kWh per mile; electricity costs $0.18 per kWh. A gas car costs $1,400 a year in fuel. For 12,000 miles, how much does the electric car save on fuel?

A. $648

B. $752

C. $1,400

D. $2,048

GO DEEPER 2 — Comparing total cost of ownership

Question 4 of 5 · Knowledge Check

Car X: $22,000, 25 mpg. Car Y: $24,000, 40 mpg. Over 5 years of 12,000 miles a year with gas at $3.50, which costs less for price plus fuel?

A. Car X, by $2,000

B. Car X, by $1,150

C. Car Y, by $3,150

D. Car Y, by $1,150

GO DEEPER 2 — Comparing total cost of ownership

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Many auto parts stores and mechanics can read the warning code, which points to the problem.

A "check engine" light comes on. What is the best first step?

A. Have the code read soon

B. Ignore it until the car stops running completely

C. Disconnect the light so it stops bothering you

D. Sell the car right away at any price

SET 85 · Buying, Financing, and Owning a Vehicle

Leasing vs buying a car

MAIN skill: Explain lease terms and compare the cost of leasing with buying

Outcome FL.CAR.85 · National topic: Spending · NJSLS 9.1.12: CDM, PB

Learning target: Compare the costs and benefits of leasing and buying a vehicle

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Using vs owning (5 questions)
  Why: A lease is paying to use; a loan is paying to own. The difference explains every lease term.
- B2 · Math link → G7-S29-M (Grade 7 7.EE.B.3): Solve multistep problems with positive and negative rational numbers in any form
  Why: Lease costs combine payments, fees, and charges.
- B3 · Math link → G6-S20-M (Grade 6 6.NS.B.3): Divide multi-digit decimals
  Why: Lease payments spread a dollar amount over months.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Inside the lease payment (5 questions)
- Go Deeper 2: Lease or buy: the three-year comparison (5 questions)

Practical skills beyond the standards: Reading a lease; Comparing lease and buy over 3 years

Content status: stable

Source: FTC (Financing or leasing a car) — A lease lets a consumer use a vehicle for a set term; leases have mileage limits, wear-and-tear charges, and early termination costs. https://consumer.ftc.gov/articles/financing-or-leasing-car

MAIN — Explain lease terms and compare the cost of leasing with buying

Question 1 of 5 · Learn and Apply

LEARN

A lease is a long-term rental, often 2 to 4 years. You pay for the car's expected loss in value plus a finance charge, then return it or buy it at a set price.

What does it mean to lease a car?

A. Buying the car outright with one cash payment

B. Paying to use it for a set term, then returning it

C. Borrowing to buy the car and keeping it after payoff

D. Renting a car for one weekend trip

MAIN — Explain lease terms and compare the cost of leasing with buying

Question 2 of 5 · Learn and Apply

LEARN

Leases have mileage limits. Extra miles are charged at a set rate when the car is returned.

A lease allows 10,000 miles a year for 3 years and charges $0.25 for each extra mile. Maya drives 36,000 miles. What is the charge?

A. $1,500

B. $2,500

C. $6,000

D. $9,000

MAIN — Explain lease terms and compare the cost of leasing with buying

Question 3 of 5 · Learn and Apply

LEARN

Capitalized cost is the lease's agreed price. Residual value is the predicted value at the end. The payment covers the depreciation (cap cost − residual) spread over the months, plus a finance charge and tax.

A car has a capitalized cost of $30,000 and a residual value of $18,000 after 36 months. What is the monthly depreciation part of the payment?

A. $333.33

B. $500.00

C. $833.33

D. $12,000.00

MAIN — Explain lease terms and compare the cost of leasing with buying

Question 4 of 5 · Knowledge Check

A lease needs $2,000 at signing and 36 payments of $399. What is the total cost of the lease?

A. $2,399

B. $14,364

C. $16,364

D. $18,364

MAIN — Explain lease terms and compare the cost of leasing with buying

Question 5 of 5 · Learn and Apply

LEARN

Leasing tends to fit drivers who stay under mileage limits, keep the car in good shape, and like changing cars every few years. Buying fits drivers who keep cars a long time.

Who is usually a better fit for leasing?

A. A driver who goes 25,000 miles a year and keeps cars a decade

B. A buyer who wants to customize the car and own it outright

C. A person who wants never to have a monthly car payment

D. A low-mileage driver who wants a new car often

BACKWARD B1 · concept review — Using vs owning

Question 1 of 5 · Learn and Apply

LEARN

The lease contract states a purchase option price, often equal to the residual value.

At the end of a lease, what can the driver usually do?

A. Return the car or buy it at the set price

B. Keep the car free of charge forever

C. Sell the car and keep the money

D. Stop paying and drive it until it finally breaks

BACKWARD B1 · concept review — Using vs owning

Question 2 of 5 · Knowledge Check

In a lease, what is the residual value?

A. The amount paid up front at signing

B. The predicted value at the end

C. The monthly finance charge

D. The car's price when new

BACKWARD B1 · concept review — Using vs owning

Question 3 of 5 · Learn and Apply

LEARN

Lessees return the car in the condition the lease requires. Dents, stains, and worn tires beyond the standard can be charged.

What are "excess wear and tear" charges?

A. Monthly fees for routine oil changes

B. Taxes on the car's registration

C. Fees for damage beyond normal use

D. Charges for driving under the mileage limit

BACKWARD B1 · concept review — Using vs owning

Question 4 of 5 · Knowledge Check

A lease costs $350 a month for 36 months. How much are the payments in total?

A. $386

B. $4,200

C. $10,500

D. $12,600

BACKWARD B1 · concept review — Using vs owning

Question 5 of 5 · Learn and Apply

LEARN

Equity is the value you own. Loan payments build equity; lease payments do not.

After paying off a car loan, the owner has the car. After a lease ends, what does the driver own?

A. Half of the car's value

B. The car, with no further cost

C. Nothing, unless they buy the car

D. A credit toward any future purchase

GO DEEPER 1 — Inside the lease payment

Question 1 of 5 · Learn and Apply

LEARN

Leases state the finance charge as a money factor, a small decimal. Money factor × 2,400 is roughly the equivalent APR.

A lease has a money factor of 0.0025. Multiply by 2,400 to compare with an APR. What APR does it equal?

A. 0.25%

B. 2.5%

C. 6%

D. 24%

GO DEEPER 1 — Inside the lease payment

Question 2 of 5 · Knowledge Check

The monthly finance charge is (cap cost + residual) × money factor. For $30,000 and $18,000 with a money factor of 0.0025, what is it?

A. $30

B. $45

C. $75

D. $120

GO DEEPER 1 — Inside the lease payment

Question 3 of 5 · Knowledge Check

Depreciation is $333.33 a month and the finance charge is $120. What is the monthly payment before tax?

A. $213.33

B. $333.33

C. $453.33

D. $573.33

GO DEEPER 1 — Inside the lease payment

Question 4 of 5 · Learn and Apply

LEARN

If a leased car is totaled early, insurance and GAP coverage pay the leasing company; money paid up front is usually not returned.

Why do some experts advise against a large down payment on a lease?

A. Down payments on leases earn very high interest

B. It may be lost if the car is totaled

C. Leasing companies are not allowed to accept them

D. It always raises the monthly payment

GO DEEPER 1 — Inside the lease payment

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Ending a lease early often triggers large fees, sometimes most of the remaining payments.

Maya wants to end her lease after 18 of 36 months. What should she expect?

A. Early termination charges

B. A refund of every payment made so far

C. No cost, since leases can end at any time

D. Ownership of half the car

GO DEEPER 2 — Lease or buy: the three-year comparison

Question 1 of 5 · Learn and Apply

LEARN

Equity = value − amount owed.

After 3 years of buying, Maya's car is worth $18,000 and she still owes $6,000. What is her equity?

A. $6,000

B. $12,000

C. $18,000

D. $24,000

GO DEEPER 2 — Lease or buy: the three-year comparison

Question 2 of 5 · Learn and Apply

LEARN

Net cost = total paid − equity kept, because the equity is value she still owns.

Over 3 years, buying cost Maya $3,000 down plus 36 payments of $500. Her equity is $12,000. What is the net cost of buying for those 3 years?

A. $9,000

B. $18,000

C. $21,000

D. $33,000

GO DEEPER 2 — Lease or buy: the three-year comparison

Question 3 of 5 · Knowledge Check

Leasing a car for 3 years costs $16,364 in total. Buying has a net cost of $9,000. Which costs less, and by how much?

A. Leasing, by $7,364

B. Buying, by $25,364

C. Leasing, by $9,000

D. Buying, by $7,364

GO DEEPER 2 — Lease or buy: the three-year comparison

Question 4 of 5 · Knowledge Check

Why are lease payments often lower than loan payments on the same car?

A. Leasing companies do not charge any interest

B. Leased cars are exempt from every tax

C. You pay only for the expected depreciation

D. Leases last longer than loans

GO DEEPER 2 — Lease or buy: the three-year comparison

Question 5 of 5 · Knowledge Check

Maya drives 20,000 miles a year and keeps cars for 8 years. Which choice likely costs her less?

A. Buying

B. Leasing, since mileage charges are always waived

C. Leasing a new car every year for eight years

D. Renting daily for eight years

SET 86 · Managing Risk with Insurance

Risk and the purpose of insurance

MAIN skill: Identify risk management strategies and explain how insurance transfers financial risk

Outcome FL.INS.86 · National topic: Managing Risk · NJSLS 9.1.12: RM

Learning target: Explain risk management strategies and how insurance pools and transfers risk

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

B1 · Concept review: Risk, probability, and loss (5 questions)

Why: Insurance decisions compare how likely a loss is with how large it would be.

B2 · Math link → G7-S54-M (Grade 7 7.SP.C.5): Understand probability as a number from 0 to 1 that shows how likely an event is

Why: Risk is described with probabilities.

After 5 of 5 correct, Go Deeper unlocks (a chain):

Go Deeper 1: Reading a policy (5 questions)

Practical skills beyond the standards: Reading a declarations page; Filing a claim

Content status: stable

Source: NAIC (Consumer insurance guides) — Explains auto, home, renters, life, and disability insurance and how deductibles affect premiums. https://content.naic.org/consumer

MAIN — Identify risk management strategies and explain how insurance transfers financial risk

Question 1 of 5 · Learn and Apply

LEARN

Four ways to manage risk: avoid it (do not do the risky thing), reduce it (make a loss less likely or smaller), retain it (pay for losses yourself), or transfer it (pay someone else, usually an insurer, to take the loss). Insurance is risk transfer.

Luis pays a company $40 a month so that if his phone is stolen, the company pays for a replacement. Which risk strategy is this?

A. Avoiding the risk by never owning a phone at all

B. Transferring the risk

C. Reducing the risk by using a stronger case

D. Keeping the risk and paying for losses himself

MAIN — Identify risk management strategies and explain how insurance transfers financial risk

Question 2 of 5 · Learn and Apply

LEARN

Key terms: the premium is what you pay for coverage (monthly or yearly). A claim is your request for payment after a loss. The deductible is the part of a covered loss you pay before the insurer pays.

In insurance, what does the word "premium" mean?

A. The money the insurer pays after a covered loss

B. The part of a loss the policyholder pays first

C. A bonus paid to drivers with no accidents

D. The price paid for coverage

MAIN — Identify risk management strategies and explain how insurance transfers financial risk

Question 3 of 5 · Learn and Apply

LEARN

For most property losses, the policyholder pays the deductible and the insurer pays the rest, up to the policy limit.

A covered loss costs $3,000. Luis's deductible is $500. How much does the insurer pay?

A. $500

B. $2,500

C. $3,000

D. $3,500

MAIN — Identify risk management strategies and explain how insurance transfers financial risk

Question 4 of 5 · Learn and Apply

LEARN

Insurance pools risk: many people each pay a small, predictable premium, and the pool pays the few who have large losses.

How can insurers afford to pay large losses?

A. The government refunds every claim the insurer pays

B. Insurers only sell to people who never have losses

C. Many people's premiums pool together

D. Policyholders repay the claim later with interest

MAIN — Identify risk management strategies and explain how insurance transfers financial risk

Question 5 of 5 · Learn and Apply

LEARN

Insurance matters most for losses that are unlikely but too large to afford. Small, affordable losses are often cheaper to retain, especially with an emergency fund.

Which loss is most sensible to retain (pay yourself) rather than insure?

A. A house fire that destroys everything you own

B. A crash that injures another driver badly

C. A long illness with large hospital bills

D. A $15 phone charger that breaks

BACKWARD B1 · concept review — Risk, probability, and loss

Question 1 of 5 · Knowledge Check

Which word describes a chance of losing money or something of value?

A. Equity

B. Risk

C. Liquidity

D. Principal

BACKWARD B1 · concept review — Risk, probability, and loss

Question 2 of 5 · Learn and Apply

LEARN

Reducing risk makes a loss less likely or less severe, such as seat belts, smoke alarms, or locks.

Wearing a seat belt is which risk strategy?

A. Reducing the risk

B. Transferring the risk to another person

C. Avoiding the risk entirely

D. Retaining the risk on purpose

BACKWARD B1 · concept review — Risk, probability, and loss

Question 3 of 5 · Knowledge Check

An event has a 1 in 50 chance of happening each year. What is that as a percent?

A. 0.02%

B. 2%

C. 20%

D. 50%

BACKWARD B1 · concept review — Risk, probability, and loss

Question 4 of 5 · Knowledge Check

Which situation is risk avoidance?

A. Buying a helmet before riding

B. Choosing not to ride a motorcycle

C. Buying motorcycle insurance before riding

D. Saving to pay for any damage

BACKWARD B1 · concept review — Risk, probability, and loss

Question 5 of 5 · Knowledge Check

Why does an emergency fund help with risk?

A. It replaces the need for any insurance at all

B. It lowers the chance an accident happens

C. It covers small losses and deductibles

D. It earns enough to pay any lawsuit

GO DEEPER 1 — Reading a policy

Question 1 of 5 · Learn and Apply

LEARN

A policy limit is the most an insurer will pay for a covered loss. The deductible is subtracted from the loss first; the insurer then pays the result, but never more than the limit.

A renters policy has a $20,000 limit for personal property. A fire destroys $26,000 of belongings, and the deductible is $500. How much does the insurer pay?

A. $19,500

B. $20,000

C. $25,500

D. $26,000

GO DEEPER 1 — Reading a policy

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Exclusions list what a policy does not cover. Flood insurance, for example, is usually a separate policy.

A policy lists "Exclusions: flood, earthquake." What does that mean?

A. Those losses are not covered

B. Those losses are covered with no deductible

C. Those losses are covered only on weekends

D. Those losses are paid at double the limit

GO DEEPER 1 — Reading a policy

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

The declarations ("dec") page shows who and what is covered, the limits, deductibles, and the premium.

What is the declarations page of a policy?

A. A letter saying a claim was denied

B. A form to cancel the policy

C. A list of every claim you have filed

D. A summary of coverage, limits, and premium

GO DEEPER 1 — Reading a policy

Question 4 of 5 · Learn and Apply

LEARN

Replacement cost policies cost more but pay enough to replace items new.

Replacement cost coverage pays to buy a new item; actual cash value pays the item's value minus depreciation. A 4-year-old TV cost $800 and is now worth $300. Under actual cash value, before any deductible, what is paid?

A. $300

B. $500

C. $800

D. $1,100

GO DEEPER 1 — Reading a policy

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Contact the insurer promptly, take photos, keep receipts, and prevent further damage.

After a covered loss, what is a sound first step in filing a claim?

A. Throw away damaged items before anyone sees them

B. Wait a year to see if more damage appears

C. Document the damage with photos

D. Exaggerate the loss to cover the deductible

SET 87 · Managing Risk with Insurance

Health insurance

MAIN skill: Calculate costs under a health plan and compare plans using premium, deductible, coinsurance, and out-of-pocket maximum

Outcome FL.INS.87 · National topic: Managing Risk · NJSLS 9.1.12: RM

Learning target: Calculate costs under health insurance plans and compare plans using premiums and cost sharing

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Health plan vocabulary (5 questions)
  - Why: Plan costs depend on knowing which term means what.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  - Why: Coinsurance is a percent of the bill.
- B3 · Math link → G7-S29-M (Grade 7 7.EE.B.3): Solve multistep problems with positive and negative rational numbers in any form
  - Why: Out-of-pocket costs combine a deductible, a percent, and a cap.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Comparing health plans (5 questions)
- Go Deeper 2: Using health insurance well (5 questions)

Practical skills beyond the standards: Reading an Explanation of Benefits; Shopping on the state marketplace

Content status: time-sensitive

Source: HealthCare.gov (Glossary) — Defines premium, deductible, copayment, coinsurance, and out-of-pocket maximum; after the out-of-pocket maximum, the plan pays 100% of covered in-network costs for the rest of the plan year. https://www.healthcare.gov/glossary/

Source: HealthCare.gov (Young adults) — Young adults can generally stay on a parent's health plan until age 26. https://www.healthcare.gov/young-adults/children-under-26/

MAIN — Calculate costs under a health plan and compare plans using premium, deductible, coinsurance, and out-of-pocket maximum

Question 1 of 5 · Learn and Apply

LEARN

Health plans share costs. You pay the deductible first. After that, coinsurance means you pay a percent of each bill and the plan pays the rest, until you reach the out-of-pocket maximum. After that, the plan pays 100% of covered costs for the year.

