Set 1: What a business is

Outcome ENT.START.01: Describe a business as solving a problem for customers who pay, and tell revenue-seeking activity from a hobby

Module: Foundation 1: Start here

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A business sells something people want: a service, a product, a digital file, or content. An entrepreneur is a person who starts and runs a business and takes on its risk. The key test is simple: does it solve a problem or meet a want for customers who are willing to pay? A hobby is done mainly for enjoyment; it may sell sometimes, but it is not organized to earn money. A business plans to earn more than it spends over time, even if it starts small.

Dana bakes bread for fun and gives it to friends. Which change would turn this into a business?

A. She buys a bigger, more expensive oven so she can bake more loaves at once.

B. She posts photos of her bread online each day.

C. She bakes twice as many loaves to give away.

D. She starts selling loaves each week to neighbors who pay for them.

Learn
Think of a lemonade stand. It has something to sell (lemonade), people who want it (thirsty walkers), and a price they pay. That is the core of any business: something people want, customers, and payment. If you take away the paying customers, you have a hobby or a gift. Bigger businesses add more steps, but the core stays the same: a want or problem, an offer that meets it, and customers who pay.

A lemonade stand sells cups to walkers who pay 1 dollar. What are the walkers?

A. The owners
B. The employees
C. The customers
D. The suppliers

Set 2: Side business or full-time business

Outcome ENT.START.02: Compare a side business with a full-time business by time, income needs and risk

Module: Foundation 1: Start here

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A side business runs alongside a job or school. A full-time business is your main work and main income. A side business usually has less risk, because a paycheck or other income still covers living costs while you test the idea, but it has less time. A full-time business has more time but more risk: if sales are slow, personal bills may go unpaid. Many owners start on the side, then decide later using evidence such as steady sales, savings and a clear plan.

Mia works 40 hours a week and wants to test a pet-sitting idea. Which plan has the lower personal risk?

A. Borrow money to open a large pet hotel later this month
B. Sign a long lease for a pet store
C. Keep her job and pet-sit on weekends to test demand
D. Quit her job today to pet-sit full time

A side business usually has less risk, because a paycheck or other income still covers living costs while you test the idea, but it has less time. A full-time business has more time but more risk: if sales are slow, personal bills may go unpaid. Many owners start on the side, then decide later using evidence such as steady sales, savings and a clear plan.

Which is a good reason to keep a business on the side for now?

A. Sales are growing but still below personal living costs.
B. The business is fully booked every day.
C. The owner has no other source of income.
D. Sales already cover all costs with plenty of savings to spare.

A side business runs alongside a job or school. A full-time business is your main work and main income. A side business usually has less risk, because a paycheck or other income still covers living costs while you test the idea, but it has less time. A full-time business has more time but more risk: if sales are slow, personal bills may go unpaid. Many owners start on the side, then decide later using evidence such as steady sales, savings and a clear plan.

Grace runs a side bakery that makes 600 dollars a month. Going full time might triple sales to 1,800 dollars. Her bills are 2,400 dollars a month. What should she conclude?

A. Tripled sales would leave money to spare.
B. The numbers do not really matter for this kind of decision.
C. She should quit because sales would grow.
D. Even tripled sales would not cover her bills yet.

Outcome ENT.START.03: Classify a business idea as a service, physical product, digital product or content business, and name what each needs

Module: Foundation 1: Start here

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Most small businesses sell in one of four ways. A SERVICE sells time and skill, such as cleaning or tutoring; the owner's hours are the limit. A PHYSICAL PRODUCT is an item someone makes or buys and then sells, which means stock, packaging and shipping. A DIGITAL PRODUCT is a file, course or app delivered online; one copy can be sold many times, but it needs support and updates. CONTENT, such as videos or newsletters, attracts an audience and earns through sponsors, ads, affiliates or the creator's own products.

Jada offers house cleaning for 30 dollars an hour. What kind of business is this?

A. A digital product
B. A content business
C. A service
D. A physical product

Set 4: Founder case: Ben & Jerry's starts small

Outcome ENT.CASE.01: Apply a documented early decision (learning a skill cheaply and starting with one small shop) to a new small business

Module: Foundation 1: Start here

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Documented history: Ben Cohen and Jerry Greenfield took a $5 correspondence (mail) course in ice cream making from Penn State. In 1978 they opened their first scoop shop in a renovated gas station in Burlington, Vermont. They had first thought about bagels, but the equipment cost too much. Lesson drawn by this course (an interpretation, not their words): learn the skill cheaply, pick an idea whose start-up costs you can afford, and begin with one small location. One success story does not guarantee the same result for another business.

According to the passage, how did the founders learn ice cream making?

A. Buying an existing ice cream company
B. Working several years in a big ice cream factory first
C. A degree in food science
D. A low-cost correspondence course from Penn State

REFERENCE LABEL: NOT PART OF THE QUESTION ID S4-M-Q1

Which statement about the Ben & Jerry's case is accurate?

A. It shows founders must start in old gas stations to succeed.
B. It shows courses are never useful.
C. It shows one start, not a guaranteed result for other shops.
D. It proves any ice cream shop will succeed.

REFERENCE LABEL: NOT PART OF THE QUESTION ID S4-M-Q5
Entrepreneurship, Set 4: Founder case: Ben & Jerry's starts small · MAIN · Q5/5 · Outcome ENT.CASE.01 (local)

Learn
A good lesson from a founder story uses what is documented, such as a course taken, a first location, or a choice between two ideas. Enthusiasm is different: a friend saying "your shop will be amazing" is a feeling, not evidence. When you study a case, separate the facts that are recorded from the hopes and from later success. Later fame does not prove that each early step was the reason; it only shows what happened in that case.

Which is documented in the passage about Ben & Jerry's?

A. They opened their first shop in a renovated gas station.
B. They knew from the first day that they would be very famous.
C. Every customer loved the first flavor.
D. They never had any doubts.

Learn
A good lesson from a founder story uses what is documented, such as a course taken, a first location, or a choice between two ideas. Enthusiasm is different: a friend saying "your shop will be amazing" is a feeling, not evidence. When you study a case, separate the facts that are recorded from the hopes and from later success. Later fame does not prove that each early step was the reason; it only shows what happened in that case.

A friend says, "Your ice cream idea will definitely work." What is this?

A. A signed customer contract
B. Enthusiasm, not evidence
C. Proof of demand
D. A documented sale

Learn
Documented history: Ben Cohen and Jerry Greenfield took a $5 correspondence (mail) course in ice cream making from Penn State. In 1978 they opened their first scoop shop in a renovated gas station in Burlington, Vermont. They had first thought about bagels, but the equipment cost too much. Lesson drawn by this course (an interpretation, not their words): learn the skill cheaply, pick an idea whose start-up costs you can afford, and begin with one small location. One success story does not guarantee the same result for another business.

Ivy wants to open a bike-repair business. Bike-shop rent is high in her town. Applying the lesson, what is the best start?

A. Sign a five-year lease on a large shop on the main street now
B. Learn repairs through an affordable class and start with mobile repairs
C. Open in three neighborhoods at once
D. Buy every tool before her first customer

Set 5: Finding a real customer problem

Outcome ENT.CUST.01: Identify a specific, frequent problem that someone already spends time or money on

Module: Foundation 2: Customers and offers

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A good business idea starts with a real problem. A real problem happens often, matters to the person, and is something they already spend time or money trying to solve. "People might like this" is weak. "Parents in my neighborhood drive 30 minutes twice a week to a tutor" is strong, because it describes a costly habit that already exists. Look for complaints, workarounds (homemade fixes), and money already being spent.

Which statement describes the strongest customer problem?

A. Some people might enjoy a new kind of phone case someday.
B. Restaurant owners spend hours each week fixing their online menus.
C. My friends said a glow-in-the-dark mug sounds kind of fun.
D. Everyone would probably like more free time in their lives, so it is a problem.

A good business idea starts with a real problem. A real problem happens often, matters to the person, and is something they already spend time or money trying to solve. "People might like this" is weak. "Parents in my neighborhood drive 30 minutes twice a week to a tutor" is strong, because it describes a costly habit that already exists. Look for complaints, workarounds (homemade fixes), and money already being spent.

A student found that dorm residents lose keys often. Replacing a key costs 25 dollars and happens to about 40 residents per term. What total amount do residents spend on replacements each term?

A. 40 dollars
B. 65 dollars
C. 250 dollars
D. 1,000 dollars

Set 6: Naming a specific customer

Outcome ENT.CUST.02: Describe a specific customer group instead of "everyone"

Module: Foundation 2: Customers and offers

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
"Everyone" is not a customer. A specific customer is a group you can describe and find: who they are, what situation they are in, and where they can be reached. "Busy people" is too broad. "Parents of children ages 6 to 10 who both work full time in our town" is specific. A specific customer helps you choose words, prices, and places to advertise. You can widen the group later, after you learn what works for the first group.

Which customer description is the most specific?

A. Small businesses of every kind everywhere in the whole world
B. Anyone in Texas who might want to buy things
C. People who like food and eat out sometimes
D. Owners of food trucks in Austin who take card payments

You can widen the group later, after you learn what works for the first group.

Why does a specific customer group help a new business?

A. It guides words, prices and where to advertise.
B. It guarantees that every customer will buy at once.
C. It removes the need to test the idea with anyone.
D. It means the business can never sell to others later.

Learn
Narrowing works in steps. Start with "people who need meals." Add a situation: "people who need meals after surgery." Add a place: "in our city." Add who decides: "usually a family member who orders." Each step removes people who are unlikely to buy and keeps the ones with a clear need. A narrow group is not small thinking; it is a clear target you can actually reach and serve well.

Which step narrows "people who need meals" by situation?

A. People who eat food
B. People recovering from surgery
C. People who live on planet Earth
D. People who like meals

Set 7: Writing a clear offer

Outcome ENT.CUST.03: Write an offer (value proposition) that says who it is for, the problem and the result

Module: Foundation 2: Customers and offers

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
An offer (also called a value proposition) says, in plain words, who it is for, what problem it solves, and what result the customer gets. A simple pattern: "For [customer] who [problem], we [what you do] so you can [result]." For example: "For busy pet owners who work late, we walk your dog at lunch so it gets exercise and you do not rush home." A clear offer is specific, honest and easy to repeat. It avoids vague phrases like "best quality" that do not say what the customer gets.

Which offer is the clearest?

A. Our company has many years of fitness experience in sports.
B. We offer the very best fitness services and the highest quality for all of you.
C. Fitness for everyone, everywhere, always, at great prices.
D. For new runners, we create 8-week plans so you finish your first 5K injury-free.

C. Tutoring that is simply better than all the others
D. For 7th graders behind in fractions: weekly 1-on-1 practice with a written plan

REFERENCE LABEL: NOT PART OF THE QUESTION ID S7-F1-Q3
Entrepreneurship, Set 7: Writing a clear offer · FORWARD 1: APPLY IT · Q3/5 · Outcome ENT.CUST.03 (local)

Learn
An offer (also called a value proposition) says, in plain words, who it is for, what problem it solves, and what result the customer gets. A simple pattern: "For [customer] who [problem], we [what you do] so you can [result]." For example: "For busy pet owners who work late, we walk your dog at lunch so it gets exercise and you do not rush home." A clear offer is specific, honest and easy to repeat. It avoids vague phrases like "best quality" that do not say what the customer gets.

Two offers for a cleaning service. A: "Spotless homes." B: "For renters moving out: a deposit-ready clean in one day." The owner wants more move-out jobs. Which fits that goal?

A. Both are the same, because both mention cleaning
B. Neither, because offers do not affect bookings
C. Offer B, because it names move-out renters
D. Offer A, because shorter is always better

Set 8: Customer or user: who pays?

Outcome ENT.CUST.04: Tell the paying customer from the user and the decision-maker

Module: Foundation 2: Customers and offers

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
The CUSTOMER is the person or organization who pays. The USER is the person who uses the product or service. Sometimes they are the same; sometimes they are different. A parent pays for a child's piano lessons; the child is the user. A company pays for software its workers use. There may also be a DECISION-MAKER who chooses, like a manager who approves a purchase. To sell well, you must convince whoever pays and decides, while also making the product work for the user.

A school pays for a reading app that students use. Who is the paying customer?

A. The students who use the app every day
B. The app's designers who built the screens
C. The parents who never see the bill
D. The school

Set 9: Founder case: Spanx and a problem the founder had

Outcome ENT.CASE.02: Apply a documented early decision (solving a problem you have and checking that others share it) to a new business

Module: Foundation 2: Customers and offers

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Documented history: Sara Blakely cut the feet off control-top pantyhose to wear under white pants. She started Spanx in 2000 with $5,000 of her own savings. Several hosiery manufacturers turned her down before one agreed to make the product, and she got it into the Neiman Marcus department store. Lesson drawn by this course (an interpretation, not her words): a problem you have yourself can be a starting point, but you still need evidence that many others share it and will buy. One success story does not guarantee the same result.

According to the passage, what problem did Blakely start with?

A. She wanted to open a factory for making fabric.
B. She wanted cheaper shoes for running on trails.
C. She wanted a new kind of store for selling dresses.
D. She wanted a smooth look under white pants.

Your own problem is a clue, not proof. If you are frustrated by something, ask: do many other people have this same frustration, and do they spend money on it? One person is a sample of one. A market is many people with the same need who will pay. You find out by asking others about their experience and by testing whether they will buy, not by assuming they feel what you feel.

What is a market, in plain words?