Ana's plan has a $1,500 deductible and 20% coinsurance, with a $5,000 out-of-pocket maximum. She has a $10,000 covered hospital bill. How much does Ana pay?

A. $1,500

B. $2,000

C. $3,200

D. $5,000

MAIN — Calculate costs under a health plan and compare plans using premium, deductible, coinsurance, and out-of-pocket maximum

Question 2 of 5 · Learn and Apply

LEARN

The out-of-pocket maximum caps what you pay for covered in-network care in a plan year (premiums not included).

Ana's plan: $1,500 deductible, 20% coinsurance, $5,000 out-of-pocket maximum. A $40,000 covered bill comes in. How much does Ana pay?

A. $1,500

B. $5,000

C. $8,000

D. $9,200

MAIN — Calculate costs under a health plan and compare plans using premium, deductible, coinsurance, and out-of-pocket maximum

Question 3 of 5 · Learn and Apply

LEARN

A copay is a flat amount, such as $30 for a doctor visit or $10 for a generic prescription.

What is a copay?

A. A set dollar amount for a service

B. A percent of the bill paid after the deductible

C. The monthly price of the plan

D. The yearly limit on what you pay

MAIN — Calculate costs under a health plan and compare plans using premium, deductible, coinsurance, and out-of-pocket maximum

Question 4 of 5 · Learn and Apply

LEARN

Under the Affordable Care Act, young adults can generally stay on a parent's plan until age 26, even if married, not living at home, or not a dependent for taxes.

Ana is 22 and her parent has a family health plan. Under federal rules, until what age can she generally stay on it?

A. 18

B. 21

C. 26

D. 30

MAIN — Calculate costs under a health plan and compare plans using premium, deductible, coinsurance, and out-of-pocket maximum

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Insurers negotiate lower prices with in-network providers. Out-of-network care may cost much more or not be covered.

Why does staying in network usually matter?

A. Out-of-network doctors are not licensed to treat patients

B. In-network care costs the patient less

C. In-network care never needs any deductible

D. Network rules only matter for dental care

BACKWARD B1 · concept review — Health plan vocabulary

Question 1 of 5 · Knowledge Check

Which health plan cost is paid every month, even if you never see a doctor?

A. The deductible, paid before coverage starts

B. Coinsurance, a percent of bills after the deductible

C. A copay, charged per visit

D. The premium

BACKWARD B1 · concept review — Health plan vocabulary

Question 2 of 5 · Knowledge Check

20% of a $500 bill is...

A. $10

B. $20

C. $100

D. $400

BACKWARD B1 · concept review — Health plan vocabulary

Question 3 of 5 · Knowledge Check

Ana has paid $900 of her $1,500 deductible. How much more must she pay before coinsurance starts?

A. $600

B. $900

C. $1,500

D. $2,400

BACKWARD B1 · concept review — Health plan vocabulary

Question 4 of 5 · Learn and Apply

LEARN

Once you reach the out-of-pocket maximum, the plan pays 100% of covered in-network costs for the rest of the plan year. Premiums are still owed.

After Ana reaches her out-of-pocket maximum, what does she pay for covered in-network care that year?

A. The full price of each visit

B. 20% of each bill as before

C. $0

D. The deductible again for each visit

BACKWARD B1 · concept review — Health plan vocabulary

Question 5 of 5 · Knowledge Check

A plan has a high deductible but a low premium. Who might it suit?

A. A healthy person with savings

B. Someone expecting surgery soon with no savings

C. Someone with frequent specialist visits

D. Someone who cannot afford any surprise bill

GO DEEPER 1 — Comparing health plans

Question 1 of 5 · Learn and Apply

LEARN

Compare plans by total yearly cost: 12 × premium + what you pay for care.

Plan A: $100 a month, $3,000 deductible. Plan B: $250 a month, $500 deductible. With no medical bills all year, how much less does Plan A cost?

A. $150

B. $1,800

C. $2,500

D. $4,200

GO DEEPER 1 — Comparing health plans

Question 2 of 5 · Knowledge Check

Plan A: $1,200 a year in premiums, $3,000 deductible. Plan B: $3,000 a year in premiums, $500 deductible, then 10% coinsurance. With $2,000 of bills, which costs less in total?

A. Plan B, by $450

B. Plan A, by $1,800

C. Plan B, by $1,500

D. Plan A, by $450

GO DEEPER 1 — Comparing health plans

Question 3 of 5 · Knowledge Check

Plan A: $1,200 premiums, $3,000 deductible, then 20%. Plan B: $3,000 premiums, $500 deductible, then 10%. With $10,000 of bills (below both maximums), which costs less?

A. Plan A, by $1,150

B. Plan B, by $1,150

C. Plan A, by $1,800

D. Plan B, by $2,950

GO DEEPER 1 — Comparing health plans

Question 4 of 5 · Learn and Apply

LEARN

An HSA lets people covered by a qualifying high-deductible health plan save pre-tax money for medical costs. Unused money carries over year to year.

Ana's health plan has a $500 deductible, below the minimum for a qualifying high-deductible plan. Can she open a new health savings account (HSA)?

A. Yes; any health plan qualifies

B. Yes, once she turns 65

C. Yes, if she adds a dental plan

D. No; her plan does not qualify

GO DEEPER 1 — Comparing health plans

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Some states run their own health insurance marketplace, such as Get Covered New Jersey; others use HealthCare.gov. Open enrollment is once a year; life events such as losing coverage open a special enrollment period.

Ana's job does not offer health insurance. Which statement about shopping for an individual plan in New Jersey is accurate?

A. New Jersey runs its own state marketplace

B. Only HealthCare.gov serves New Jersey residents

C. Individual plans can be bought only through social media ads

D. She must wait until she turns 65

GO DEEPER 2 — Using health insurance well

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

An EOB is not a bill; it explains what the plan paid. Compare it with the provider's bill before paying.

An Explanation of Benefits (EOB) says: billed $400; plan discount $150; plan paid $200; you may owe $50. What should Ana pay?

A. $50

B. $200

C. $250

D. $400

GO DEEPER 2 — Using health insurance well

Question 2 of 5 · Knowledge Check

A generic drug costs $10 and the brand-name version costs $45 a month. How much does choosing generic save in a year?

A. $35

B. $420

C. $540

D. $660

GO DEEPER 2 — Using health insurance well

Question 3 of 5 · Knowledge Check · Practical how-to

Ana has a sore throat on a weekend. Which choice is usually cheapest for a non-emergency?

A. The hospital emergency room for every minor illness

B. An urgent care or telehealth visit

C. Waiting until it becomes an emergency

D. Buying antibiotics online without a prescription

GO DEEPER 2 — Using health insurance well

Question 4 of 5 · Learn and Apply

LEARN

Most plans cover listed preventive services in network with no cost sharing.

Preventive care such as a yearly checkup is often covered at what cost to the patient in network?

A. The full price, since it is optional

B. Double the usual copay

C. $0

D. The whole deductible

GO DEEPER 2 — Using health insurance well

Question 5 of 5 · Knowledge Check · Practical how-to

A bill shows a charge for a test Ana never had. What should she do?

A. Pay it so her credit is protected
B. Ignore it, since errors fix themselves
C. Ask the provider for an itemized bill
D. Ask the insurer to pay it again

SET 88 · Managing Risk with Insurance

Auto insurance

MAIN skill: Explain auto coverages and calculate what liability limits pay

Outcome FL.INS.88 · National topic: Managing Risk · NJSLS 9.1.12: RM

Learning target: Explain types of auto insurance coverage and how limits and deductibles affect costs

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

B1 · Concept review: Who and what each coverage protects (5 questions)

Why: Auto policies combine coverages that protect different people and property.

B2 · Math link → G7-S25-M (Grade 7 7.NS.A.3): Solve real-world problems with the four operations on rational numbers

Why: Coverage questions subtract deductibles and compare amounts with limits.

After 5 of 5 correct, Go Deeper unlocks (a chain):

Go Deeper 1: Choosing auto coverage (5 questions)

Practical skills beyond the standards: What to do after a crash; Comparing auto quotes

Content status: time-sensitive

Source: New Jersey Department of Banking and Insurance — New Jersey requires auto liability coverage and personal injury protection (PIP); minimum required limits are set by state law and have changed in recent years. https://www.nj.gov/dobi/

Source: NAIC (Consumer insurance guides) — Explains auto, home, renters, life, and disability insurance and how deductibles affect premiums. https://content.naic.org/consumer

MAIN — Explain auto coverages and calculate what liability limits pay

Question 1 of 5 · Learn and Apply

LEARN

Liability coverage pays for injuries and damage you cause to others. Limits like 25/50/25 mean $25,000 per injured person, $50,000 for all injuries in one crash, and $25,000 for property damage. The driver can owe anything above the limits.

A policy has liability limits of 25/50/25 (thousands). Luis causes a crash that injures one person with $40,000 of medical bills. How much might Luis owe himself?

A. $0

B. $10,000

C. $15,000

D. $40,000

MAIN — Explain auto coverages and calculate what liability limits pay

Question 2 of 5 · Learn and Apply

LEARN

Collision pays for damage to your car from a crash, minus the deductible. Comprehensive covers non-crash damage (theft, fire, storms, hitting a deer).

Which coverage pays to fix Luis's own car after he hits a pole?

A. Collision

B. Liability, which pays for damage to others

C. Comprehensive, which covers theft, fire, and hail

D. Uninsured motorist, for crashes with uninsured drivers

MAIN — Explain auto coverages and calculate what liability limits pay

Question 3 of 5 · Learn and Apply

LEARN

Comprehensive coverage pays for damage to your car that is not from a crash: theft, fire, falling objects, storms, and hitting an animal.

A tree branch falls on Luis's parked car in a storm. Which coverage applies?

A. Collision, because the car was hit by something

B. Liability, because someone owns the tree

C. Personal injury protection

D. Comprehensive

MAIN — Explain auto coverages and calculate what liability limits pay

Question 4 of 5 · Learn and Apply

LEARN

Auto coverages: liability pays for harm you cause to others; collision repairs your car after a crash; personal injury protection (PIP), required in no-fault states such as New Jersey, pays your own medical costs no matter who caused the crash.

New Jersey is a "no-fault" state. Which coverage pays the medical bills of Luis and his passengers after a crash, regardless of fault?

A. Collision, which pays to fix his own car

B. Personal injury protection (PIP)

C. Liability, which pays for harm he causes to others

D. Gap coverage, which pays a loan balance

MAIN — Explain auto coverages and calculate what liability limits pay

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Premiums depend on age, driving record, the car, where you live, coverage chosen, and discounts (good student, safe driver courses, bundling).

Which choice usually lowers a teen driver's premium?

A. Good grades and a clean driving record

B. Driving a powerful sports car

C. Letting the policy lapse for a few months

D. Getting a speeding ticket early

BACKWARD B1 · concept review — Who and what each coverage protects

Question 1 of 5 · Knowledge Check

Liability coverage pays for…

A. Repairs to your own car only

B. Your own phone if stolen from the car

C. Harm you cause to others

D. Routine oil changes

BACKWARD B1 · concept review — Who and what each coverage protects

Question 2 of 5 · Knowledge Check

In 25/50/25, what does the last 25 mean?

A. $25 deductible for any claim

B. 25 days to report a claim

C. $25,000 per injured person

D. $25,000 for property damage

BACKWARD B1 · concept review — Who and what each coverage protects

Question 3 of 5 · Knowledge Check

Luis's collision deductible is $1,000. Repairs cost $3,800. What does insurance pay?

A. $1,000

B. $2,800

C. $3,800

D. $4,800

BACKWARD B1 · concept review — Who and what each coverage protects

Question 4 of 5 · Knowledge Check

Why is driving without required insurance a serious problem?

A. It is allowed if you drive carefully

B. It is illegal and leaves you personally liable

C. It matters only if you cause a crash

D. Other drivers must pay for the crashes you cause

BACKWARD B1 · concept review — Who and what each coverage protects

Question 5 of 5 · Knowledge Check

An uninsured driver hits Luis. Which coverage helps him?

A. His liability coverage, which pays others

B. Comprehensive, for theft and storms

C. Collision, which waives the deductible

D. Uninsured motorist coverage

GO DEEPER 1 — Choosing auto coverage

Question 1 of 5 · Learn and Apply

LEARN

Collision pays up to the car's actual cash value minus the deductible. On an older car, it can cost close to what it could ever pay.

Luis's car is worth $2,000. Collision coverage costs $600 a year with a $500 deductible. What is the most collision would pay in a total loss?

A. $600

B. $1,500

C. $2,000

D. $2,500

GO DEEPER 1 — Choosing auto coverage

Question 2 of 5 · Learn and Apply

LEARN

A higher deductible lowers the premium. Break-even years = extra deductible ÷ yearly savings.

Raising the deductible from $500 to $1,000 lowers Luis's premium by $150 a year. How many claim-free years until the savings cover the extra $500 risk?

A. About 0.3 years

B. About 3.3 years

C. About 6.7 years

D. About 1.5 years

GO DEEPER 1 — Choosing auto coverage

Question 3 of 5 · Knowledge Check

Why do many experts suggest liability limits above the state minimum?

A. A serious crash can cost far more

B. Minimum limits are illegal in most states

C. Higher limits always cost double

D. Liability only matters for commercial drivers

GO DEEPER 1 — Choosing auto coverage

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Check for injuries, call police if required, exchange names, insurance, and plate numbers, and take photos.

After a minor crash, which step should Luis take?

A. Leave without stopping if no one seems hurt

B. Admit fault for everything right away

C. Exchange insurance information

D. Agree to pay in cash without documenting anything

GO DEEPER 1 — Choosing auto coverage

Question 5 of 5 · Knowledge Check

Two quotes: $1,800 a year with $50,000/$100,000 limits, and $1,560 with state minimums. How much more does the higher coverage cost per month?

A. $20

B. $130

C. $150

D. $240

SET 89 · Managing Risk with Insurance

Property, life, and disability insurance

MAIN skill: Explain property, life, and disability insurance and estimate coverage needs

Outcome FL.INS.89 · National topic: Managing Risk · NJSLS 9.1.12: RM

Learning target: Compare property, life, and disability insurance and estimate coverage needs

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Matching insurance to the risk (5 questions)
  Why: Each type of insurance protects against one kind of loss.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  Why: Benefits are often a percent of income.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Estimating coverage needs (5 questions)

Practical skills beyond the standards: Estimating life insurance needs

Content status: stable

Source: NAIC (Consumer insurance guides) — Explains auto, home, renters, life, and disability insurance and how deductibles affect premiums. https://content.naic.org/consumer

MAIN — Explain property, life, and disability insurance and estimate coverage needs

Question 1 of 5 · Learn and Apply

LEARN

Each insurance covers a different loss: health insurance pays for medical care; life insurance pays beneficiaries at death; disability insurance pays a share of income, often about 60%, while you cannot work. Government disability benefits have strict rules and waiting periods.

Which insurance replaces part of your paycheck if illness or injury keeps you from working?

A. Life insurance, which pays when someone dies

B. Disability insurance

C. Homeowners insurance, which covers the house

D. Health insurance, which pays medical bills

MAIN — Explain property, life, and disability insurance and estimate coverage needs
Question 2 of 5 · Knowledge Check

Ana earns $4,000 a month. Her disability policy pays 60% of income. What is her monthly benefit?

A. $240

B. $1,600

C. $2,400

D. $4,000

MAIN — Explain property, life, and disability insurance and estimate coverage needs

Question 3 of 5 · Learn and Apply

LEARN

Life insurance pays a death benefit to beneficiaries. Term life covers a set number of years and is much cheaper. Whole (permanent) life lasts for life and includes a cash value, with much higher premiums.

What is the main difference between term and whole life insurance?

A. Term covers only accidents; whole life covers only illness

B. Term is for children; whole life is for adults

C. Term covers a set period; whole life lasts for life

D. Term pays while you live; whole life pays at death

MAIN — Explain property, life, and disability insurance and estimate coverage needs

Question 4 of 5 · Learn and Apply

LEARN

Life insurance protects people who depend on your income. A common estimate is several times yearly income, adjusted for debts and savings.