A. A building where products are sold
B. One person with a strong opinion
C. A list of your friends' favorite things to buy
D. Many people with the same need who will pay

Learn
Documented history: Sara Blakely cut the feet off control-top pantyhose to wear under white pants. She started Spanx in 2000 with $5,000 of her own savings. Several hosiery manufacturers turned her down before one agreed to make the product, and she got it into the Neiman Marcus department store. Lesson drawn by this course (an interpretation, not her words): a problem you have yourself can be a starting point, but you still need evidence that many others share it and will buy. One success story does not guarantee the same result.

Ana hates that her reusable water bottle leaks in her bag. Which first step best applies the lesson?

A. Post a logo and wait for orders
B. Ask only her mother whether bottles leak
C. Buy a bottle factory before telling anyone about the idea
D. Survey commuters about leaking bottles and what they do now

Set 10: Customer interviews about past behavior

Outcome ENT.TEST.01: Plan interview questions about what people already do rather than what they say they would do

Module: Foundation 3: Testing demand

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A customer interview is a short conversation to learn about someone's real problems. The most useful questions ask about what people already DID, not what they say they WOULD do. "Tell me about the last time you looked for a babysitter" gives real facts: how long it took, what they paid, what went wrong. "Would you use my babysitting app?" invites polite guesses. Past behavior is better evidence than predictions, because people are often too kind or too hopeful about the future.

Which interview question gives the most reliable information?

A. Would you hire a tutor if I offered one next year?
B. Do you think tutoring is a good idea for most kids?
C. How much would you be willing to pay for my service?
D. When did you last hire a tutor, and how did you find one?

REFERENCE LABEL: NOT PART OF THE QUESTION ID S10-M-Q1

Past behavior is better evidence than predictions, because people are often too kind or too hopeful about the future.

Why are questions about the future weaker evidence?

A. People cannot remember anything about the past.
B. Future answers are always negative and unhelpful.
C. People often guess kindly or hopefully.
D. Future questions are against interview rules.

Set 11: Avoiding leading questions

Outcome ENT.TEST.02: Recognize and rewrite leading or yes-pushing interview questions

Module: Foundation 3: Testing demand

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A leading question pushes a person toward a particular answer. "Don't you hate waiting for the bus?" pushes toward yes. "Wouldn't it be great to have an app for that?" pushes toward praise. A neutral question lets the person answer honestly: "How do you usually get to work?" or "What, if anything, bothers you about your commute?" Leading questions make an idea look better than it is. Neutral questions, about real experience, make the results trustworthy.

Which question is leading?

A. How often do you eat homemade baked goods each month?
B. Don't you think our cookies taste better than store-bought ones?
C. Where do you usually buy desserts for family events?
D. What kind of cookies did you buy last time you shopped?

Learn
Competitors are businesses selling something similar to the same customers. Alternatives are any other way customers solve the problem today, including doing it themselves, using a free tool, or doing nothing. A lawn-care business competes with other lawn services, but also with homeowners who mow their own lawns. Studying competitors and alternatives shows what customers already accept, what they pay, and what they complain about. "No competition" usually means you have not looked hard enough, or that few people want it.

A town has no dog groomers. Before celebrating, what should a founder check first?

A. Whether the founder enjoys bathing dogs
B. Whether people drive to groomers elsewhere or groom at home
C. Whether the town likes dogs in general
D. Whether a dog groomer logo would be easy and cheap to design

Set 13: Testing a small version first

Outcome ENT.TEST.04: Choose a small, cheap test that answers one question about demand

Module: Foundation 3: Testing demand

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Before spending a lot, test a small version of the idea. A small test is cheap, quick, and answers one question, such as "Will people book a pet-sitting visit?" Examples: offering a service to a few customers, selling 20 handmade items at one market, a simple sign-up page, or a pre-order. A good test has a clear question, a small cost, a time limit, and a result you decide in advance would count as success. Testing first avoids building something large that nobody buys.

Which is the best small test for a homemade granola idea?

A. Design packaging for 20 flavors right away
B. Wait a year to perfect the recipe in private
C. Sell 30 bags at a weekend farmers market
D. Rent a factory to make 50,000 bags first

Learn
The strongest evidence that people want something is that they pay for it, or commit money in advance. From strongest to weakest: real purchases; paid pre-orders or deposits; signed agreements; sign-ups that ask for real effort, such as booking a time; email sign-ups; and finally compliments, likes and "I would buy that." Each step down costs the person less, so it means less. When testing an idea, aim for evidence near the top: something people give up money or real effort to get.

A founder of a meal-prep service can run one test. Which gathers the strongest evidence?

A. Post a poll asking if people like healthy food
B. Take paid orders for next week's meals
C. Count likes on a meal photo
D. Ask friends to say it sounds good

A crafts seller collected 200 email sign-ups but only 3 sales from them. What should she conclude?

A. Sales do not really matter when email sign-ups are this high.
B. Interest is mild; many sign-ups did not turn into buying.
C. Demand is huge because of 200 sign-ups.
D. She should stop selling completely now.

Set 15: Likes and praise are not demand

Outcome ENT.TEST.06: Explain why likes, follows and compliments are weak demand signals

Module: Foundation 3: Testing demand

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Likes, follows, views and compliments feel good, but they are weak signs of demand. They cost people nothing, so many people give them freely. A post with 2,000 likes may lead to zero sales. Followers can also be people who enjoy your content but will never buy, or accounts that are not real people. To judge demand, look for actions that cost the person something: purchases, deposits, bookings, or replies asking how to buy. Treat likes as a sign of attention, not of buying.

A post about a new candle got 3,000 likes and 2 sales. What does this most likely show?

A. Many people noticed it, but few wanted to buy.
B. The likes prove sales will rise soon.
C. Demand is very strong because of the likes.
D. Likes and sales always move together.

REFERENCE LABEL: NOT PART OF THE QUESTION ID S15-M-Q1

Learn
After a test, decide: continue, change, or stop. CONTINUE when the results meet the target you set in advance. CHANGE (sometimes called a pivot) when part of the idea works but something important does not: a different customer, price, or offer might fit better. STOP when the results are far below the target and nothing points to a better version, or when the cost of continuing is too high. Stopping is not failing; it protects time and money for a better idea.

Why is stopping sometimes the right decision?

A. It always earns money back.
B. It proves the founder made no mistakes.
C. It is required after any first test.
D. It saves time and money for a better idea.

Think of baking a new cookie for a school sale. If most cookies sell, keep making them (continue). If people love the taste but say the cookies are too big for the price, make them smaller (change). If almost no one buys and no one says why, try a different treat (stop). The decision follows the results and what people told you, not how much you hoped it would work.

Most cookies sold. What is the choice?

A. Change
B. Continue
C. Ignore it
D. Stop

Stopping is not failing; it protects time and money for a better idea.

A tutoring test set a target of 8 students. It got 9 students, but each needs 2 hours of travel. The tutor's goal is to earn at least 25 dollars per hour of total time. Each session pays 40 dollars for 1 hour of teaching. What should the tutor conclude?

A. Raise the target to 20 students

B. Stop, because tutoring never works

C. Continue unchanged, because the target of 8 students was met and passed

D. Demand is there, but travel time makes the pay too low; change the setup

Set 17: Founder case: Zappos tests before buying stock

Outcome ENT.CASE.03: Apply a documented test (selling before holding inventory) to a new product idea, and see its limits

Module: Foundation 3: Testing demand

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Documented history: Zappos founder Nick Swinmurn tested whether people would buy shoes online before holding any inventory. He photographed shoes at local stores and posted them online; when someone ordered a pair, he bought it from the store at full price and shipped it. Lesson drawn by this course (an interpretation): you can test demand before investing in stock, even if each early sale earns little or loses money, because the goal of the test is to learn. One success story does not guarantee the same result for another business.

According to the passage, how did Swinmurn fill early orders?

A. He had a factory make each pair to order.
B. He shipped shoes from a large warehouse he owned.
C. He asked customers to pick up shoes at his home.
D. He bought the shoes from local stores and shipped them.

A founder ran the test, lost money on every sale, and kept going for two years without changing costs. What went wrong?

A. The test turned into a long-term loss without a plan to fix costs.
B. The test should have lasted five years.
C. Tests should never lose any money.
D. Nothing went wrong, because losses are part of every business forever.

REFERENCE LABEL: NOT PART OF THE QUESTION ID S17-F2-Q4
Entrepreneurship, Set 17: Founder case: Zappos tests before buying stock · FORWARD 2: HANDLE THE COMPLICATIONS · Q4/5 · Outcome ENT.CASE.03 (local)

Learn
Documented history: Zappos founder Nick Swinmurn tested whether people would buy shoes online before holding any inventory. He photographed shoes at local stores and posted them online; when someone ordered a pair, he bought it from the store at full price and shipped it. Lesson drawn by this course (an interpretation): you can test demand before investing in stock, even if each early sale earns little or loses money, because the goal of the test is to learn. One success story does not guarantee the same result for another business.

Which is the most accurate statement about using a famous founder's tactic?

A. The tactic guarantees the same success for any founder who copies it.
B. The tactic may help, but your product, costs and customers must be checked.
C. Only shoe sellers may use it.
D. The tactic never works for anyone else.

Set 18: Founder case: Dropbox shows a demo first

Outcome ENT.CASE.04: Apply a documented test (a demo with a sign-up list) and tell sign-ups from paying customers

Module: Foundation 3: Testing demand

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Documented history: before Dropbox was ready for the public, cofounder Drew Houston posted a short demo video showing how the file-syncing product would work, with a way to join a waiting list for the beta (early test) version. After the video was shared online, the waiting list grew sharply. Accounts differ on the exact numbers, so none are used here. Lesson drawn by this course (an interpretation): a clear demonstration can test interest before a product is finished, but sign-ups are interest, not payment. One success story does not guarantee the same result.

According to the passage, what did Houston share before the product was public?

A. A finished product sold in stores
B. A short demo video
C. A printed catalog of features
D. A list of investors

REFERENCE LABEL: NOT PART OF THE QUESTION ID S18-M-Q1

Learn
A sign-up list measures interest: people giving their email to hear more. A payment measures commitment: people giving money. Both are useful, but they are different. Many people sign up for things they never buy. If a waiting list is large, the next step is to check how many will pay, for example with a paid early-access offer.

A waiting-list sign-up measures what?

A. Payment
B. Profit
C. Refunds
D. Interest

Entrepreneurship, Set 19: Business name, legal entity and brand · FORWARD 1: APPLY IT · Q3/5 · Outcome ENT.LEGAL.01 (local)

Learn
Three different things are easy to mix up. The LEGAL ENTITY is the business as the law sees it, such as a sole proprietorship or an LLC (limited liability company), with its official name on state records if it was registered. The BUSINESS NAME customers see may be different, such as a trade name. The BRAND is how customers recognize and feel about the business: its logo, colors, voice and reputation. Example: "Rivera Services LLC" (entity) might operate as "Sparkle Clean" (name customers see) with a blue bubble logo (brand).

An LLC wants customers to see a different name from its legal name. What should the owner check?

A. Whether the state or county requires registering that trade name
B. Whether the logo is pretty enough
C. Whether the bank account is open
D. Whether longtime customers liked the old name better than the new one

Set 20: Name and domain checks are not trademark rights

Outcome ENT.LEGAL.02: Explain that a free domain or state name approval does not grant trademark rights, and what to check

Module: Foundation 4: Names and legal structure

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Checking a name is not the same as owning it. A domain name you can buy, a social media handle that is free, or a state's approval of an LLC name only shows that THAT specific spot was available. It does not give trademark rights, and it does not mean the name is safe to use. Another business may already use the same or a similar name for similar goods or services, and could object. Before investing in a name, also search for businesses using it and consider a trademark search (US: the USPTO database). Rules: US, check current guidance.

Nia bought the domain "glowpaws.com." What does this show?

A. That domain was available to buy.
B. No other business anywhere may use the name "Glow Paws."
C. The state has approved "Glow Paws" as her legal entity.
D. She owns the trademark "Glow Paws" everywhere in the country.

Learn
In a sole proprietorship, there is no wall between you and the business. Picture one wallet: business money and debts are legally yours. If the business owes a supplier, you owe the supplier. A general partnership is like several people sharing that same wallet: each can be on the hook for what the business owes. Forming an LLC or corporation is how some owners try to build a wall, but that is a separate step with its own limits.

In a sole proprietorship, whose debt is the business's debt?

A. The bank's
B. Only the customers'
C. The owner's
D. No one's

Set 22: LLCs and corporations

Outcome ENT.LEGAL.04: Describe LLCs and corporations at a basic level, including what limited liability does and does not do

Module: Foundation 4: Names and legal structure

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A LIMITED LIABILITY COMPANY (LLC) is a business entity formed by filing with a state. Its main feature is limited liability: generally, business debts and lawsuits are the company's, not the owners' personal ones. A CORPORATION is also formed with the state; it is owned by shareholders and run with more formal rules. Both can help separate personal and business risk, but neither is total immunity: owners can still be personally responsible for their own wrongful acts, for personal guarantees they sign, or if they mix personal and business money. Source: SBA; state law varies.

How is an LLC created?

A. By buying a domain name with "LLC" in it
B. Automatically when a business makes its first sale
C. By opening a business bank account
D. By filing with a state

REFERENCE LABEL: NOT PART OF THE QUESTION ID S22-M-Q1

A LIMITED LIABILITY COMPANY (LLC) is a business entity formed by filing with a state. Its main feature is limited liability: generally, business debts and lawsuits are the company's, not the owners' personal ones. A CORPORATION is also formed with the state; it is owned by shareholders and run with more formal rules. Both can help separate personal and business risk, but neither is total immunity: owners can still be personally responsible for their own wrongful acts, for personal guarantees they sign, or if they mix personal and business money. Source: SBA; state law varies.