Who most needs life insurance?

A. A teenager with no dependents and no debts

B. A retiree whose savings cover the spouse's needs

C. A single adult whose only bills are their own

D. A parent whose income supports young children

MAIN — Explain property, life, and disability insurance and estimate coverage needs

Question 5 of 5 · Learn and Apply

LEARN

Renters insurance covers belongings and liability; the landlord insures the building. Homeowners insurance also covers the structure. Lenders require it for a mortgage.

What does homeowners insurance usually cover that renters insurance does not?

A. The building itself

B. Personal belongings such as a laptop

C. Liability if a guest is hurt

D. Living costs after a covered loss

BACKWARD B1 · concept review — Matching insurance to the risk

Question 1 of 5 · Knowledge Check

Which insurance pays beneficiaries when the insured person dies?

A. Life insurance

B. Disability insurance

C. Renters insurance

D. Auto insurance

Question 3 of 5 · Knowledge Check

A 30-year-old buys $500,000 of 20-year term life for $30 a month. What is the total premium over 20 years?

A. $360

B. $600

C. $7,200

D. $500,000

GO DEEPER 1 — Estimating coverage needs

Question 4 of 5 · Learn and Apply

LEARN

The elimination (waiting) period is how long you must be disabled before benefits begin. An emergency fund covers that gap.

A disability policy has a 90-day elimination period. What does that mean?

A. The policy ends after 90 days

B. Benefits start after 90 days of disability

C. Claims must be filed within 90 minutes of an injury

D. The premium is free for 90 days

GO DEEPER 1 — Estimating coverage needs

Question 5 of 5 · Knowledge Check

Why might a worker add personal disability insurance on top of a workplace plan?

A. Workplace plans always replace 100% of income

B. Government benefits are automatic and immediate

C. Disability insurance also pays medical bills

D. To replace more income

SET 90 · Managing Risk with Insurance

Expected loss and choosing coverage

MAIN skill: Use probability and expected value to evaluate premiums, deductibles, and extended warranties

Outcome FL.INS.90 · National topic: Managing Risk · NJSLS 9.1.12: RM, FP

Learning target: Use probability and expected value to evaluate insurance and warranty choices

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Expected value (5 questions)
  - Why: Expected loss multiplies a probability by an amount.
- B2 · Math link → G7-S55-M (Grade 7 7.SP.C.6): Estimate a probability from relative frequency and make predictions
  - Why: Insurers estimate probabilities from claim data.
- B3 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  - Why: Expected loss multiplies an amount by a percent probability.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: How insurers set prices (5 questions)

Practical skills beyond the standards: Deciding on extended warranties; Choosing a deductible

Content status: stable

Source: NAIC (Consumer insurance guides) — Explains auto, home, renters, life, and disability insurance and how deductibles affect premiums. https://content.naic.org/consumer

MAIN — Use probability and expected value to evaluate premiums, deductibles, and extended warranties

Question 1 of 5 · Learn and Apply

LEARN

Expected loss = probability × size of the loss. It is the average loss per year over many people or many years.

Each year there is a 2% chance of a $5,000 loss. What is the expected yearly loss?

A. $10

B. $100

C. $1,000

D. $5,000

MAIN — Use probability and expected value to evaluate premiums, deductibles, and extended warranties

Question 2 of 5 · Learn and Apply

LEARN

Insurers price premiums above expected losses to cover costs and profit. Buying insurance makes sense for losses you could not afford, not for small ones.

The expected loss on a phone is $60 a year, but protection costs $120 a year. What does that suggest?

A. On average, the plan costs more than it pays

B. The plan is guaranteed to save money every year

C. The phone is certain to break this year

D. Insurers lose money on every plan they sell

MAIN — Use probability and expected value to evaluate premiums, deductibles, and extended warranties

Question 3 of 5 · Knowledge Check

A $40 extended warranty on a $60 blender covers 2 extra years. Which is usually wiser if Ana has an emergency fund?

A. Buy it, because warranties always pay for themselves

B. Buy two, to double the coverage

C. Skip it and retain the risk

D. Return the blender and never buy appliances

MAIN — Use probability and expected value to evaluate premiums, deductibles, and extended warranties

Question 4 of 5 · Learn and Apply

LEARN

Higher deductibles mean lower premiums. Choose a deductible your emergency fund can cover.

Ana compares deductibles: $500 deductible, premium $1,200; $1,000 deductible, premium $1,050. Which yearly savings come with the higher deductible?

A. $150

B. $500

C. $1,050

D. $2,250

MAIN — Use probability and expected value to evaluate premiums, deductibles, and extended warranties

Question 5 of 5 · Learn and Apply

LEARN

Expected extra cost = probability of a claim × extra deductible. Compare it with the premium savings.

With a 10% chance each year of a claim that would hit the deductible, is the $1,000 deductible (saving $150 a year in premiums, extra $500 cost per claim) a good bet on average?

A. No; it costs about $350 a year more

B. No; it costs $500 more every year

C. Yes; it saves about $100 a year

D. Yes; it saves $650 every year

BACKWARD B1 · concept review — Expected value

Question 1 of 5 · Knowledge Check

A 5% chance of losing $2,000 has an expected loss of…

A. $10

B. $100

C. $1,000

D. $2,000

Question 3 of 5 · Learn and Apply

LEARN

Relative frequency estimates probability: events ÷ total.

Out of 1,000 drivers, 30 file a claim in a year. What is the estimated probability of a claim?

A. 0.3%

B. 3%

C. 30%

D. 97%

BACKWARD B1 · concept review — Expected value

Question 4 of 5 · Knowledge Check

Why are premiums usually higher than the expected loss?

A. Insurers do not know the probabilities

B. Insurers add costs and profit

C. Expected loss is always zero

D. The law requires premiums to double losses

BACKWARD B1 · concept review — Expected value

Question 5 of 5 · Knowledge Check

An emergency fund makes which choice safer?

A. A higher deductible

B. Dropping liability insurance entirely

C. Skipping health coverage

D. Lowering every policy limit

GO DEEPER 1 — How insurers set prices

Question 1 of 5 · Learn and Apply

LEARN

Across many policies, actual losses come close to the expected total. This is the law of large numbers.

An insurer covers 10,000 homes. Each has a 1% chance of a $50,000 loss. What total claims should it expect?

A. $50,000

B. $500,000

C. $5,000,000

D. $500,000,000

GO DEEPER 1 — How insurers set prices

Question 2 of 5 · Knowledge Check

Expected claims are $5,000,000 for 10,000 homes. What is the expected claim cost per home?

A. $50

B. $500

C. $5,000

D. $50,000

GO DEEPER 1 — How insurers set prices

Question 3 of 5 · Knowledge Check

The insurer adds 25% for expenses and profit to a $500 expected claim cost. What is the premium?

A. $125

B. $500

C. $525

D. $625

GO DEEPER 1 — How insurers set prices

Question 4 of 5 · Knowledge Check

Why do drivers with past accidents usually pay more?

A. Insurers punish drivers to make an example
B. Accidents raise everyone's premiums equally
C. The law sets a fixed fine added to premiums
D. Their estimated chance of a claim is higher

GO DEEPER 1 — How insurers set prices

Question 5 of 5 · Knowledge Check

Why does insurance work better for large groups than for a single person?

A. Losses become predictable on average

B. Each person's losses become certain

C. Large groups never have any losses at all

D. Premiums no longer need to be paid

SET 91 · Paying for College and Training

Cost of attendance and net price

MAIN skill: Calculate cost of attendance and net price, and compare colleges by what a family will actually pay

Outcome FL.COLLEGE.91 · National topic: Spending · NJSLS 9.1.12: PB, CDM

Learning target: Calculate cost of attendance and net price to compare postsecondary options

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

B1 · Concept review: Comparing costs fairly (5 questions)

Why: Net price comparisons subtract only money that never has to be repaid.

B2 · Math link → G7-S29-M (Grade 7 7.EE.B.3): Solve multistep problems with positive and negative rational numbers in any form

Why: COA and net price add costs and subtract aid.

Go Deeper 1: Lowering the cost (5 questions)

Practical skills beyond the standards: Reading a financial aid award letter; Using a net price calculator

Content status: stable

Source: U.S. Department of Education (College Navigator / net price calculators) — Colleges must post a net price calculator that estimates cost of attendance minus grants and scholarships. https://nces.ed.gov/collegenavigator/

MAIN — Calculate cost of attendance and net price, and compare colleges by what a family will actually pay

Question 1 of 5 · Learn and Apply

LEARN

Cost of attendance (COA) is a college's estimate of a full year: tuition and fees, housing and food, books and supplies, transportation, and personal expenses.

College A lists tuition $14,000, housing and food $13,000, books $1,200, transportation $1,800, and personal costs $2,000. What is the cost of attendance?

A. $14,000

B. $27,000

C. $30,200

D. $32,000

MAIN — Calculate cost of attendance and net price, and compare colleges by what a family will actually pay

Question 2 of 5 · Learn and Apply

LEARN

Net price = cost of attendance − grants and scholarships (gift aid, which does not have to be repaid). Loans are not subtracted, because they must be paid back.

College A's COA is $32,000. Kira receives a $9,000 grant and a $3,000 scholarship. What is her net price?

A. $12,000

B. $20,000

C. $23,000

D. $32,000

MAIN — Calculate cost of attendance and net price, and compare colleges by what a family will actually pay

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Award letters mix gift aid with "self-help" aid: work-study (money you earn at a job) and loans (money you repay). Only gift aid lowers the net price.

College B's award lists COA $45,000; grants $22,000; work-study $2,500; loans $5,500. What is the net price?

A. $15,000

B. $20,500

C. $23,000

D. $45,000

MAIN — Calculate cost of attendance and net price, and compare colleges by what a family will actually pay

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Every college must post a net price calculator. It estimates what a student like you would pay after grants, which can differ a lot from the listed price.

A private college lists $60,000 and a state college lists $30,000. What should Kira do before ruling out the private college?

A. Assume the sticker price is what every family pays

B. Choose the cheaper sticker price without comparing aid

C. Run each college's net price calculator

D. Apply only to the more expensive one, since it must be better

MAIN — Calculate cost of attendance and net price, and compare colleges by what a family will actually pay

Question 5 of 5 · Learn and Apply

LEARN

Gift aid (grants and scholarships) does not have to be repaid. Self-help aid (loans and work-study) must be repaid or earned.

Which counts as gift aid?

A. A federal Direct Unsubsidized Loan

B. A need-based grant

C. A campus job through work-study

D. A loan a parent takes out for the student

BACKWARD B1 · concept review — Comparing costs fairly

Question 1 of 5 · Knowledge Check

Which aid must be repaid?

A. A scholarship for good grades

B. A state grant based on need

C. A tuition waiver from the college

D. A student loan

BACKWARD B1 · concept review — Comparing costs fairly

Question 2 of 5 · Knowledge Check

Tuition $10,000 and fees $1,500. What is tuition plus fees?

A. $8,500

B. $10,150

C. $11,500

D. $15,000

BACKWARD B1 · concept review — Comparing costs fairly

Question 3 of 5 · Knowledge Check

COA $25,000 minus $10,000 of grants is...

A. $10,000

B. $15,000

C. $25,000

D. $35,000

BACKWARD B1 · concept review — Comparing costs fairly

Question 4 of 5 · Learn and Apply

LEARN

Federal Work-Study helps students find part-time jobs; pay is earned over the year, not given up front.

What is work-study?

A. A grant applied to tuition automatically

B. A part-time job that pays the student

C. A loan with no interest

D. Credit for an internship class

BACKWARD B1 · concept review — Comparing costs fairly

Question 5 of 5 · Knowledge Check

Why compare net price instead of sticker price?

A. Sticker price already includes every scholarship

B. Net price is set by the government for all colleges

C. Net price already subtracts the loans offered

D. Aid can change the true cost a lot

GO DEEPER 1 — Lowering the cost

Question 1 of 5 · Learn and Apply

LEARN

Starting at a community college and transferring can save a lot. New Jersey colleges have transfer agreements so credits count toward a degree.

Kira spends 2 years at a community college ($5,000 a year net) and 2 years at a state college ($20,000 a year net), instead of 4 years at the state college. How much does she save?

A. $15,000

B. $30,000

C. $50,000

D. $80,000

GO DEEPER 1 — Lowering the cost

Question 2 of 5 · Knowledge Check

Kira earns 12 college credits in high school through dual enrollment. A college charges $400 a credit. How much tuition might she save?

A. $412

B. $480

C. $4,800

D. $48,000

GO DEEPER 1 — Lowering the cost

Question 3 of 5 · Knowledge Check

Living at home saves $13,000 a year in housing and food, but commuting costs $2,500 a year. What is the net yearly savings?

A. $2,500

B. $10,500

C. $13,000

D. $15,500

GO DEEPER 1 — Lowering the cost

Question 4 of 5 · Learn and Apply · Practical how-to

LEARN

Legitimate scholarships do not charge fees or guarantee awards. Free searches are offered by schools, libraries, and the U.S. Department of Labor's CareerOneStop.

Which is a red flag when searching for scholarships?

A. An essay about your goals

B. A deadline for submitting

C. A fee to apply for a "guaranteed" scholarship

D. A request for your transcript

GO DEEPER 1 — Lowering the cost

Question 5 of 5 · Learn and Apply

LEARN

A 529 plan lets families invest for education; earnings are tax-free when used for qualified costs. New Jersey's plan is NJBEST.

A 529 plan is used for…

A. Saving for education with tax advantages

B. Paying monthly tuition with a low-interest card

C. Retirement only, with penalties for college

D. Borrowing at a low rate

SET 92 · Paying for College and Training

The FAFSA and financial aid

MAIN skill: Explain how to apply for financial aid and the types of federal, state, and school aid

Outcome FL.COLLEGE.92 · National topic: Spending · NJSLS 9.1.12: PB, FI

Learning target: Explain the process and types of financial aid for postsecondary education

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

B1 · Concept review: Kinds of financial aid (5 questions)

Why: Understanding the FAFSA requires knowing what aid it unlocks.

After 5 of 5 correct, Go Deeper unlocks (a chain):

Go Deeper 1: After the FAFSA (5 questions)

Practical skills beyond the standards: Filing the FAFSA; Appealing an aid offer

Content status: time-sensitive

Source: Federal Student Aid (FAFSA) — The FAFSA is the free application for federal grants, work-study, and loans; it calculates a Student Aid Index (SAI). Never pay to file it. https://studentaid.gov/h/apply-for-aid/fafsa

Source: New Jersey Higher Education Student Assistance Authority (HESAA) — New Jersey state aid programs, such as the Tuition Aid Grant (TAG), use the FAFSA or the New Jersey Alternative Financial Aid Application. https://www.hesaa.org/

MAIN — Explain how to apply for financial aid and the types of federal, state, and school aid

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

The Free Application for Federal Student Aid (FAFSA) is used for federal grants (such as the Pell Grant), work-study, and federal loans. Many states and colleges use it for their own aid. It is free; never pay to file.

Kira wants federal grants, work-study, and federal loans for college. What should she do first?

A. Pay a service to apply for aid for her

B. Apply for a private student loan

C. Wait for colleges to send aid without applying

D. File the FAFSA

MAIN — Explain how to apply for financial aid and the types of federal, state, and school aid

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

The FAFSA is filed for each school year. Some state and school aid runs out, so deadlines and early filing matter. Check each college's and your state's deadline.

Why should Kira file the FAFSA as early as she can?

A. Filing late adds interest to every grant

B. Early filers are guaranteed a full scholarship

C. Some aid is limited and given out early

D. The FAFSA can be filed only once in a lifetime

MAIN — Explain how to apply for financial aid and the types of federal, state, and school aid

Question 3 of 5 · Learn and Apply

LEARN

The FAFSA calculates a Student Aid Index (SAI), which replaced the Expected Family Contribution. Colleges figure need as cost of attendance − SAI (and other aid).

Two students have the same cost of attendance. Student A's Student Aid Index (SAI) is $2,000; Student B's is $15,000. Who shows more financial need?

A. Student B

B. Student A

C. They show the same need

D. Neither, because the SAI is a credit score

MAIN — Explain how to apply for financial aid and the types of federal, state, and school aid

Question 4 of 5 · Learn and Apply

LEARN

Financial need = cost of attendance − Student Aid Index.

Kira's COA is $30,000 and her SAI is $8,000. What is her financial need?

A. $8,000

B. $22,000

C. $30,000

D. $38,000

MAIN — Explain how to apply for financial aid and the types of federal, state, and school aid

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

You create a StudentAid.gov account (FSA ID) and provide personal and tax information; parents may be "contributors" who consent to share tax data.

Which information is needed to complete the FAFSA?