Which statement is accurate?

A. An LLC is required for every business.
B. An LLC means its owners can safely ignore the contracts they sign.
C. An LLC replaces the need for insurance.
D. An LLC can help, but it works best with separate money and careful signing.

Set 23: Legal structure versus tax treatment

Outcome ENT.LEGAL.05: Separate an entity's legal form from how it is taxed

Module: Foundation 4: Names and legal structure

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A business's LEGAL FORM (sole proprietorship, partnership, LLC, corporation) is set by state law. Its TAX TREATMENT is how the IRS taxes it, which is a separate question. An LLC is a good example. By default, for federal income tax, a single-owner LLC is usually taxed with its owner (the IRS calls it "disregarded"), and a multi-owner LLC is usually taxed as a partnership. An LLC can choose (elect) to be taxed as a corporation. So "LLC" tells you the legal form, not automatically how it is taxed. Source: IRS; check current rules.

Who sets a business's legal form?

A. The IRS, by assigning it a tax form
B. State law, through the entity's formation
C. Customers, by how they pay
D. The bank, when it opens an account

Forming an LLC, at a basic level: (1) choose a name that the state will accept; (2) name a registered agent, a person or company with a physical address in the state who accepts official legal papers for the business during business hours; (3) file formation papers (often called articles of organization) with the state and pay the fee; (4) write an operating agreement; (5) then handle tax IDs, licenses and a bank account. Many states do not accept a PO Box for the registered agent. Steps and fees vary by state; check the state's official business filing site.

A state charges a 125-dollar filing fee and a registered agent service costs 100 dollars a year. What is the first-year cost of these two items?

A. 100 dollars

B. 25 dollars

C. 225 dollars

D. 125 dollars

An operating agreement is a written document among an LLC's owners (members) that sets the rules for running the business. It usually covers: who owns what percentage; who makes which decisions; how profits and losses are shared; what happens if an owner wants to leave, becomes unable to work, or dies; how new owners can join; and how disagreements are settled. Even a one-owner LLC can benefit from one. Some states require it. Writing it while everyone gets along prevents painful arguments later.

Which topic belongs in an operating agreement?

A. What happens if an owner wants to leave
B. The menu for the office holiday party
C. The color scheme for the company website
D. Which social media app to post on first

A DBA is like a name tag. If Robert wears a tag saying "Coach Bob," he is still Robert. The tag tells people what to call him at work; it does not make him a different person or give him special protection. A business with a DBA is still the same business, with the same owner, the same responsibilities and the same legal form. It simply uses another name with customers.

Does a business with a DBA change its legal form?

A. Yes, always
B. Only for LLCs
C. No
D. Only on weekends

A DBA ("doing business as"), also called a trade name, assumed name or fictitious name, lets a business operate under a name different from its legal name. A sole proprietor named Maria Lopez who sells as "Sunny Bakes" may need to register that name; so may an LLC operating under a different name. Where it is filed (state, county or city) depends on the location. A DBA does NOT create a new entity, does NOT give liability protection, and does NOT give trademark rights. Check local rules.

Lee, a sole proprietor, opens a bank account for "Lee's Lawns." The bank asks for a DBA certificate. Why?

A. The business name differs from Lee's legal name

B. Because banks issue DBAs

C. Because a DBA replaces the owner's driver's license

D. Because it creates an LLC

Limited liability has gaps. A PERSONAL GUARANTEE is a promise you sign to pay a business debt yourself if the business cannot. Lenders, landlords and some suppliers often ask new business owners for one, because the business has little history. If you sign it, your personal savings and other assets can be used to pay that debt, even if you have an LLC. Personal guarantees can be hidden in long forms. Read before signing, ask what you are guaranteeing, and consider whether the amount is one you could pay personally.

What is a personal guarantee?

A. A promise to pay a business debt yourself if the business cannot
B. A promise by the bank to lend you more money later
C. A guarantee that the business will make a profit this year
D. A warranty you give customers on a product

Many activities need permission from a government before you start. A BUSINESS LICENSE is general permission to operate in a city or county. A PERMIT covers a specific activity, such as selling food, putting up a sign, or doing construction. ZONING rules say what activities are allowed at a location, including homes; some neighborhoods limit customer visits, signs, parking or noise. Some jobs, such as hair care or electrical work, need a professional license. Rules depend on the activity and the place: city, county, state and sometimes federal. Rental leases and homeowner associations can add limits.

Lucy wants to sell homemade baked goods from her kitchen. What should she check?

A. Local and state rules for selling food made at home
B. Only whether her friends and neighbors like her cookies
C. Only how to post on social media
D. Only the price of flour at the store

Many activities need permission from a government before you start. A BUSINESS LICENSE is general permission to operate in a city or county. A PERMIT covers a specific activity, such as selling food, putting up a sign, or doing construction. ZONING rules say what activities are allowed at a location, including homes; some neighborhoods limit customer visits, signs, parking or noise. Some jobs, such as hair care or electrical work, need a professional license. Rules depend on the activity and the place: city, county, state and sometimes federal. Rental leases and homeowner associations can add limits.

Which job most likely needs a professional license?

A. Dog photography at a park
B. Writing a personal blog for fun
C. Electrical wiring in customers' homes
D. Selling greeting cards online

Think of permission slips at school: one lets you go on a field trip, another lets you play a sport. A business may need several kinds: a general business license (permission to operate), a permit for a specific activity (like serving food), and approval that the location allows the activity (zoning). Some people also need a personal professional license, like a driver's license for a job. Each comes from the group in charge of that rule.

A general business license is like which permission slip?

A. Permission to drive a car
B. Permission to operate at all
C. Permission to skip class
D. Permission to change a logo

Set 29: When a professional helps

Outcome ENT.LEGAL.11: Decide when a question needs an attorney, accountant or other professional, and prepare for the meeting

Module: Foundation 4: Names and legal structure

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Some questions are worth paying an expert to answer. An ATTORNEY helps with legal questions: contracts, entity choice, disputes, leases and trademarks. An ACCOUNTANT or tax professional helps with taxes, bookkeeping set-up, tax elections and estimated payments. An INSURANCE AGENT helps match coverage to risks. Get help when the stakes are high, the rules are complex, or a mistake would be hard to undo. Prepare: write your questions, bring documents, and ask about fees before you start.

Which professional best fits a question about a confusing lease clause?