A. Tax information for the student and contributors

B. Your Social Security card number shared on social media

C. A bank loan already approved

D. Your college acceptance letter

BACKWARD B1 · concept review — Kinds of financial aid

Question 1 of 5 · Knowledge Check

A Pell Grant is...

A. Federal need-based aid that is not repaid

B. A private loan from a bank

C. A merit scholarship awarded by one college

D. A tax credit for college costs

BACKWARD B1 · concept review — Kinds of financial aid

Question 2 of 5 · Knowledge Check

Merit aid is based on…

A. Only family income

B. Achievement, such as grades or talent

C. How much a student borrows

D. The student's Student Aid Index

BACKWARD B1 · concept review — Kinds of financial aid

Question 3 of 5 · Learn and Apply

LEARN

States offer their own aid. In New Jersey, HESAA runs programs such as the Tuition Aid Grant (TAG).

New Jersey's Tuition Aid Grant (TAG) is an example of…

A. A federal loan

B. A private scholarship

C. State gift aid

D. A work-study job

BACKWARD B1 · concept review — Kinds of financial aid
Question 4 of 5 · Knowledge Check

How often should a college student file the FAFSA?

A. Only once, before freshman year
B. Only if family income changes
C. Every four years
D. Every year

BACKWARD B1 · concept review — Kinds of financial aid

Question 5 of 5 · Knowledge Check

$30,000 − $12,000 = ?

A. $12,000

B. $18,000

C. $28,000

D. $42,000

GO DEEPER 1 — After the FAFSA

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

Compare award letters by net price (COA − gift aid), then look at how much would be borrowed.

Two award letters: College A net price $18,000 with $5,500 in loans offered; College B net price $15,000 with $9,000 in loans offered. Which has the lower net price?

A. College B, by $3,000

B. College A, by $3,000

C. College B, by $3,500

D. College A, by $3,500

GO DEEPER 1 — After the FAFSA

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Financial aid administrators can adjust aid for special circumstances with documentation.

A family's income dropped sharply after the year used on the FAFSA. What can they do?

A. Nothing; aid can never change

B. Ask the aid office for a professional judgment review

C. File a second FAFSA with made-up numbers

D. Wait until next year to mention it

GO DEEPER 1 — After the FAFSA

Question 3 of 5 · Knowledge Check

A scholarship's rules say it is renewable if the student keeps a 3.0 GPA. Kira's GPA falls to 2.8. What likely happens?

A. It is paused but returns automatically next term

B. It turns into a loan she must repay

C. She may lose the scholarship

D. Nothing, since rules apply only to freshmen

GO DEEPER 1 — After the FAFSA

Question 4 of 5 · Knowledge Check

A $10,000 scholarship is renewable for 4 years. What is its total value if kept every year?

A. $2,500

B. $10,000

C. $14,000

D. $40,000

GO DEEPER 1 — After the FAFSA

Question 5 of 5 · Knowledge Check

Federal aid has a "satisfactory academic progress" rule. What does that require?

A. Earning straight A's

B. Living on campus

C. Taking at least 18 credits each term

D. Passing enough classes at a minimum GPA

SET 93 · Paying for College and Training

Student loans: federal, private, and interest

MAIN skill: Compare federal and private student loans and calculate interest that accrues during school

Outcome FL.COLLEGE.93 · National topic: Managing Credit · NJSLS 9.1.12: CDM, FI

Learning target: Compare federal and private student loans and calculate interest that accrues during school

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Simple interest over time (5 questions)
  - Why: Accrued interest on student loans uses $I = P \times r \times t$.
- B2 · Math link → G7-S10-M (Grade 7 7.RP.A.3): Find simple interest
  - Why: In-school interest on unsubsidized loans is simple interest.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Borrowing wisely (5 questions)

Practical skills beyond the standards: Reading a Master Promissory Note

Content status: time-sensitive

Source: Federal Student Aid (Loan types) — Interest on Direct Subsidized Loans is paid by the government while the student is in school at least half-time; Direct Unsubsidized Loans accrue interest from disbursement. Federal loan rates are fixed for the life of each loan and set each year. https://studentaid.gov/understand-aid/types/loans

Source: CFPB (Private student loans) — Private student loans may have variable rates, require a cosigner, and lack federal protections such as income-driven repayment. https://www.consumerfinance.gov/consumer-tools/student-loans/

MAIN — Compare federal and private student loans and calculate interest that accrues during school

Question 1 of 5 · Learn and Apply

LEARN

On a Direct Unsubsidized Loan, interest accrues (builds) from the day the money is paid out, even during school. Simple interest = principal × rate × time.

Kira borrows a $5,500 unsubsidized loan at 6%. Interest builds for 4 years while she is in school. How much simple interest accrues?

A. $0

B. $330

C. $1,320

D. $6,820

MAIN — Compare federal and private student loans and calculate interest that accrues during school

Question 2 of 5 · Learn and Apply

LEARN

When unpaid interest is added to the principal, it is "capitalized." Future interest is then charged on the larger balance.

Kira's $5,500 loan has $1,320 of unpaid interest that is added to the balance when repayment begins. What is the new balance?

A. $1,320

B. $4,180

C. $5,500

D. $6,820

MAIN — Compare federal and private student loans and calculate interest that accrues during school

Question 3 of 5 · Learn and Apply

LEARN

For Direct Subsidized Loans (need-based), the government pays the interest while the student is in school at least half-time. For unsubsidized loans, the student is responsible for all interest.

What is the key difference between subsidized and unsubsidized federal loans?

A. Only unsubsidized loans must be repaid

B. Who pays the interest during school

C. Subsidized loans come from private banks

D. Unsubsidized loans have no interest at all

MAIN — Compare federal and private student loans and calculate interest that accrues during school

Question 4 of 5 · Learn and Apply

LEARN

Federal loans have fixed rates set each year and protections such as income-driven repayment and deferment. Private loans depend on credit, often need a cosigner, may have variable rates, and have fewer protections.

Which is usually true of private student loans compared with federal ones?

A. They always have a lower fixed rate than federal loans

B. They include income-driven repayment by law

C. They need no credit check at all

D. They may need a cosigner

MAIN — Compare federal and private student loans and calculate interest that accrues during school

Question 5 of 5 · Knowledge Check · Practical how-to

In what order do experts usually suggest paying for college?

A. Private loans first, since they are easiest

B. Credit cards first, then grants

C. Gift aid and savings, then federal loans, then private

D. Federal loans before applying for grants

C. $360

D. $3,360

BACKWARD B1 · concept review — Simple interest over time

Question 5 of 5 · Knowledge Check

Which loan costs more by graduation, if both are $5,000 at the same rate?

A. The subsidized loan

B. The unsubsidized loan

C. They cost exactly the same

D. Neither charges interest ever

GO DEEPER 1 — Borrowing wisely

Question 1 of 5 · Learn and Apply

LEARN

Paying interest while in school keeps the balance from growing.

Paying the $27.50 monthly interest on a $5,500, 6% loan during school prevents capitalization. How much is paid over 48 months?

A. $27.50

B. $330

C. $1,320

D. $5,500

GO DEEPER 1 — Borrowing wisely

Question 2 of 5 · Knowledge Check

A private loan has a variable rate starting at 5%. What could happen?

A. The rate can only go down

B. The rate is fixed by federal law

C. Payments stay the same no matter what

D. The rate and payment could rise

GO DEEPER 1 — Borrowing wisely

Question 3 of 5 · Learn and Apply

LEARN

Origination fees are taken out before the money is sent, so the student receives less than the amount borrowed.

A federal loan has a 1% origination fee. On a $5,500 loan, how much is the fee?

A. $5.50

B. $55

C. $550

D. $5,445

GO DEEPER 1 — Borrowing wisely

Question 4 of 5 · Knowledge Check

A parent cosigns Kira's private loan. Who is responsible if Kira cannot pay?

A. No one; private loans are forgiven

B. The college that received the money

C. The parent

D. The federal government

GO DEEPER 1 — Borrowing wisely

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Aid paperwork: the FAFSA applies for aid; the award letter lists what a college offers; the Master Promissory Note (MPN) is the legal promise to repay a federal loan, with its terms and rights. Entrance counseling explains the loan.

Which should Kira read before signing a federal loan?

A. The Master Promissory Note

B. Her financial aid award letter only

C. Her FAFSA confirmation page

D. The college's net price calculator

SET 94 · Paying for College and Training

Repaying loans and return on investment

MAIN skill: Estimate student loan payments and judge borrowing against expected earnings

Outcome FL.COLLEGE.94 · National topic: Managing Credit · NJSLS 9.1.12: CDM, PB

Learning target: Estimate student loan repayment and evaluate the return on investment of education

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Payments, totals, and time (5 questions)
  - Why: Comparing repayment plans uses payment × months.

LEARN

Federal loans offer options such as deferment, forbearance, and income-driven repayment. Repayment rules changed in 2025-2026, so check StudentAid.gov for current plans. Default can lead to collections and wage garnishment.

Kira lost her job and cannot make her federal loan payment. What should she do first?

A. Stop paying and ignore the letters

B. Take a payday loan to pay it

C. Use a credit card to make the payments

D. Contact her servicer about options

BACKWARD B1 · concept review — Payments, totals, and time

Question 1 of 5 · Knowledge Check

120 months is how many years?

A. 1.2

B. 10

C. 12

D. 100

BACKWARD B1 · concept review — Payments, totals, and time

Question 2 of 5 · Knowledge Check

$200 a month for 120 months is...

A. $320

B. $2,400

C. $24,000

D. $240,000

BACKWARD B1 · concept review — Payments, totals, and time

Question 3 of 5 · Knowledge Check

Paid $24,000 on a $20,000 loan. Interest was...

A. $2,000

B. $4,000

C. $24,000

D. $44,000

BACKWARD B1 · concept review — Payments, totals, and time

Question 4 of 5 · Knowledge Check

A longer repayment term usually means...

A. Higher payments and less interest

B. The same total interest

C. Lower payments but more total interest

D. No interest is charged after year 5 of repayment

BACKWARD B1 · concept review — Payments, totals, and time

Question 5 of 5 · Knowledge Check

What is default on a federal student loan?

A. Choosing the standard plan

B. Failing to repay as agreed for a long period

C. Paying early

D. Being in school

GO DEEPER 1 — Return on education

Question 1 of 5 · Learn and Apply

LEARN

Payback time = cost ÷ yearly pay increase. It is a simple way to compare programs.

A certificate costs $12,000 and raises expected pay by $8,000 a year. How many years to earn back the cost?

A. 1.5 years

B. 0.67 years

C. 4 years

D. 20 years

GO DEEPER 1 — Return on education

Question 2 of 5 · Knowledge Check

Program A: $40,000 total cost, typical starting pay $55,000. Program B: $100,000 cost, starting pay $50,000. Which has the better debt-to-salary picture?

A. Program A

B. Program B, since it costs more

C. They are the same

D. Program B, because its tuition is higher

GO DEEPER 1 — Return on education

Question 3 of 5 · Knowledge Check · Practical how-to

Where can students compare typical earnings and debt for a college's programs?

A. A social media influencer's post

B. A student loan lender's ad

C. The U.S. Department of Education's College Scorecard

D. A college's own brochure

GO DEEPER 1 — Return on education

Question 4 of 5 · Learn and Apply

LEARN

Apprenticeships and trade programs can lead to good jobs with little or no debt.

An apprenticeship pays $18 an hour while training, 2,000 hours a year. What does it earn in a year?

A. $2,018

B. $3,600

C. $36,000

D. $360,000

GO DEEPER 1 — Return on education

Question 5 of 5 · Knowledge Check

Kira compares a $20,000 loan at 10% ($264.30 a month) with one at 6% ($222.04) over 10 years. How much less total interest is paid at 6%?

A. $42.26

B. $5,071.20

C. $6,644.80

D. $11,716.00

SET 95 · Entrepreneurship and Self-Employment

Revenue, costs, profit, and break-even

MAIN skill: Calculate profit and the break-even point for a small business

Outcome FL.BIZ.95 · National topic: Earning Income · NJSLS 9.1.12: PB, EG

Learning target: Calculate profit and break-even for a small business and explain the role of fixed and variable costs

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

B1 · Concept review: Revenue and costs (5 questions)

Why: Profit and break-even rest on separating revenue from costs.

B2 · Math link → G8-S22-M (Grade 8 8.EE.C.8.c): Write and solve systems of linear equations for real-world problems

Why: Break-even is where the revenue line meets the cost line.

B3 · Math link → ALG1-S20-M (Algebra 1 HSA-CED.A.1): Create linear equations and inequalities in one variable and use them to solve problems

Why: Profit goals lead to equations such as $12x - 600 = 360$.

After 5 of 5 correct, Go Deeper unlocks (a chain):

Go Deeper 1: Using break-even to plan (5 questions)

Go Deeper 2: Cash flow and records (5 questions)

Practical skills beyond the standards: Finding a break-even point; Separating business and personal money

Content status: stable

MAIN — Calculate profit and the break-even point for a small business

Question 1 of 5 · Learn and Apply

LEARN

Revenue = price × number sold. Costs include fixed costs (the same no matter how many you sell, such as equipment) and variable costs (per item). Profit = revenue − total costs.

Dev sells custom T-shirts for $20 each. In May he sells 80 shirts. His costs are $600 for a heat press (fixed) and $8 per shirt for blanks and ink. What is his profit?

A. $360

B. $960

C. $1,000

D. $1,600

MAIN — Calculate profit and the break-even point for a small business

Question 2 of 5 · Learn and Apply

LEARN

Each shirt adds price − variable cost toward fixed costs (the contribution per unit). Break-even units = fixed costs ÷ (price − variable cost).

Dev's fixed cost is $600; each shirt sells for $20 and costs $8 to make. How many shirts must he sell to break even?

A. 30

B. 50

C. 75

D. 600

MAIN — Calculate profit and the break-even point for a small business

Question 3 of 5 · Learn and Apply

LEARN

Variable costs rise with each item made; fixed costs stay the same as sales change.

Which is a variable cost for Dev's T-shirt business?

A. The heat press he bought once

B. Blank shirts

C. A yearly business registration fee

D. Monthly website hosting

MAIN — Calculate profit and the break-even point for a small business

Question 4 of 5 · Learn and Apply

LEARN

Profit margin = profit ÷ revenue × 100. It shows how much of each sales dollar is kept.

Dev's revenue is $2,000 and his profit is $500. What is his profit margin?

A. 4%

B. 25%

C. 40%

D. 75%

MAIN — Calculate profit and the break-even point for a small business

Question 5 of 5 · Knowledge Check

Before quitting a job to run a business full time, what should Dev check first?

A. Whether he has sold out of shirts once
B. Whether revenue is higher than last month
C. Whether he can buy more equipment on credit
D. Whether profits cover his living costs

BACKWARD B1 · concept review — Revenue and costs

Question 1 of 5 · Knowledge Check

Revenue means...

A. Money left after paying costs

B. Money received from sales

C. Money borrowed to start

D. Money paid to suppliers

BACKWARD B1 · concept review — Revenue and costs

Question 2 of 5 · Knowledge Check

30 items sold at $15 each bring in…

A. $2

B. $45

C. $450

D. $4,500

BACKWARD B1 · concept review — Revenue and costs

Question 3 of 5 · Knowledge Check

Revenue $450, costs $300. Profit is...

A. -$150

B. $150

C. $300

D. $750

BACKWARD B1 · concept review — Revenue and costs

Question 4 of 5 · Knowledge Check

What is a loss?

A. Costs greater than revenue

B. Revenue greater than costs

C. Selling more items

D. A fixed cost

BACKWARD B1 · concept review — Revenue and costs

Question 5 of 5 · Knowledge Check

Which cost stays the same whether Dev sells 10 or 100 shirts?

A. Ink used per shirt

B. Shipping costs for each order

C. Blank shirts

D. His monthly booth rent

GO DEEPER 1 — Using break-even to plan

Question 1 of 5 · Learn and Apply

LEARN

Units for a profit goal = (fixed costs + profit goal) ÷ contribution per unit.

Dev wants $480 profit a month. Fixed costs are $600 and each shirt adds $12 of contribution. How many shirts must he sell?

A. 24

B. 40

C. 50

D. 90

GO DEEPER 1 — Using break-even to plan

Question 2 of 5 · Learn and Apply

LEARN

A higher price raises the contribution per unit, so fewer sales are needed, if customers still buy.

If Dev raises the price to $24 (cost still $8; fixed $600), what is the new break-even point?

A. 50 shirts

B. 25 shirts

C. 37.5, so 38 shirts

D. 75 shirts, using $8

GO DEEPER 1 — Using break-even to plan

Question 3 of 5 · Knowledge Check

Cost: C = 600 + 8x. Revenue: R = 20x. Where do the two lines cross?