A. A graphic designer who made the logo
B. A social media manager
C. An attorney
D. A delivery driver

Learn
Some questions are worth paying an expert to answer. An ATTORNEY helps with legal questions: contracts, entity choice, disputes, leases and trademarks. An ACCOUNTANT or tax professional helps with taxes, bookkeeping set-up, tax elections and estimated payments. An INSURANCE AGENT helps match coverage to risks. Get help when the stakes are high, the rules are complex, or a mistake would be hard to undo. Prepare: write your questions, bring documents, and ask about fees before you start.

A founder uses an AI tool to draft a contract. What is the sensible next step for an important deal?

A. Assume AI drafts are legally verified
B. Sign it as written
C. Have a qualified professional review it
D. Delete all contracts

Set 30: What an EIN is

Outcome ENT.ID.01: Explain what an Employer Identification Number (EIN) is for and when to check whether one is needed

Module: Foundation 5: EIN and business banking

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
An EIN (Employer Identification Number) is a nine-digit number the IRS (the federal tax agency) gives a business to identify it for federal taxes, much like a Social Security number identifies a person. Businesses that hire employees, most partnerships and corporations, and many LLCs need one. Banks often ask for it when opening a business account. Even a sole proprietor without employees may choose to get one so she can give clients the EIN instead of her Social Security number. The IRS says an EIN is free: you never have to pay a fee for one.

What is an EIN?

A. A registered trademark for a business name
B. A credit score assigned to new businesses
C. A state license that lets a business sell food
D. A federal tax ID number for a business

REFERENCE LABEL: NOT PART OF THE QUESTION ID S30-M-Q1

Learn
People have Social Security numbers so the government can match their tax records. A business can have its own ID number too: the EIN. When the business files taxes, pays employees, or opens a bank account, the EIN tells everyone which business it is. The number does not make the business legal or protect the owner; it is simply an ID, like a student ID number at school.

An EIN is most like which of these?

A. A shop's front sign
B. A house key
C. A bank loan
D. A student ID number

Learn
The IRS lets businesses apply for an EIN directly, including online, at no charge. The online application asks for a "responsible party": an individual who controls the business, with a Social Security number (SSN) or ITIN. It is for businesses located in the US or its territories, and it must be completed in one session. The IRS advises forming an LLC, partnership or corporation with the state first; applying before the entity exists may delay things. Be careful with look-alike websites that charge fees.

Where should an owner apply for an EIN to avoid unnecessary fees?

A. Through the city hall front desk
B. Through any website that appears first in an ad
C. Directly with the IRS
D. Through the business's bank teller

Which information should be ready before starting the online application?

A. The logo file, brand colors and a sample of the website
B. Next year's marketing plan
C. The business type and responsible party's SSN or ITIN
D. A list of competitors' prices

REFERENCE LABEL: NOT PART OF THE QUESTION ID S31-F1-Q4
Entrepreneurship, Set 31: Applying from the official source · FORWARD 1: APPLY IT · Q4/5 · Outcome ENT.ID.02 (local)

Learn
The IRS lets businesses apply for an EIN directly, including online, at no charge. The online application asks for a "responsible party": an individual who controls the business, with a Social Security number (SSN) or ITIN. It is for businesses located in the US or its territories, and it must be completed in one session. The IRS advises forming an LLC, partnership or corporation with the state first; applying before the entity exists may delay things. Be careful with look-alike websites that charge fees.

Nora saved 199 dollars by applying directly with the IRS instead of a paid site. If she had also avoided a 49-dollar "rush" add-on, how much did she save in total?

A. 199 dollars

B. 49 dollars

C. 150 dollars

D. 248 dollars

Set 32: EIN, state tax ID and registration

Outcome ENT.ID.03: Tell an EIN, a state tax account and a business registration apart, and their usual order

Module: Foundation 5: EIN and business banking

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Different numbers and filings do different jobs. The EIN is the FEDERAL tax ID from the IRS. A STATE tax ID or account may be needed for state taxes, such as collecting sales tax or paying state payroll taxes; it comes from the state's tax agency. BUSINESS REGISTRATION (forming an LLC, or filing a DBA) records the business or its name with the state or local government. A LICENSE gives permission to operate. Having one does not replace the others. The SBA lists getting federal and state tax IDs as separate launch steps.

Which ID is the federal tax ID?

A. The state sales tax permit
B. The EIN
C. The DBA certificate number
D. The city business license number

Set 33: A separate business bank account

Outcome ENT.BANK.01: Explain why business money belongs in a separate account

Module: Foundation 5: EIN and business banking

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A separate business bank account keeps business money apart from personal money. All business income goes in and all business expenses come out of it. This makes bookkeeping and taxes easier, shows clearly what the business earns, and helps support the separation between an LLC or corporation and its owner. Mixing personal and business money in one account is called COMMINGLING. It makes records confusing and can weaken liability protection. The SBA lists opening a business bank account as a launch step.

What is commingling?

A. Keeping receipts in a folder by month
B. Paying taxes on time each quarter
C. Mixing personal and business money
D. Opening several savings accounts at once

Entrepreneurship, Set 33: A separate business bank account · BACKWARD 1 (concept simplification) · Q5/5 · Outcome ENT.BANK.01 (local)

Learn
A separate business bank account keeps business money apart from personal money. All business income goes in and all business expenses come out of it. This makes bookkeeping and taxes easier, shows clearly what the business earns, and helps support the separation between an LLC or corporation and its owner. Mixing personal and business money in one account is called COMMINGLING. It makes records confusing and can weaken liability protection. The SBA lists opening a business bank account as a launch step.

Gia's client pays 600 dollars for a design project. Where should it be deposited?

A. The business account
B. Her personal savings for safekeeping
C. Her child's school account
D. Split randomly between accounts

Set 34: Opening the account: documents, fees, signers

Outcome ENT.BANK.02: Identify documents a bank may ask for, account fees and who may sign

Module: Foundation 5: EIN and business banking

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Banks set their own rules, but opening a business account usually requires: the business's formation papers (for an LLC or corporation), the EIN (or an SSN for some sole proprietors), a DBA certificate if using a trade name, and personal ID for each signer. A SIGNER is a person allowed to use the account. Compare accounts: monthly fees, minimum balance needed to avoid fees, transaction limits, cash deposit fees and online tools. Read the fee schedule before choosing; a "free" account may have conditions.

What is a signer on a bank account?

A. The bank employee who opened the account
B. A customer who pays the business by check
C. A person allowed to use the account
D. The state office that approved the LLC

Think of money moving through doors. A payment processor is an IN door: customers' card payments come through it into the business account, minus a fee. A debit card is an OUT door: money leaves the account immediately. A credit card is a borrowed OUT door: you spend now and must pay the card company back later, sometimes with interest.

A payment processor is which door?

A. An IN door
B. A locked door
C. No door
D. An OUT door

REFERENCE LABEL: NOT PART OF THE QUESTION ID S35-B1-Q1
Entrepreneurship, Set 35: Debit, credit and payment processing · BACKWARD 1 (concept simplification) · Q1/5 · Outcome ENT.BANK.03 (local)

Learn
Think of money moving through doors. A payment processor is an IN door: customers' card payments come through it into the business account, minus a fee. A debit card is an OUT door: money leaves the account immediately. A credit card is a borrowed OUT door: you spend now and must pay the card company back later, sometimes with interest.

A debit card is which door?

A. A locked door
B. An IN door
C. An OUT door
D. A borrowed door

Learn
A business DEBIT card takes money straight from the business account. A business CREDIT card borrows money that must be repaid; unpaid balances usually charge interest. A PAYMENT PROCESSOR is a company that lets the business accept card or app payments from customers; it charges a fee, often a percentage plus a small fixed amount per sale, and deposits the rest into the business account, usually a day or more later. Know which tool moves money in, and which moves money out.

A processor charges 2.9 percent plus 0.30 dollars per sale. A sale is 50 dollars. What is the fee?

A. 1.75 dollars

B. 1.45 dollars

C. 3.20 dollars

D. 0.30 dollars

Set 36: Moving money between owner and business

Outcome ENT.BANK.04: Record owner contributions and owner withdrawals separately from sales and expenses

Module: Foundation 5: EIN and business banking

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Owners move money in and out of a business in a few ways. An OWNER CONTRIBUTION is money the owner puts in. An OWNER'S DRAW (also called a distribution) is money the owner takes out from profits; for sole proprietors and most LLCs, a draw is not a wage and is not a business expense. A LOAN from the owner to the business should be written down with how it will be repaid. In every case, move the money by transfer and record what it is, so the books show the truth.

Money an owner puts into the business is called what?

A. An owner's draw from profits
B. A refund to a customer
C. A customer payment for a product
D. An owner contribution

Set 37: Reconciling transactions

Outcome ENT.BANK.05: Match business records against the bank statement and explain differences

Module: Foundation 5: EIN and business banking

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
RECONCILING means comparing your own records with the bank statement to make sure they match. Each month, check every deposit and withdrawal. Differences usually come from: transactions the bank has not processed yet (such as a check that has not cleared), bank fees you did not record, mistakes in your records, or charges you do not recognize. Unknown charges may be errors or fraud and should be reported to the bank quickly. Reconciling catches problems while they are still small.

What does reconciling mean?

A. Opening a second account at another bank
B. Comparing your records with the bank statement
C. Paying all bills on the same day
D. Asking the bank for a loan

REFERENCE LABEL: NOT PART OF THE QUESTION ID S37-M-Q1

Differences usually come from: transactions the bank has not processed yet (such as a check that has not cleared), bank fees you did not record, mistakes in your records, or charges you do not recognize. Unknown charges may be errors or fraud and should be reported to the bank quickly. Reconciling catches problems while they are still small.

Which is a common reason records and the bank differ?

A. A customer posted a review
B. The owner changed the logo colors
C. A bank fee that was not recorded
D. The website was redesigned

After shopping, you might compare the receipt with what is in the bag. If the receipt shows two milks but you have one, something is wrong. Reconciling is the same check for a business: your records are one list, the bank statement is the other, and you look for any item that appears on only one of them. Then you find out why.

In the shopping example, what is compared?

A. The receipt and the bag
B. Two stores
C. Coupons and ads
D. Prices and the weather

Set 38: Three kinds of business address

Outcome ENT.MAIL.01: Tell a mailing address, a physical business address and a registered-agent address apart

Module: Foundation 6: Addresses and contact details

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A business can have different addresses for different jobs. The REGISTERED AGENT ADDRESS is where official legal papers are delivered; states usually require a physical street address in the state. The MAILING ADDRESS is where ordinary letters and bills go; it may be a PO Box in many cases. The PHYSICAL (or principal) ADDRESS is where the business actually operates. Some addresses appear in public state records, so a home-based owner may prefer not to use her home for every one. Each state sets its own rules; Washington, for example, does not allow a PO Box as the registered agent address.

Which address receives official legal papers?

A. The mailing address used for catalogs and bills
B. The address of the owner's favorite supplier
C. The address printed on the shipping boxes
D. The registered agent address

A business can have different addresses for different jobs. The REGISTERED AGENT ADDRESS is where official legal papers are delivered; states usually require a physical street address in the state. The MAILING ADDRESS is where ordinary letters and bills go; it may be a PO Box in many cases. The PHYSICAL (or principal) ADDRESS is where the business actually operates. Some addresses appear in public state records, so a home-based owner may prefer not to use her home for every one. Each state sets its own rules; Washington, for example, does not allow a PO Box as the registered agent address.

A registered agent service forwards legal papers by email. What should the owner do when one arrives?

A. Ignore it until year end
B. Delete it if the subject line looks boring or routine
C. Forward it to customers
D. Read it promptly, because legal papers can have deadlines

A PO BOX is a locked mailbox rented at a Post Office. Some carriers (like private package companies) need a street address. At participating Post Offices, the "Street Addressing" option lets a box holder use the Post Office's street address with the box number, so those carriers can deliver; availability varies and the customer signs an agreement. A PRIVATE MAILBOX is rented from a private store called a Commercial Mail Receiving Agency (CMRA). To receive mail there, the customer completes USPS Form 1583 with identity documents; requirements have changed over time, so check the current form.

Where is a PO Box rented?

A. At a Post Office
B. At the state business filing office
C. At any coffee shop that sells stamps
D. At a bank branch near the business

Some PACKAGE CARRIERS cannot deliver to a plain PO Box; Street Addressing at participating Post Offices can help. BANKS and some licensing offices may ask for a physical address. Before filing any form, read what kind of address it asks for.

A supplier ships by a private carrier that cannot deliver to plain PO Boxes. The owner's Post Office offers Street Addressing. What should she give the supplier?

A. The Post Office street address with her box number
B. A neighbor's street address, without asking first
C. Her plain PO Box number only
D. The registered agent's address

REFERENCE LABEL: NOT PART OF THE QUESTION ID S40-F1-Q2
Entrepreneurship, Set 40: Which address each organization accepts · FORWARD 1: APPLY IT · Q2/5 · Outcome ENT.MAIL.03 (local)

Learn
Different organizations accept different addresses. The STATE often requires a physical in-state street address for the registered agent; Washington, for example, does not accept PO Boxes or private mailboxes there, though a PO Box may be listed as a separate mailing address. Some PACKAGE CARRIERS cannot deliver to a plain PO Box; Street Addressing at participating Post Offices can help. BANKS and some licensing offices may ask for a physical address. Before filing any form, read what kind of address it asks for.

Of 5 forms, 2 require a physical street address and the rest accept a PO Box. How many accept a PO Box?