A. At x = 50

B. At x = 30

C. At x = 75

D. At x = 600

GO DEEPER 1 — Using break-even to plan

Question 4 of 5 · Knowledge Check

Above the break-even point, each extra shirt adds how much profit?

A. $8

B. $12

C. $20

D. $28

GO DEEPER 1 — Using break-even to plan

Question 5 of 5 · Knowledge Check

A supplier raises blanks from $8 to $10. With a $20 price and $600 fixed costs, what is the new break-even?

A. 50 shirts

B. 30 shirts

C. 20 shirts

D. 60 shirts

GO DEEPER 2 — Cash flow and records

Question 1 of 5 · Learn and Apply

LEARN

Cash flow = money in − money out in a period. A profitable business can still run short of cash when it pays before it gets paid.

Dev sells $900 in June but pays $1,100 for supplies for a big July order. What is June's net cash flow?

A. -$200

B. $200

C. $900

D. $2,000

GO DEEPER 2 — Cash flow and records

Question 2 of 5 · Knowledge Check · Practical how-to

Why should Dev keep business money in a separate account?

A. Banks forbid personal accounts for business

B. It makes records and taxes clearer

C. It doubles interest

D. It removes the need for taxes

GO DEEPER 2 — Cash flow and records

Question 3 of 5 · Knowledge Check

A customer owes Dev $250 and pays 30 days later. What is this unpaid amount called?

A. Accounts payable due
B. Fixed cost
C. Accounts receivable
D. Gross profit

GO DEEPER 2 — Cash flow and records

Question 4 of 5 · Knowledge Check

Dev keeps $500 in a business reserve. Costs are $300 a month with no sales. How many months could he cover?

A. About 3 months

B. About 1.7 months

C. About 0.6 months

D. About 800 months

GO DEEPER 2 — Cash flow and records

Question 5 of 5 · Knowledge Check · Practical how-to

Which record best supports a business expense at tax time?

A. A memory of the purchase

B. A note in his phone with the total

C. A receipt showing what was bought and when

D. A bank account balance alone

SET 96 · Entrepreneurship and Self-Employment

Self-employment taxes

MAIN skill: Estimate self-employment and income taxes for a small business and plan quarterly payments

Outcome FL.BIZ.96 · National topic: Earning Income · NJSLS 9.1.12: PB, CFR

Learning target: Estimate taxes on self-employment income and plan estimated payments

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

B1 · Concept review: Business deductions and tax forms (5 questions)

Why: Self-employment tax is charged on profit after deductible expenses.

B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100

Why: Self-employment tax is a percent of a percent of profit.

After 5 of 5 correct, Go Deeper unlocks (a chain):

Go Deeper 1: Keeping more of what you earn (5 questions)

Practical skills beyond the standards: Setting aside money for taxes; Keeping a mileage log

Content status: time-sensitive

Source: IRS (Self-employment tax) — Self-employment tax is 15.3% (12.4% Social Security and 2.9% Medicare) and is figured on 92.35% of net earnings from self-employment; it applies when net earnings are $400 or more. https://www.irs.gov/businesses/small-businesses-self-employed/self-employment-tax-social-security-and-medicare-taxes

Source: IRS (Estimated taxes) — People who expect to owe $1,000 or more when they file, such as many self-employed workers, generally must pay estimated tax quarterly. https://www.irs.gov/businesses/small-businesses-self-employed/estimated-taxes

MAIN — Estimate self-employment and income taxes for a small business and plan quarterly payments

Question 1 of 5 · Learn and Apply

LEARN

Self-employed people report business income and expenses (on Schedule C). Net profit = income − deductible business expenses. Taxes are figured on net profit.

Dev's T-shirt business earns $28,000 in sales with $8,000 of business expenses. What is his net profit for taxes?

A. $8,000

B. $20,000

C. $28,000

D. $36,000

MAIN — Estimate self-employment and income taxes for a small business and plan quarterly payments

Question 2 of 5 · Learn and Apply

LEARN

Employees pay 7.65% for Social Security and Medicare, and employers pay another 7.65%. Self-employed people pay both halves: 15.3%, figured on 92.35% of net earnings.

Self-employment tax is 15.3% of 92.35% of net profit. On $20,000 of net profit, what is it?

A. $1,530.00

B. $2,825.91

C. $3,060.00

D. $18,470.00

MAIN — Estimate self-employment and income taxes for a small business and plan quarterly payments

Question 3 of 5 · Learn and Apply

LEARN

If you expect to owe $1,000 or more when you file, the IRS generally requires quarterly estimated payments. Missing them can cause penalties.

Why do many self-employed people pay estimated taxes four times a year?

A. The IRS charges a fee for filing once a year

B. They pay no tax at the end of the year

C. Estimated taxes are optional gifts

D. No employer withholds tax from their pay

MAIN — Estimate self-employment and income taxes for a small business and plan quarterly payments

Question 4 of 5 · Knowledge Check

Dev expects to owe $4,800 in total tax for the year. How much is each of four equal quarterly payments?

A. $400

B. $1,200

C. $4,800

D. $19,200

MAIN — Estimate self-employment and income taxes for a small business and plan quarterly payments

Question 5 of 5 · Knowledge Check · Practical how-to

A rule of thumb: set aside 25% to 30% of net profit for taxes. On $2,000 of monthly profit, what is the range?

A. $500 to $600

B. $50 to $60

C. $250 to $300

D. $1,400 to $1,500

BACKWARD B1 · concept review — Business deductions and tax forms

Question 1 of 5 · Learn and Apply

LEARN

Ordinary and necessary costs of running a business can be deducted. Personal costs cannot.

Which is usually a deductible business expense for Dev?

A. His personal video game purchases

B. Lunch with his family on vacation

C. Clothes he wears to school

D. Ink used to print shirts he sells

BACKWARD B1 · concept review — Business deductions and tax forms

Question 2 of 5 · Learn and Apply

MAIN — Recognize signs of identity theft and follow the steps to recover

Question 1 of 5 · Learn and Apply

LEARN

Identity theft is when someone uses your personal information, such as your name and Social Security number, to open accounts, file taxes, or get services. Signs include unfamiliar bills, accounts on your credit report, or calls from debt collectors about debts you do not owe.

Rosa gets a bill for a credit card she never opened. What is the most likely explanation?

A. The bank sends random cards to everyone as a gift

B. Her credit score rose and a card opened by itself

C. It is a normal reminder to apply for a card

D. Someone used her identity

MAIN — Recognize signs of identity theft and follow the steps to recover

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

The Federal Trade Commission runs IdentityTheft.gov, which builds a recovery plan and an Identity Theft Report you can use with businesses and credit bureaus.

Which website gives a free, step-by-step recovery plan after identity theft?

A. A company that charges to "erase" the theft

B. The credit bureau's paid monitoring service

C. The bank where the fraud happened only

D. IdentityTheft.gov

MAIN — Recognize signs of identity theft and follow the steps to recover

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

A credit freeze blocks new credit in your name until you lift it. It is free at Equifax, Experian, and TransUnion. Also contact the business where the fraud happened and review your credit reports.

After discovering the fake account, which step should Rosa take early?

A. Freeze her credit at all three bureaus

B. Post her Social Security number to warn friends

C. Wait a year to see if it happens again

D. Close her own savings account and keep cash at home

MAIN — Recognize signs of identity theft and follow the steps to recover

Question 4 of 5 · Knowledge Check

Which habit best protects Rosa's Social Security number?

A. Keeping her Social Security card in her wallet every day

B. Sharing it only when truly required

C. Writing it on forms that only ask for "ID"

D. Giving it to anyone who calls and says they are from a bank

MAIN — Recognize signs of identity theft and follow the steps to recover

Question 5 of 5 · Knowledge Check · Practical how-to

A company says Rosa's data was exposed in a data breach. Which response helps most?

A. Ignore it because breaches never affect individuals

B. Reply to the email with her full account numbers

C. Change passwords and watch her accounts

D. Stop using every bank forever

BACKWARD B1 · concept review — Personal information and why thieves want it

Question 1 of 5 · Knowledge Check

Which information is most valuable to an identity thief?

A. Her ZIP code alone

B. A Social Security number

C. Her first name alone

D. Her library card number

BACKWARD B1 · concept review — Personal information and why thieves want it
Question 2 of 5 · Knowledge Check

Where should a Social Security card usually be kept?

A. Somewhere safe at home
B. In a phone case
C. Taped inside a car
D. In a backpack every day

BACKWARD B1 · concept review — Personal information and why thieves want it
Question 3 of 5 · Knowledge Check

Which document should be shredded before throwing it out?

A. A takeout menu
B. A plain envelope with no address
C. An old bank statement
D. A store coupon

BACKWARD B1 · concept review — Personal information and why thieves want it
Question 4 of 5 · Knowledge Check

How many major consumer credit bureaus are there?

A. 1
B. 3
C. 5
D. 50

BACKWARD B1 · concept review — Personal information and why thieves want it
Question 5 of 5 · Knowledge Check

How can Rosa spot an account she did not open?

A. Check her bank balance only
B. Wait for a debt collector to call
C. Ask the thief to tell her
D. Review her free credit reports

GO DEEPER 1 — Special cases of identity theft

Question 1 of 5 · Learn and Apply

LEARN

In tax identity theft, a thief files a return to steal a refund. The IRS offers an Identity Protection PIN to prevent it.

The IRS rejects Rosa's tax return because one was already filed with her SSN. What happened?

A. She filed twice by accident, which is normal

B. Her employer filed her return for her

C. Tax identity theft

D. The IRS lost her return

GO DEEPER 1 — Special cases of identity theft

Question 2 of 5 · Learn and Apply

LEARN

Parents can request a credit freeze for children under 16.

Why do thieves target children's identities?

A. Theft can go unnoticed for years

B. Children have high credit limits

C. Children's SSNs expire at 18

D. Banks require children to have cards

GO DEEPER 1 — Special cases of identity theft

Question 3 of 5 · Knowledge Check

Someone used Rosa's information to see a doctor. Which records might be wrong?

A. Her credit card statements only

B. Her medical records

C. Her school records

D. Her car registration

GO DEEPER 1 — Special cases of identity theft

Question 4 of 5 · Learn and Apply

LEARN

Federal law caps liability for unauthorized credit card charges at $50, and many issuers offer $0 liability.

A thief made $2,400 of fraudulent charges on Rosa's credit card. Under federal law, what is the most she can be held liable for?

A. $50

B. $500

C. $1,200

D. $2,400

GO DEEPER 1 — Special cases of identity theft

Question 5 of 5 · Knowledge Check · Practical how-to

Rosa needs to apply for a car loan but has a freeze. What should she do?

A. Remove the freeze permanently forever

B. Apply under a friend's name

C. Give up on the loan

D. Temporarily lift the freeze

SET 99 · Consumer Protection, Fraud, and Digital Security

Recognizing and avoiding scams

MAIN skill: Identify common scams and their warning signs, and respond safely

Outcome FL.PROTECT.99 · National topic: Managing Risk · NJSLS 9.1.12: RM, FP

Learning target: Identify common types of fraud and scams and the actions to take if victimized

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Payment methods and how hard they are to undo (5 questions)
  - Why: Scammers choose payments that are hard to reverse.
- B2 · Math link → G7-S25-M (Grade 7 7.NS.A.3): Solve real-world problems with the four operations on rational numbers
  - Why: Scam losses add up the money sent and the goods lost.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Scams targeting young people (5 questions)

Practical skills beyond the standards: Reporting fraud to the FTC; Spotting fake check scams

Content status: time-sensitive

Source: FTC (Scams) — Scammers pretend to be from trusted organizations, create urgency, and ask for payment by gift card, wire, cryptocurrency, or payment app. https://consumer.ftc.gov/features/scam-alerts

Source: FTC (Fake check scams) — Banks must make deposited funds available quickly, but a fake check can bounce days later and the depositor must repay the bank.
https://consumer.ftc.gov/articles/how-spot-avoid-and-report-fake-check-scams

Source: New Jersey Division of Consumer Affairs — New Jersey residents can file consumer complaints with the Division of Consumer Affairs, which enforces the New Jersey Consumer Fraud Act. https://www.njconsumeraffairs.gov/

MAIN — Identify common scams and their warning signs, and respond safely

Question 1 of 5 · Learn and Apply

LEARN

Scam warning signs: a caller pretends to be from a trusted group, there is a problem or a prize, pressure to act now, and a demand to pay in a specific way (gift cards, wire transfer, cryptocurrency, or payment app). Government agencies do not demand gift cards.

A caller says he is from the "Social Security office," your number is suspended, and you must pay today with gift cards. Which warning sign appears?

A. The caller uses a polite tone of voice

B. Demanding payment by gift card

C. The call comes during business hours

D. The caller knows that you have a phone

MAIN — Identify common scams and their warning signs, and respond safely

Question 2 of 5 · Learn and Apply

LEARN

In a fake check scam, the scammer overpays with a fake check and asks for the difference back. Banks make deposits available quickly, but the check can bounce days later and the depositor must repay the bank.

Rosa sells a bike online for $300. The buyer mails a check for $1,500 and asks her to send back $1,200 by payment app. The check bounces a week later. How much does Rosa lose?

A. Nothing, since the bank cleared the check

B. Only the $300 bike price

C. $1,200 plus the bike

D. $1,500 but she keeps the bike

MAIN — Identify common scams and their warning signs, and respond safely

Question 3 of 5 · Knowledge Check

A job posting pays $40 an hour to "reship packages" after you pay $99 for a starter kit. What is the best response?

A. Pay the fee because good jobs require investment

B. Give your bank login so they can send pay

C. Reship the packages to earn trust first

D. Avoid it; it shows scam signs

MAIN — Identify common scams and their warning signs, and respond safely

Question 4 of 5 · Knowledge Check · Practical how-to

A pop-up says Rosa's computer has a virus and to call a number for "tech support." What should she do?

A. Close the page and not call

B. Call and give the support agent remote access

C. Pay with a gift card for a quick fix

D. Share her passwords so they can test them

MAIN — Identify common scams and their warning signs, and respond safely

Question 5 of 5 · Learn and Apply · Practical how-to

LEARN

Report fraud to the FTC at ReportFraud.ftc.gov, to your bank or payment app right away, and to state agencies such as the New Jersey Division of Consumer Affairs.

Rosa was scammed. Where should she report it?

A. Only to the scammer, to ask for a refund

B. ReportFraud.ftc.gov

C. Nowhere, since reporting does nothing

D. A website that promises to recover money for a fee

BACKWARD B1 · concept review — Payment methods and how hard they are to undo
Question 1 of 5 · Knowledge Check

Which payment is hardest to get back after a scam?

A. A credit card purchase you dispute
B. A check you stop in time
C. Gift card codes
D. A debit card charge reported quickly

BACKWARD B1 · concept review — Payment methods and how hard they are to undo
Question 2 of 5 · Knowledge Check

Which payment gives the strongest legal protection for online shopping?

A. A credit card
B. A wire transfer
C. Cryptocurrency
D. A gift card

BACKWARD B1 · concept review — Payment methods and how hard they are to undo

Question 3 of 5 · Knowledge Check

"Act now or lose this offer!" is an example of…

A. Good, helpful customer service

B. A legal requirement for limited offers

C. A normal sale with a deadline

D. Pressure to act quickly

BACKWARD B1 · concept review — Payment methods and how hard they are to undo

Question 4 of 5 · Knowledge Check

A check for $1,500 pays a $300 item. How much is the overpayment?

A. $300

B. $1,200

C. $1,500

D. $1,800

BACKWARD B1 · concept review — Payment methods and how hard they are to undo
Question 5 of 5 · Knowledge Check

If a message says you won a prize but must pay a fee to claim it, it is probably…

A. A normal contest rule
B. A sweepstakes tax the winner must prepay
C. A scam
D. A real prize with a shipping fee

GO DEEPER 1 — Scams targeting young people

Question 1 of 5 · Learn and Apply

LEARN

Money mules move stolen money for criminals, often recruited online. It can lead to frozen accounts and criminal charges.

An online friend Rosa has never met asks her to receive money and forward it. What is she being asked to do?

A. Act as a money mule

B. Join a legitimate savings club

C. Open a normal business account

D. Help a charity process donations

GO DEEPER 1 — Scams targeting young people

Question 2 of 5 · Knowledge Check

A website sells sneakers worth $200 for $40 and accepts only payment apps. What is the best move?

A. Buy several pairs to resell

B. Pay with a gift card for a discount

C. Send money first and check reviews later

D. Buy elsewhere

GO DEEPER 1 — Scams targeting young people

Question 3 of 5 · Knowledge Check · Practical how-to

A "friend" messages from a new account asking to borrow $100 urgently. What should Rosa do?

A. Send the money right away

B. Contact the friend another way to check

C. Send half to be safe

D. Ask for the friend's password to verify

GO DEEPER 1 — Scams targeting young people

Question 4 of 5 · Knowledge Check · Practical how-to

Rosa paid a scammer $200 with a debit card and reports it the same day. What should she ask the bank to do?

A. Wait a month to see if it resolves

B. Ask the scammer for a refund first

C. Send more money to test it

D. Dispute the charge and block the card

GO DEEPER 1 — Scams targeting young people

Question 5 of 5 · Knowledge Check

A "recovery service" offers to get Rosa's lost money back for an upfront fee. What is it likely to be?

A. A government program

B. Another scam

C. A required step before reporting

D. A bank's official fraud refund program

SET 100 · Consumer Protection, Fraud, and Digital Security

Consumer rights and where to get help

MAIN skill: Use federal and state consumer protections and file a complaint

Outcome FL.PROTECT.100 · National topic: Managing Risk · NJSLS 9.1.12: RM, CFR

Learning target: Describe consumer protection laws and how to file complaints

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

B1 · Concept review: What consumer protection laws do (5 questions)

Why: Each law protects a different kind of transaction.

B2 · Math link → G7-S25-M (Grade 7 7.NS.A.3): Solve real-world problems with the four operations on rational numbers

Why: Liability questions compare a loss with a legal limit.

Source: New Jersey Division of Consumer Affairs — New Jersey residents can file consumer complaints with the Division of Consumer Affairs, which enforces the New Jersey Consumer Fraud Act. https://www.njconsumeraffairs.gov/

MAIN — Use federal and state consumer protections and file a complaint

Question 1 of 5 · Learn and Apply

LEARN

Federal rules (Regulation E) limit debit card losses: $50 if you report within 2 business days of learning of the loss; up to $500 if later; and possibly unlimited if not reported within 60 days after the statement. Many banks offer more protection.

Rosa's debit card is stolen. She reports it within 2 business days of noticing. Thieves spent $700. What is her most liability under federal rules?

A. $50

B. $700

C. $500

D. $0 in every case

MAIN — Use federal and state consumer protections and file a complaint

Question 2 of 5 · Knowledge Check

Rosa's stolen debit card is used for $700, and she waits 10 days to report it (still within 60 days of the statement). What is the most she could owe?

A. $50

B. $200

C. $500

D. $700

MAIN — Use federal and state consumer protections and file a complaint

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

The CFPB accepts complaints about banks, credit cards, loans, and credit reports and sends them to companies for a response. New Jersey residents can also contact the Division of Consumer Affairs.

Rosa's company will not fix a problem with her bank account. Where can she file a complaint?

A. The company's competitor

B. A social media influencer

C. The Consumer Financial Protection Bureau

D. The U.S. Postal Service

MAIN — Use federal and state consumer protections and file a complaint

Question 4 of 5 · Learn and Apply

LEARN

The Fair Debt Collection Practices Act bars collectors from harassment, threats, and calls before 8 a.m. or after 9 p.m. It also gives you the right to dispute a debt and get validation.

A debt collector calls Rosa at 2 a.m. and threatens jail. What is true?

A. This breaks federal debt collection rules

B. Collectors may call anytime

C. Unpaid debts send people to jail

D. She must pay immediately to stop the calls

MAIN — Use federal and state consumer protections and file a complaint

Question 5 of 5 · Learn and Apply

LEARN

The FTC Cooling-Off Rule gives buyers 3 days to cancel many sales of $25 or more made at their home or at temporary locations, such as hotel ballrooms.

A salesperson sells Rosa a $400 vacuum at her home. Under the FTC Cooling-Off Rule, how many days does she have to cancel?

A. 0

B. 1

C. 3

D. 30

BACKWARD B1 · concept review — What consumer protection laws do

Question 5 of 5 · Knowledge Check · Practical how-to

An app asks for permission to read all texts and contacts but is only a flashlight. What should Rosa do?

A. Allow everything

B. Share her bank login with it

C. Ignore the request and keep using it

D. Deny or delete it

SET 102 · Inflation, Interest Rates, and the Economy

Inflation and the Consumer Price Index

MAIN skill: Calculate inflation from prices and the CPI and explain its effect on purchasing power

Outcome FL.ECON.102 · National topic: Saving · NJSLS 9.1.12: EG

Learning target: Calculate inflation using price indexes and explain how inflation affects purchasing power

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

B1 · Concept review: Percent change (5 questions)

Why: Inflation rates are percent changes from an old value.

B2 · Math link → G7-S08-M (Grade 7 7.RP.A.3): Find a percent increase or a percent decrease

Why: Inflation is a percent increase in prices.

After 5 of 5 correct, Go Deeper unlocks (a chain):

Go Deeper 1: Inflation over many years (5 questions)

Practical skills beyond the standards: Reading the CPI

Content status: stable

Source: U.S. Bureau of Labor Statistics (Consumer Price Index) — The CPI measures the average change over time in prices paid by urban consumers for a market basket of goods and services. https://www.bls.gov/cpi/

Source: TreasuryDirect (I bonds) — Series I savings bonds pay a rate that combines a fixed rate and an inflation rate that is reset every six months. https://www.treasurydirect.gov/savings-bonds/i-bonds/

MAIN — Calculate inflation from prices and the CPI and explain its effect on purchasing power

Question 1 of 5 · Learn and Apply

LEARN

Inflation is a general rise in prices over time. Inflation rate = (new price − old price) ÷ old price × 100.

A basket of groceries cost $80 last year and costs $84 this year. What is the inflation rate for this basket?

A. 4%

B. 4.8%

C. 5%

D. 105%

MAIN — Calculate inflation from prices and the CPI and explain its effect on purchasing power

Question 2 of 5 · Learn and Apply

LEARN

The Consumer Price Index (CPI), published by the Bureau of Labor Statistics, tracks prices of a typical basket of goods and services. Percent change in the CPI measures inflation.

The CPI was 300 last year and is 309 this year. What was the inflation rate?

A. 2.9%

B. 3%

C. 9%

D. 103%

MAIN — Calculate inflation from prices and the CPI and explain its effect on purchasing power

Question 3 of 5 · Knowledge Check

Prices rise 4% this year. A $50 pair of jeans will cost about how much next year?

A. $48

B. $50.04

C. $52

D. $54

MAIN — Calculate inflation from prices and the CPI and explain its effect on purchasing power

Question 4 of 5 · Learn and Apply

LEARN

Purchasing power is how much money can buy. When prices rise, each dollar buys less.

What happens to the purchasing power of $100 kept in a jar during inflation?

A. It buys more because prices are rising

B. It stays the same because the bill still says $100

C. It buys less over time

D. It earns interest from the government

MAIN — Calculate inflation from prices and the CPI and explain its effect on purchasing power

Question 5 of 5 · Knowledge Check

Which group is usually hurt most by unexpected inflation?

A. People whose pay rises faster than prices

B. People on fixed incomes

C. Borrowers with fixed-rate loans

D. Owners of assets that rise with prices

BACKWARD B1 · concept review — Percent change

Question 1 of 5 · Learn and Apply

LEARN

Percent change = change ÷ original × 100.

A. 4

B. 18

C. 68

D. 288

GO DEEPER 1 — Inflation over many years

Question 3 of 5 · Knowledge Check

A movie ticket cost $5 when the CPI was 150 and costs $15 when the CPI is 300. Did ticket prices rise faster than overall prices?

A. No; ticket prices rose exactly with overall prices

B. No; tickets rose less than prices

C. Yes; tickets rose by $150

D. Yes; tickets tripled while prices doubled

GO DEEPER 1 — Inflation over many years

Question 4 of 5 · Learn and Apply

LEARN

Today's dollars = old amount × (CPI now ÷ CPI then).

$50 in a year when the CPI was 200 is worth how much in today's dollars if the CPI is now 300?

A. $33.33

B. $75

C. $100

D. $150

GO DEEPER 1 — Inflation over many years

Question 5 of 5 · Learn and Apply

LEARN

I bonds from TreasuryDirect pay a rate that includes an inflation part reset every six months.

Which savings product has a rate partly tied to inflation?

A. A gift card

B. A checking account with no interest

C. Series I savings bonds

D. A store loyalty point

SET 103 · Inflation, Interest Rates, and the Economy

Real returns and interest rates

MAIN skill: Find real rates of return and explain how the Federal Reserve affects interest rates

Outcome FL.ECON.103 · National topic: Saving · NJSLS 9.1.12: EG

Learning target: Distinguish nominal and real rates and explain how the Federal Reserve influences interest rates

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Nominal and real (5 questions)
  - Why: Real returns separate growth in dollars from growth in buying power.
- B2 · Math link → G7-S25-M (Grade 7 7.NS.A.3): Solve real-world problems with the four operations on rational numbers
  - Why: Real rates subtract one percent from another, including negatives.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Rates in everyday decisions (5 questions)

Practical skills beyond the standards: Comparing a raise with inflation

Content status: time-sensitive

Source: Federal Reserve (Monetary policy) — The Federal Reserve sets a target range for the federal funds rate to pursue maximum employment and stable prices; it has a longer-run inflation goal of 2%.
https://www.federalreserve.gov/monetarypolicy.htm

MAIN — Find real rates of return and explain how the Federal Reserve affects interest rates

Question 1 of 5 · Learn and Apply

LEARN

The nominal rate is the stated rate. The real rate shows growth in buying power: real rate ≈ nominal rate − inflation rate.

Rosa's savings earn 4.5% a year and inflation is 3%. About what is her real rate of return?

A. -1.5%

B. 1.5%

C. 4.5%

D. 7.5%

MAIN — Find real rates of return and explain how the Federal Reserve affects interest rates

Question 2 of 5 · Learn and Apply

LEARN

Real pay change ≈ raise − inflation. If prices rise faster than pay, the same paycheck buys less.

Rosa gets a 2% raise when inflation is 4%. What happens to her real pay?

A. It rises by about 6%

B. It rises by about 2%

C. It stays the same

D. It falls by about 2%

MAIN — Find real rates of return and explain how the Federal Reserve affects interest rates

Question 3 of 5 · Knowledge Check

A savings account pays 0.5% while inflation is 3%. What is happening to the money's buying power?

A. It is growing faster than prices

B. It is shrinking

C. It is growing at exactly 3%

D. It cannot change in a bank

MAIN — Find real rates of return and explain how the Federal Reserve affects interest rates

Question 4 of 5 · Learn and Apply

LEARN

The Federal Reserve sets a target for the federal funds rate, which banks charge each other overnight. Changes ripple to credit card, auto, and mortgage rates and to savings yields. Raising rates tends to slow borrowing and cool inflation.

When the Federal Reserve raises its target interest rate, what usually happens to loan rates?

A. They tend to rise

B. They tend to fall

C. They stay the same until each loan ends

D. They are unaffected; only savings rates change

MAIN — Find real rates of return and explain how the Federal Reserve affects interest rates

Question 5 of 5 · Knowledge Check

Why might the Fed raise rates when inflation is high?

A. To make loans cheaper for everyone

B. To print more money

C. To slow borrowing and spending

D. To lower taxes

BACKWARD B1 · concept review — Nominal and real

Question 1 of 5 · Knowledge Check

The "nominal" rate is...

A. The rate after inflation

B. The rate after taxes

C. The stated rate before inflation

D. The rate charged on a credit card only

BACKWARD B1 · concept review — Nominal and real

6% − 2% = ?

A. 3%

B. 4%

C. 8%

D. 12%

BACKWARD B1 · concept review — Nominal and real

Question 3 of 5 · Knowledge Check

Which agency sets the target for short-term U.S. interest rates?

A. The IRS

B. The FDIC

C. The SEC

D. The Federal Reserve

BACKWARD B1 · concept review — Nominal and real

Question 4 of 5 · Knowledge Check

If prices rise 5% and your money grows 5%, your buying power…

A. Stays about the same

B. Doubles

C. Falls by about 10 percent

D. Rises by 5%

BACKWARD B1 · concept review — Nominal and real

Question 5 of 5 · Knowledge Check

Higher interest rates make borrowing…

A. Cheaper for all

B. More expensive

C. Unaffected

D. Cheaper only for savers

GO DEEPER 1 — Rates in everyday decisions

Question 1 of 5 · Learn and Apply

LEARN

Many credit cards have rates tied to the prime rate, which moves with the Fed's target.

Rosa's variable-rate credit card is 20% APR. The prime rate rises 0.5 percentage point. If her card follows prime, what is the new APR?

A. 20.1%

B. 20.5%

C. 25%

D. 30%

GO DEEPER 1 — Rates in everyday decisions

Question 2 of 5 · Knowledge Check

Rates are high. Rosa wants to lock in a savings rate for 2 years. Which product does that?

A. A 2-year CD

B. A checking account

C. A variable-rate credit card

D. Cash at home

GO DEEPER 1 — Rates in everyday decisions

Question 3 of 5 · Knowledge Check

Real return using an exact method: (1 + 0.06) ÷ (1 + 0.02) − 1 is about…

A. 3.00%

B. 3.92%

C. 4.00%

D. 8.00%

GO DEEPER 1 — Rates in everyday decisions

Question 4 of 5 · Knowledge Check

Mortgage rates rise from 6% to 7%. What usually happens to how much house a buyer can afford?

A. It increases

B. It is unchanged

C. It decreases

D. It doubles

GO DEEPER 1 — Rates in everyday decisions

Question 5 of 5 · Knowledge Check

What is the Fed's stated longer-run inflation goal?

A. 0%

B. 2%

C. 5%

D. 10%

SET 104 · Inflation, Interest Rates, and the Economy

Economic conditions and personal finances

MAIN skill: Explain how unemployment, recessions, and market changes affect personal financial decisions

Outcome FL.ECON.104 · National topic: Earning Income · NJSLS 9.1.12: EG, CFR

Learning target: Explain how economic conditions such as unemployment and recessions affect income and financial decisions

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

B1 · Concept review: The business cycle (5 questions)
Why: Economic conditions follow cycles that affect jobs and prices.

B2 · Math link → G6-S11-M (Grade 6 6.RP.A.3.c): Find the whole, given a part and the percent
Why: Unemployment and other rates are percents of a whole.

After 5 of 5 correct, Go Deeper unlocks (a chain):

Go Deeper 1: Taxes, government, and the economy (5 questions)

Practical skills beyond the standards: Preparing for a downturn

Content status: stable

Source: U.S. Bureau of Labor Statistics (Unemployment) — The unemployment rate is the share of the labor force that is jobless and looking for work. https://www.bls.gov/cps/

Source: Federal Reserve (Monetary policy) — The Federal Reserve sets a target range for the federal funds rate to pursue maximum employment and stable prices; it has a longer-run inflation goal of 2%. https://www.federalreserve.gov/monetarypolicy.htm

MAIN — Explain how unemployment, recessions, and market changes affect personal financial decisions

Question 1 of 5 · Learn and Apply

LEARN

The labor force is people working or looking for work. Unemployment rate = unemployed ÷ labor force × 100.

A town has 50,000 people in the labor force; 2,000 are jobless and looking for work. What is the unemployment rate?

A. 2%

B. 4%

C. 25%

D. 40%

MAIN — Explain how unemployment, recessions, and market changes affect personal financial decisions

Question 2 of 5 · Learn and Apply

LEARN

In a recession, output and spending fall, layoffs rise, and many businesses earn less. Recessions are part of the business cycle of expansions and contractions.

What is a recession?

A. A single bad month on the stock market

B. A rise in stock prices

C. A rise in prices across the economy

D. A significant, widespread decline in economic activity

MAIN — Explain how unemployment, recessions, and market changes affect personal financial decisions

Question 3 of 5 · Knowledge Check · Practical how-to

A recession may be starting. Which step best protects Rosa's finances?

A. Take on new debt for a vacation

B. Build up her emergency fund

C. Sell all investments in a panic

D. Quit her job to wait it out

MAIN — Explain how unemployment, recessions, and market changes affect personal financial decisions

Question 4 of 5 · Learn and Apply

LEARN

Prices respond to supply and demand: less supply or more demand pushes prices up.

Gas prices jump because supply is cut while demand stays the same. What explains the higher price?

A. More supply with the same demand

B. Less supply with the same demand

C. Less demand with the same supply

D. Prices are set by law each day

MAIN — Explain how unemployment, recessions, and market changes affect personal financial decisions

Question 5 of 5 · Knowledge Check

During a downturn, Rosa's stock index fund drops 20%. She has 30 years until retirement. What does history suggest?

A. Staying invested has usually recovered over time

B. Stocks never recover after a drop

C. She should move everything to cash at once

D. She must sell her shares immediately by federal law

BACKWARD B1 · concept review — The business cycle

D. People without jobs who are looking for work

BACKWARD B1 · concept review — The business cycle

Question 4 of 5 · Knowledge Check

If demand for a concert rises and seats stay the same, prices tend to...

A. Fall

B. Rise

C. Stay fixed

D. Fall to attract more buyers

BACKWARD B1 · concept review — The business cycle

Question 5 of 5 · Knowledge Check

GDP measures...

A. The national debt only

B. Total household income only

C. The value of goods and services an economy produces

D. The stock market's value

GO DEEPER 1 — Taxes, government, and the economy

Question 1 of 5 · Learn and Apply

LEARN

Public goods, such as roads, parks, and national defense, are available to everyone and are paid for largely through taxes.

Taxes pay for public goods. Which is a public good?

A. A private gym membership

B. A restaurant meal

C. A streaming subscription

D. A public road

GO DEEPER 1 — Taxes, government, and the economy

Question 2 of 5 · Learn and Apply

LEARN

Unemployment insurance, run by states, replaces part of wages for eligible workers who lose jobs through no fault of their own. Benefit formulas and maximums differ by state and year.

Unemployment insurance pays 50% of Rosa's $800 weekly wage, up to a $600 weekly maximum. What does she receive?

A. $400

B. $600

C. $800

D. $1,400

GO DEEPER 1 — Taxes, government, and the economy

Question 3 of 5 · Knowledge Check

Why do some jobs feel recessions less?

A. Demand for them stays steady

B. They pay no taxes

C. They never hire anyone

D. They pay the highest wages

GO DEEPER 1 — Taxes, government, and the economy

Question 4 of 5 · Knowledge Check

A rise in the minimum wage raises a worker's pay from $15 to $15.92 an hour. What is the percent increase, to the nearest tenth?

A. 0.9%

B. 5.8%

C. 6.1%

D. 92%

GO DEEPER 1 — Taxes, government, and the economy

Question 5 of 5 · Knowledge Check

How do interest rates usually affect new businesses in a downturn when the Fed cuts rates?

A. Cheaper loans can make borrowing easier

B. Loans become illegal

C. Rates rise automatically

D. Banks stop lending forever

SET 105 · Contracts, Subscriptions, and Fees

Reading a contract before signing

MAIN skill: Identify the key terms of a contract and the questions to ask before signing

Outcome FL.CONTRACT.105 · National topic: Spending · NJSLS 9.1.12: CDM, FP

Learning target: Identify the rights and responsibilities in contracts and evaluate their costs before signing

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: What makes a contract (5 questions)
  - Why: Reading a contract is easier with its basic parts in mind.
- B2 · Math link → G7-S29-M (Grade 7 7.EE.B.3): Solve multistep problems with positive and negative rational numbers in any form
  - Why: Total contract cost adds monthly, one-time, and yearly charges.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Getting out of a contract (5 questions)

Practical skills beyond the standards: Reading cancellation terms; Canceling in writing

Content status: stable

Source: New Jersey Division of Consumer Affairs — New Jersey residents can file consumer complaints, including about contracts and refund policies, with the Division of Consumer Affairs. https://www.njconsumeraffairs.gov/

MAIN — Identify the key terms of a contract and the questions to ask before signing

Question 1 of 5 · Learn and Apply · Practical how-to

LEARN

A contract is a legally binding agreement. Key parts: the parties, what each promises, the price and fees, the length (term), how it renews, how to cancel, and how disputes are handled. Read every page before signing and keep a copy.

Jamal is about to sign a gym membership contract. Which part tells him how to end it?

A. The gym's logo and address at the top of the page

B. The list of classes offered this month

C. The photo on his membership card

D. The cancellation terms

MAIN — Identify the key terms of a contract and the questions to ask before signing

Question 2 of 5 · Learn and Apply

LEARN

The full cost of a contract includes monthly charges plus one-time and yearly fees.

The gym contract is $35 a month for 12 months, plus a $49 sign-up fee and a $60 annual fee. What is the first-year cost?

A. $420

B. $469

C. $480

D. $529

MAIN — Identify the key terms of a contract and the questions to ask before signing

Question 3 of 5 · Learn and Apply

LEARN

If a promise matters, get it in writing in the contract. Signed written terms usually control over spoken promises.

A salesperson says, "Don't worry about the fine print; you can cancel anytime." The written contract says cancellation costs $150. Which usually controls?

A. The salesperson's spoken promise, because it came first

B. The written contract

C. Whatever Jamal remembers later

D. Neither, since gym contracts are not binding

MAIN — Identify the key terms of a contract and the questions to ask before signing

Question 4 of 5 · Learn and Apply

LEARN

An arbitration clause sends disputes to a private arbitrator, often limiting class actions and appeals.

The contract says disputes go to "binding arbitration." What does that usually mean?

A. Jamal can sue in any court he chooses

B. The gym must refund him automatically

C. A private arbitrator decides instead of a court

D. A judge must approve every monthly bill the gym sends

MAIN — Identify the key terms of a contract and the questions to ask before signing

Question 5 of 5 · Learn and Apply

LEARN

In most states, including New Jersey, the age of majority is 18. Many contracts signed by minors are voidable by the minor, though contracts for necessities can be enforced. Businesses often require a parent to cosign.

Jamal is 17. In most states, what is generally true of contracts signed by minors?

A. They are stricter than adult contracts

B. The minor can often cancel them

C. They can never be signed at all

D. Parents automatically owe the money

BACKWARD B1 · concept review — What makes a contract

Question 1 of 5 · Knowledge Check

Question 3 of 5 · Knowledge Check

12 months at $25 a month is...

A. $37

B. $250

C. $300

D. $3,000

BACKWARD B1 · concept review — What makes a contract

Question 4 of 5 · Knowledge Check · Practical how-to

Why keep a copy of a signed contract?

A. To check the terms later

B. Copies are illegal to keep

C. It cancels the contract

D. It replaces the need to read it

BACKWARD B1 · concept review — What makes a contract

Question 5 of 5 · Knowledge Check · Practical how-to

Which should Jamal do before signing?

A. Sign quickly to avoid holding up the line

B. Read every page and ask questions

C. Read only the first page

D. Let the salesperson summarize it

GO DEEPER 1 — Getting out of a contract

Question 1 of 5 · Learn and Apply

LEARN

Early termination fees are often figured from the months left on the term.

Jamal cancels after 5 months of a 12-month gym contract. The fee is $20 for each remaining month. What is the fee?

A. $20

B. $100

C. $140

D. $240

GO DEEPER 1 — Getting out of a contract

Question 2 of 5 · Knowledge Check · Practical how-to

How should Jamal cancel to have proof?

A. By telling a trainer in the hallway

B. By just stopping payments

C. By deleting the gym app

D. In writing, keeping a dated copy

GO DEEPER 1 — Getting out of a contract

Question 3 of 5 · Learn and Apply · Practical how-to

LEARN

Banks can stop recurring payments and investigate unauthorized charges. Keep the cancellation proof.

After canceling, the gym keeps charging Jamal's debit card. What should he do first?

A. Ignore it and hope it stops

B. Stop opening his bank statements until it ends

C. Contact his bank and dispute the charges

D. Pay extra to make them stop

GO DEEPER 1 — Getting out of a contract

Question 4 of 5 · Knowledge Check

A contract says it "automatically renews for another 12 months unless canceled 30 days before the end." The term ends June 30. By about when must Jamal cancel?

A. By May 31

B. By June 30

C. By July 30

D. Any time in July

GO DEEPER 1 — Getting out of a contract

Question 5 of 5 · Knowledge Check

Which choice best protects Jamal before signing a long contract?

A. Signing two contracts at once

B. Prepaying three years

C. Asking for a month-to-month option

D. Skipping the cancellation section to save time

SET 106 · Contracts, Subscriptions, and Fees

Subscriptions, free trials, and phone plans

MAIN skill: Find the true cost of subscriptions and compare service plans

Outcome FL.CONTRACT.106 · National topic: Spending · NJSLS 9.1.12: PB, FP

Learning target: Calculate the cost of subscriptions and service plans and compare options

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

B1 · Concept review: Recurring charges (5 questions)

Why: Subscriptions are recurring charges; comparing plans needs total cost.

B2 · Math link → G8-S22-M (Grade 8 8.EE.C.8.c): Write and solve systems of linear equations for real-world problems

Why: Comparing two plans finds where two costs are equal.

After 5 of 5 correct, Go Deeper unlocks (a chain):

Go Deeper 1: Auditing subscriptions (5 questions)

Practical skills beyond the standards: Auditing subscriptions; Canceling a free trial

Content status: time-sensitive

Source: FTC (Negative option and automatic renewal offers) — Free trials and subscriptions often renew automatically and charge a card on file unless canceled; consumers should note renewal dates and how to cancel. Federal and state auto-renewal rules have changed in recent years. https://consumer.ftc.gov/articles/automatic-renewals-and-subscriptions

MAIN — Find the true cost of subscriptions and compare service plans

Question 1 of 5 · Learn and Apply

LEARN

Small monthly charges add up. Yearly cost = monthly cost × 12.

Jamal has three streaming services at $15.99 each per month. What do they cost in a year?

A. $47.97

B. $191.88

C. $479.70

D. $575.64

MAIN — Find the true cost of subscriptions and compare service plans

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Many free trials automatically become paid subscriptions. Note the end date and how to cancel when you sign up.

A free 7-day trial requires a card and converts to $12.99 a month. Jamal wants only the trial. What should he do?

A. Assume trials end on their own

B. Give a fake card number

C. Sign up twice to get a longer free trial

D. Set a reminder to cancel before day 7

MAIN — Find the true cost of subscriptions and compare service plans

Question 3 of 5 · Learn and Apply

LEARN

Set the costs equal: 25 + 10g = 45. Below that amount, Plan B is cheaper; above it, Plan A is.

Plan A: $45 a month, unlimited data. Plan B: $25 a month plus $10 per GB. At how many GB a month do the plans cost the same?

A. 4.5 GB

B. 2 GB

C. 20 GB

D. 7 GB

MAIN — Find the true cost of subscriptions and compare service plans

Question 4 of 5 · Knowledge Check

Plan A: $45 a month, unlimited data. Plan B: $25 a month plus $10 per GB. Jamal uses about 6 GB a month. Which is cheaper, and by how much?

A. Plan A, by $40 a month

B. Plan B, by $40 a month

C. Plan A, by $20 a month

D. Plan B, by $20 a month

MAIN — Find the true cost of subscriptions and compare service plans

Question 5 of 5 · Knowledge Check

A phone sells for $0 down and $33.34 a month for 36 months on a plan. What is the phone's total cost?

A. $0

B. $33.34

C. $400.08

D. $1,200.24

BACKWARD B1 · concept review — Recurring charges

When is a yearly plan a poor choice?

A. When you use it every day
B. When you may stop using it soon
C. When it is cheaper per month overall
D. When prices are rising

GO DEEPER 1 — Auditing subscriptions

Question 4 of 5 · Knowledge Check

Jamal shares a family plan for $60 a month with 3 other people, split equally. What is his share per year?

A. $15

B. $180

C. $240

D. $720

GO DEEPER 1 — Auditing subscriptions

Question 5 of 5 · Knowledge Check

A price-increase email says a subscription will rise from $12.99 to $15.99. What is the yearly increase?

A. $3

B. $36

C. $155.88

D. $191.88

SET 107 · Contracts, Subscriptions, and Fees

Fees, warranties, and the true price

MAIN skill: Find the total price with fees and evaluate warranties and buy now, pay later plans

Outcome FL.CONTRACT.107 · National topic: Spending · NJSLS 9.1.12: CDM, PB

Learning target: Calculate total prices including fees and evaluate warranties and installment plans

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

B1 · Concept review: Percent fees and flat fees (5 questions)

Why: Total price adds a percent fee and a flat fee to the base price.

B2 · Math link → G7-S65-M (Grade 7 7.RP.A.3): Find a percent fee and the total with the fee

Why: Fees are often a percent of the price added to the total.

After 5 of 5 correct, Go Deeper unlocks (a chain):

Go Deeper 1: Hidden costs (5 questions)

Practical skills beyond the standards: Comparing total prices with fees; Deciding on extended warranties

Content status: time-sensitive

Source: FTC (Unfair or deceptive fees rule) — A federal rule effective May 2025 requires live-event ticket and short-term lodging sellers to show the total price, including mandatory fees, up front. https://www.ftc.gov/legal-library/browse/rules/rule-unfair-or-deceptive-fees

Source: FTC (Warranties) — Explains written warranties, implied warranties, and service contracts (often called extended warranties). https://consumer.ftc.gov/articles/warranties

Source: CFPB (Buy now, pay later) — Buy now, pay later loans split a purchase into installments; missed payments can bring late fees. https://www.consumerfinance.gov/ask-cfpb/what-is-a-buy-now-pay-later-bnpl-loan-en-2108/

MAIN — Find the total price with fees and evaluate warranties and buy now, pay later plans

Question 1 of 5 · Learn and Apply

LEARN

Many purchases add fees: percent fees (a percent of the price) and flat fees (a set dollar amount). Compare total prices, not base prices. Federal rules now require ticket and hotel sellers to show the total price with mandatory fees up front.

A concert ticket costs $60, plus an 18% service fee and a $5 facility fee. What is the total?

A. $65.00

B. $70.80

C. $75.80

D. $83.00

MAIN — Find the total price with fees and evaluate warranties and buy now, pay later plans

Question 2 of 5 · Learn and Apply

LEARN

Buy now, pay later (BNPL) splits a purchase into installments, often with no interest if paid on time. Late fees and overlapping plans can make it costly.

A $600 laptop is split into 4 buy-now-pay-later payments. Jamal misses one and pays a $7 late fee. What does the laptop cost him?

A. $150

B. $600

C. $607

D. $628

MAIN — Find the total price with fees and evaluate warranties and buy now, pay later plans

Question 3 of 5 · Learn and Apply

LEARN

A warranty is a promise about a product's quality. A manufacturer's warranty usually covers defects for a set period. An "extended warranty" is a separate service contract you pay for.

What does a manufacturer's one-year warranty on a laptop usually cover?

A. Defects in parts or work

B. Damage from dropping it in a pool

C. Any problem for the life of the laptop

D. Theft of the laptop

MAIN — Find the total price with fees and evaluate warranties and buy now, pay later plans

Question 4 of 5 · Knowledge Check

An extended warranty for a $300 headphone set costs $60. What percent of the price is it?

A. 5%

B. 17%

C. 20%

D. 60%

MAIN — Find the total price with fees and evaluate warranties and buy now, pay later plans

Question 5 of 5 · Knowledge Check

Two hotels list $120 and $135 a night. The first adds a $30 nightly "resort fee"; the second has none. Which costs less per night?

A. The first, by $15

B. The second, by $45

C. The first, by $30

D. The second, by $15

BACKWARD B1 · concept review — Percent fees and flat fees

Question 5 of 5 · Knowledge Check

A warranty covers...

A. Anything that ever happens

B. Defects for a set time

C. Accidental drops and spills

D. Theft of the item

GO DEEPER 1 — Hidden costs

Question 1 of 5 · Knowledge Check

A debit card transaction at an out-of-network ATM costs a $3 bank fee and a $3.50 owner fee. Jamal does this 4 times a month. What are his yearly ATM fees?

A. $26

B. $78

C. $144

D. $312

GO DEEPER 1 — Hidden costs

Question 2 of 5 · Knowledge Check

A payment app charges 1.75% to transfer money instantly. On $400, what is the fee?

A. $0.70

B. $1.75

C. $7

D. $70

GO DEEPER 1 — Hidden costs

Question 3 of 5 · Learn and Apply

LEARN

Stores set return policies; "final sale" usually means no returns. In New Jersey, stores generally must post their refund policy.

A $120 jacket is "final sale." What does that usually mean?

A. It can be exchanged but not refunded, by law

B. It has a lifetime warranty

C. It must be returned within 30 days

D. It cannot be returned

GO DEEPER 1 — Hidden costs

Question 4 of 5 · Knowledge Check

Jamal has 3 BNPL plans with payments of $50, $75, and $40 due the same week. How much must he have ready?

A. $90

B. $115

C. $125

D. $165

GO DEEPER 1 — Hidden costs

Question 5 of 5 · Knowledge Check

Which question best tests whether an extended warranty is worth it?

A. Could I afford the repair myself?

B. Is the warranty price on sale today?

C. Does it cover more years than the product will last?

D. Do my friends own one?

SET 108 · Integrated Financial Decisions

Net worth

MAIN skill: Build a net worth statement and explain how decisions change net worth over time

Outcome FL.LIFE.108 · National topic: Saving · NJSLS 9.1.12: PB, FP

Learning target: Construct a net worth statement and explain how financial choices change it

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

B1 · Concept review: Assets and liabilities (5 questions)

Why: Net worth needs each item sorted correctly.

B2 · Math link → G7-S15-M (Grade 7 7.NS.A.1.b): Interpret sums of rational numbers in real-world situations

Why: Net worth combines positive assets and negative debts.

After 5 of 5 correct, Go Deeper unlocks (a chain):

Go Deeper 1: Tracking net worth (5 questions)

Practical skills beyond the standards: Building a net worth statement

Content status: stable

MAIN — Build a net worth statement and explain how decisions change net worth over time

Question 1 of 5 · Learn and Apply

LEARN

Net worth = assets (what you own) − liabilities (what you owe). A net worth statement lists both. It is a snapshot of financial health at one point in time.

Nia has checking $1,200, savings $3,000, a car worth $9,000, and a Roth IRA of $2,500. She owes a $6,000 car loan, an $800 credit card balance, and $5,000 in student loans. What is her net worth?

A. $3,900

B. $11,800

C. $15,700

D. $27,500

MAIN — Build a net worth statement and explain how decisions change net worth over time

Question 2 of 5 · Learn and Apply

LEARN

Assets are things you own that have value. Liabilities are debts you owe.

Which item is a liability?

A. Money in a savings account

B. A car Nia owns

C. An unpaid credit card balance

D. Shares in an index fund she owns

MAIN — Build a net worth statement and explain how decisions change net worth over time

Question 3 of 5 · Learn and Apply

LEARN

Paying a debt from savings lowers an asset and a liability by the same amount, so net worth does not change at that moment, though future interest costs fall.

Nia pays $500 from savings toward her credit card balance. What happens to her net worth?

A. It falls by $500

B. It stays the same

C. It rises by $500

D. It rises by $1,000

MAIN — Build a net worth statement and explain how decisions change net worth over time

Question 4 of 5 · Knowledge Check

Nia's car loses $1,500 in value this year while her loan balance falls by $2,000. Ignoring everything else, how does her net worth change from the car?

A. It falls by $1,500

B. It rises by $500

C. It rises by $2,000

D. It falls by $3,500

MAIN — Build a net worth statement and explain how decisions change net worth over time

Question 5 of 5 · Knowledge Check

Why is a young adult's negative net worth not always a crisis?

A. Negative net worth means you owe nothing

B. Banks ignore net worth

C. Net worth never changes

D. Debt for education can be an investment in future income

BACKWARD B1 · concept review — Assets and liabilities

C. $7,400

D. $11,300

GO DEEPER 1 — Tracking net worth

Question 2 of 5 · Learn and Apply

LEARN

Liquidity is how easily an asset can be turned into cash without losing value.

Which asset is most liquid?

A. Money in checking

B. A car

C. A house

D. A 5-year CD at a bank

GO DEEPER 1 — Tracking net worth

Question 3 of 5 · Knowledge Check

Nia's Roth IRA grows from $2,500 to $2,750. What percent did it grow?

A. 9.1%

B. 10%

C. 25%

D. 250%

GO DEEPER 1 — Tracking net worth

Question 4 of 5 · Knowledge Check · Practical how-to

How often might Nia update her net worth statement?

A. Every minute

B. Once or twice a year

C. Only once in her life

D. Every day, to react to each change

GO DEEPER 1 — Tracking net worth

Question 5 of 5 · Knowledge Check

Buying a $1,000 TV on a credit card changes net worth how, at that moment?

A. It rises by $1,000

B. It falls by $2,000

C. It is unaffected forever

D. It falls by about the TV's lost resale value

SET 109 · Integrated Financial Decisions

Charitable giving and civic responsibility

MAIN skill: Plan charitable giving, research charities, and understand the tax treatment of donations

Outcome FL.LIFE.109 · National topic: Spending · NJSLS 9.1.12: CFR, PB

Learning target: Plan charitable giving and evaluate charities, including tax treatment of donations

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Why and how people give (5 questions)
  - Why: Planning giving uses percents and knowledge of how charities work.
- B2 · Math link → G6-S10-M (Grade 6 6.RP.A.3.c): Find a percent of a quantity as a rate per 100
  - Why: Giving plans are often a percent of income.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Giving wisely (5 questions)

Practical skills beyond the standards: Researching a charity

Content status: time-sensitive

Source: IRS (Tax Exempt Organization Search) — Lists organizations eligible to receive tax-deductible charitable contributions. https://apps.irs.gov/app/eos/

Source: IRS (Charitable contributions) — Charitable contributions are generally deductible only for taxpayers who itemize deductions, and only to qualified organizations; rules can change by tax year. https://www.irs.gov/charities-non-profits/charitable-organizations/charitable-contribution-deductions

Source: New Jersey Division of Consumer Affairs (Charities Registration) — Most charities that solicit in New Jersey must register with the state, and residents can look up registration status. https://www.njconsumeraffairs.gov/charities/

Source: FTC (Donating wisely) — Research charities before giving, be wary of pressure and payment by gift card or wire, and watch for scams after disasters. https://consumer.ftc.gov/articles/donating-wisely-avoiding-charity-scams

MAIN — Plan charitable giving, research charities, and understand the tax treatment of donations

Question 1 of 5 · Learn and Apply

LEARN

Many people plan giving as part of their budget, often as a percent of income. Giving time (volunteering) and skills also counts.

Nia wants to give 5% of her $2,400 monthly take-home pay to charity. How much is that each month?

A. $12

B. $120

C. $480

D. $1,200

MAIN — Plan charitable giving, research charities, and understand the tax treatment of donations

Question 2 of 5 · Learn and Apply · Practical how-to

LEARN

Research charities with the IRS Tax Exempt Organization Search, the charity's own reports, and charity evaluators. In New Jersey, most charities that ask for donations must register with the Division of Consumer Affairs.

Before donating to a charity she has never heard of, what should Nia check?

A. Its registration and how it uses money

B. Only the emotional story told in its ad

C. How fast the caller wants payment

D. Whether it accepts gift cards

MAIN — Plan charitable giving, research charities, and understand the tax treatment of donations

Question 3 of 5 · Knowledge Check

After a hurricane, a stranger texts asking for donations by wire transfer to a personal account. What is this most likely?

A. A normal disaster relief method

B. A verified disaster relief charity

C. A normal fundraiser by a local group

D. A charity scam

MAIN — Plan charitable giving, research charities, and understand the tax treatment of donations

Question 4 of 5 · Learn and Apply

LEARN

Charitable donations to qualified organizations are generally deductible only for taxpayers who itemize. A deduction lowers taxable income; it is not a dollar-for-dollar refund. Rules can change by tax year.

Nia takes the standard deduction. Can she generally deduct her $1,440 of yearly donations on her federal return?

A. Yes; every donation is fully deductible for everyone

B. No; donations generally require itemizing

C. Yes; she gets the $1,440 back as a refund

D. No; donations are taxed as income

MAIN — Plan charitable giving, research charities, and understand the tax treatment of donations

Question 5 of 5 · Knowledge Check

Nia volunteers 4 hours a week at a food bank for 12 weeks. How many hours does she give?

A. 3

B. 16

C. 48

D. 480

BACKWARD B1 · concept review — Why and how people give

MAIN skill: Use total value, opportunity cost, and a decision matrix to compare major choices

Outcome FL.LIFE.112 · National topic: Spending · NJSLS 9.1.12: FP, PB

Learning target: Apply opportunity cost and systematic comparison to major financial decisions

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

- B1 · Concept review: Choices and tradeoffs (5 questions)
  - Why: Every choice gives up an alternative.
- B2 · Math link → G6-S44-M (Grade 6 6.EE.A.2.c): Evaluate expressions and formulas for given values
  - Why: Decision matrices and growth formulas are evaluated with numbers.

After 5 of 5 correct, Go Deeper unlocks (a chain):

- Go Deeper 1: Thinking in totals (5 questions)

Practical skills beyond the standards: Comparing job offers by total value; Using a decision matrix

Content status: stable

MAIN — Use total value, opportunity cost, and a decision matrix to compare major choices

Question 1 of 5 · Learn and Apply

LEARN

Compare offers by total value: salary plus benefits (match, health coverage) minus job costs (commuting, required equipment).

Job A pays $50,000 with $3,000 of yearly commuting costs and no 401(k) match. Job B pays $47,000, is remote, and matches $1,410. Comparing pay − commute + match, which is worth more?

A. Job A, by $3,000

B. They are worth the same

C. Job B, by $1,410

D. Job B, by $4,410

MAIN — Use total value, opportunity cost, and a decision matrix to compare major choices

Question 2 of 5 · Learn and Apply

LEARN

Opportunity cost is the value of the next-best alternative you give up.

Nia spends $4,000 on a trip instead of investing it. What is the opportunity cost?

A. What the $4,000 could have grown to

B. Nothing, since she enjoyed the trip

C. Only the sales tax

D. The airline's profit

MAIN — Use total value, opportunity cost, and a decision matrix to compare major choices

Question 3 of 5 · Learn and Apply

LEARN

A decision matrix scores each option on criteria and multiplies by how much each criterion matters (its weight). Highest total wins.

In a decision matrix, Option 1 scores 4 on cost (weight 3) and 2 on fun (weight 1). What is its weighted score?

A. 6

B. 10

C. 14

D. 24

MAIN — Use total value, opportunity cost, and a decision matrix to compare major choices

Question 4 of 5 · Knowledge Check

$4,000 invested at 7% a year for 30 years grows to about $4,000 × 7.61. About how much is that?

A. $4,280

B. $5,200

C. $12,400

D. $30,440

MAIN — Use total value, opportunity cost, and a decision matrix to compare major choices

Question 5 of 5 · Knowledge Check · Practical how-to

Which habit leads to better big decisions?

A. Deciding fast under sales pressure

B. Choosing what friends choose

C. Looking only at the monthly payment

D. Waiting a day and comparing options in writing

BACKWARD B1 · concept review — Choices and tradeoffs

Question 1 of 5 · Knowledge Check

Opportunity cost is…

A. The price tag

B. The money spent

C. The next-best option given up

D. The total of all options

BACKWARD B1 · concept review — Choices and tradeoffs

Question 2 of 5 · Knowledge Check

5 × 2 + 3 × 1 = ?

A. 11

B. 13

C. 16

D. 30

BACKWARD B1 · concept review — Choices and tradeoffs

Question 3 of 5 · Knowledge Check

Which is a benefit worth money in a job offer?

A. A fancy job title alone

B. A 401(k) match

C. A free mug

D. A long commute

BACKWARD B1 · concept review — Choices and tradeoffs

Question 4 of 5 · Knowledge Check

$48,000 + $1,200 = ?

A. $46,800

B. $48,120

C. $49,200

D. $60,000

BACKWARD B1 · concept review — Choices and tradeoffs

Question 5 of 5 · Knowledge Check

A tradeoff means...

A. Getting everything at once

B. A choice with no downside

C. Getting one thing by giving up another

D. A type of loan

GO DEEPER 1 — Thinking in totals

Question 1 of 5 · Knowledge Check

Option 1: buy a $1,200 laptop now on a card at 24% and pay it off in 12 payments of $113.47 ($1,361.64 total). Option 2: save $100 a month and buy it in 12 months. How much does saving first avoid?

A. $161.64

B. $288.00

C. $1,200.00

D. $1,361.64

GO DEEPER 1 — Thinking in totals

Question 2 of 5 · Knowledge Check

A $30 weekly takeout habit costs how much a year?

A. $120

B. $360

C. $1,560

D. $3,000

GO DEEPER 1 — Thinking in totals

Question 3 of 5 · Knowledge Check

Which question best tests a big purchase?

A. What will it cost in total, and what will I give up?

B. Will it impress people?

C. Is the monthly payment low?

D. Is it on sale today?

GO DEEPER 1 — Thinking in totals

Question 4 of 5 · Knowledge Check

Option X scores 4, 3, 5 on criteria weighted 2, 1, 1. Option Y scores 3, 5, 4. Which wins?

A. Option Y, 15 to 16

B. Tie at 12

C. Option Y, 12 to 12

D. Option X, 16 to 15

GO DEEPER 1 — Thinking in totals

Question 5 of 5 · Knowledge Check

Why might a lower-paying job still be the better choice?

A. Lower pay always means more happiness at work

B. Better benefits, growth, or lower costs

C. Pay does not matter at all

D. Taxes are always zero on lower pay

SET 113 · Integrated Financial Decisions

Capstone: a financial checkup

MAIN skill: Apply banking, credit, saving, investing, insurance, and tax knowledge to one person's situation

Outcome FL.LIFE.113 · National topic: Saving · NJSLS 9.1.12: PB, FP, RM

Learning target: Integrate earning, spending, saving, investing, credit, and risk decisions into one personal financial plan

If the MAIN attempt has 3 or fewer correct, the student works these backward sections in order, then returns to a fresh MAIN set:

B1 · Concept review: Connecting the topics (5 questions)

Why: A checkup uses ideas from every earlier unit.

B2 · Math link → G7-S29-M (Grade 7 7.EE.B.3): Solve multistep problems with positive and negative rational numbers in any form

Why: The checkup combines percents and differences across topics.

After 5 of 5 correct, Go Deeper unlocks (a chain):

Go Deeper 1: A five-year plan (5 questions)

Practical skills beyond the standards: Running a personal financial checkup; Writing a five-year plan

Content status: stable

MAIN — Apply banking, credit, saving, investing, insurance, and tax knowledge to one person's situation

Question 1 of 5 · Knowledge Check

Nia's checkup: $900 emergency savings, a $2,000 credit card balance at 24%, and an unused 401(k) match. Which step should come first?

A. Pay off the credit card before any saving

B. Spend the savings on a vacation

C. Open three new credit cards

D. Contribute enough to get the full match

MAIN — Apply banking, credit, saving, investing, insurance, and tax knowledge to one person's situation

Question 2 of 5 · Knowledge Check

Nia's credit card charges 24% APR. About how much interest builds in one month on $2,000?

A. $4

B. $24

C. $40

D. $480

MAIN — Apply banking, credit, saving, investing, insurance, and tax knowledge to one person's situation

Question 3 of 5 · Knowledge Check

Which insurance is Nia, a renter with no dependents, most likely missing if she has only health and auto?

A. Renters insurance

B. Large whole life insurance

C. Flood insurance for a building she does not own

D. Mortgage insurance

MAIN — Apply banking, credit, saving, investing, insurance, and tax knowledge to one person's situation

Question 4 of 5 · Knowledge Check

Nia invests $200 a month and her account earns 7% a year. What is the best description?

A. Gambling, since every single investment is just a coin flip

B. Investing regularly, which builds wealth over time

C. Saving with a guaranteed 7% return

D. Borrowing, because the account charges interest

MAIN — Apply banking, credit, saving, investing, insurance, and tax knowledge to one person's situation

Question 5 of 5 · Knowledge Check

Nia's W-2 shows $3,600 federal tax withheld; her tax owed is $3,150. What happens when she files?

A. She owes $450

B. She gets a $3,600 refund

C. She gets a $450 refund

D. She owes $3,150 more

BACKWARD B1 · concept review — Connecting the topics

Question 1 of 5 · Knowledge Check

Which account is best for an emergency fund?

A. A stock fund

B. A 5-year CD

C. A high-yield savings account

D. A retirement account like a 401(k)

BACKWARD B1 · concept review — Connecting the topics

Question 2 of 5 · Knowledge Check

24% ÷ 12 = ?

A. 0.5%

B. 2%

C. 12%

D. 288%

Question 5 of 5 · Knowledge Check

Diversification means...

A. Buying one stock

B. Spreading money across many investments

C. Keeping cash only

D. Borrowing to invest

GO DEEPER 1 — A five-year plan

Question 1 of 5 · Knowledge Check

Nia sets 5-year goals: emergency fund $6,000, car fund $8,000, and $15,000 invested. What is the total she plans to set aside?

A. $14,000

B. $21,000

C. $23,000

D. $29,000

GO DEEPER 1 — A five-year plan

Question 2 of 5 · Knowledge Check

Spread evenly over 60 months, about how much a month is $29,000?

A. $290.00

B. $483.33

C. $580.00

D. $2,416.67

GO DEEPER 1 — A five-year plan

Question 3 of 5 · Knowledge Check

Nia's take-home pay is $3,400 and she can save $480 a month. What percent is that, to the nearest whole percent?

A. 7%

B. 14%

C. 48%

D. 71%

GO DEEPER 1 — A five-year plan

Question 4 of 5 · Knowledge Check · Practical how-to

Which check-in habit keeps a five-year plan on track?

A. Setting goals once and never looking at them again

B. Reviewing goals and budget every few months

C. Changing goals every day

D. Hiding statements unopened

GO DEEPER 1 — A five-year plan

Question 5 of 5 · Knowledge Check

A job loss happens in year 2. Which part of her plan helps most right away?

A. The car fund she spends on a new car

B. A new credit card

C. The emergency fund

D. Her Roth IRA earnings