A. 7, the two numbers added

B. 2, the forms needing a street address

C. 5, every one of the forms

D. 3

Set 41: Mailbox practicalities

Outcome ENT.MAIL.04: Plan pickup access, forwarding or scanning, renewals and important notices for a business mailbox

Module: Foundation 6: Addresses and contact details

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Practical choices matter once you have a mailbox. PO Boxes come in sizes and are rented for set periods, such as 3, 6 or 12 months; fees vary by location and size. Plan how often you will check it: important letters, such as tax notices or bills, can have deadlines. Decide who may pick up mail, keep keys safe, and ask how large packages are handled. When moving, update your address with banks, customers and agencies; forwarding may help for a while but does not replace updating records. Renew before the rental period ends.

Why plan how often to check a business mailbox?

A. Boxes must be emptied every hour by law
B. Checking often lowers the rental fee
C. Important letters can have deadlines
D. Mail disappears after exactly one day

REFERENCE LABEL: NOT PART OF THE QUESTION ID S41-M-Q1

A clean shop window and a bell that works tell customers someone is ready to help. Email, phone and voicemail are a modern shop's window and bell. A business email on the shop's own web name looks tidy; a separate phone keeps business calls from mixing with family calls; and a voicemail greeting says who you are and when you will call back.

Why keep a separate business phone?

A. To avoid hearing from any customers at all
B. To keep business calls apart from family calls
C. To raise prices
D. To get more ads

Customers judge a business by how easy it is to reach. A BUSINESS EMAIL that uses the company's own web domain (like hello@yourshop.example) looks more established than a free personal address. A separate business phone number (a second line or a calling app) keeps personal and business calls apart and protects privacy. Record a short voicemail greeting with the business name and when callers can expect a reply. Then answer within the time you promise; a clear, kept promise builds trust.

Rita's flyers list "rita.party.girl@freemail.example." She owns ritasbakes.example. What is the best change?

A. Remove all contact details from the flyer
B. Use an address like orders@ritasbakes.example
C. Keep the personal address on every flyer
D. List her home address instead of email

Set 43: One-time and recurring costs

Outcome ENT.COST.01: Classify costs as one-time or recurring

Module: Foundation 7: Costs, pricing and cash

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Business costs come in two timing types. A ONE-TIME (startup) cost is paid once to get going: equipment, a first batch of supplies, a state filing fee, or a website design. A RECURRING cost repeats on a schedule: rent, software subscriptions, insurance, phone service, or a yearly license renewal. To compare them, convert recurring costs to the same period, such as per month or per year. In this course, all prices in questions are example assumptions, not real market prices.

Which is a one-time cost?

A. Renewing the business license every year
B. Buying a used oven to start a bakery
C. Paying for a website hosting plan each month
D. Paying the monthly rent for the bakery space

Set 44: Fixed and variable costs

Outcome ENT.COST.02: Classify costs as fixed or variable and use them in a small total

Module: Foundation 7: Costs, pricing and cash

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A FIXED cost stays about the same no matter how much you sell in a period: rent, insurance, a software plan. A VARIABLE cost goes up as you sell more: ingredients, packaging, shipping, or payment fees on each sale. Example: a candle maker pays 500 dollars of rent a month (fixed) and 4 dollars of wax and jar for each candle (variable). Making 100 candles costs 500 + 4 x 100 = 900 dollars. Knowing which is which helps you plan prices and see what happens when sales change.

Which is a variable cost for a bakery?

A. The monthly accounting software plan
B. Flour used for each batch of bread
C. Monthly rent for the bakery building
D. Yearly insurance for the shop

REFERENCE LABEL: NOT PART OF THE QUESTION ID S44-M-Q1

A FIXED cost stays about the same no matter how much you sell in a period: rent, insurance, a software plan. A VARIABLE cost goes up as you sell more: ingredients, packaging, shipping, or payment fees on each sale. Example: a candle maker pays 500 dollars of rent a month (fixed) and 4 dollars of wax and jar for each candle (variable). Making 100 candles costs 500 + 4 x 100 = 900 dollars. Knowing which is which helps you plan prices and see what happens when sales change.

Which is a fixed cost for an online T-shirt shop?

A. Payment fees taken from each sale
B. Blank shirts bought for each order
C. Shipping paid on each package
D. A monthly website plan

Learn
Total cost often follows one pattern: total = fixed + (cost per item x number of items). Do the multiplication first, then add. Example: fixed 200, cost per item 3, items 40: 3 x 40 = 120, then 200 + 120 = 320. A common mistake is adding first: (200 + 3) x 40 is wrong. Check that the total is never less than the fixed cost.

Fixed 100, cost per item 2, items 30. What is the total?

A. 60
B. 3,060
C. 160
D. 132

Set 45: A realistic startup budget

Outcome ENT.COST.03: Build a small startup budget with a buffer and no missing items

Module: Foundation 7: Costs, pricing and cash

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A STARTUP BUDGET lists what you expect to spend before and during the first months. List one-time costs (equipment, filing fees, first inventory) and recurring costs for several months, because sales often start slowly. Add a CONTINGENCY: an extra amount, often a percentage, for surprises such as a repair or a price increase. Write down your ASSUMPTIONS (for example, "rent stays 400 dollars a month") so you can check them later. Compare the total with the money available.

What is a contingency in a budget?

A. Money owed to customers for refunds
B. Extra money set aside for surprises
C. A tax paid to the state each month
D. The owner's profit for the first year

List one-time costs (equipment, filing fees, first inventory) and recurring costs for several months, because sales often start slowly. Add a CONTINGENCY: an extra amount, often a percentage, for surprises such as a repair or a price increase. Write down your ASSUMPTIONS (for example, "rent stays 400 dollars a month") so you can check them later. Compare the total with the money available.

Which budget is most realistic for a new café?

A. One with no rent listed, because the first rent is due later
B. One listing only the espresso machine
C. One with equipment, several months of costs and a buffer
D. One assuming full sales on day one

Set 46: Price and cost per item

Outcome ENT.PRICE.01: Find cost per item and profit per item from a stated price

Module: Foundation 7: Costs, pricing and cash

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
COST PER ITEM (unit cost) is what it costs you to make or buy one item. If a batch of 40 cookies uses 20 dollars of ingredients and 4 dollars of bags, the cost per cookie is (20 + 4) / 40 = 0.60 dollars. PRICE is what the customer pays. The difference, price minus cost per item, is what each sale contributes toward fixed costs and profit. A price below the cost per item loses money on every sale. Include everything the item uses, such as packaging and labels, not just the main material.

A batch of 50 bracelets uses 75 dollars of beads and string. What is the cost per bracelet?

A. 3.75 dollars
B. 75.00 dollars
C. 1.50 dollars
D. 0.67 dollars

A lemonade stand sells 30 cups at 1 dollar: revenue is 30 dollars. Lemons, sugar and cups cost 18 dollars: profit is 30 - 18 = 12 dollars. But if a neighbor bought 5 cups and promised to pay tomorrow, the cash box has only 25 dollars from sales today. Revenue is what you sold, profit is what is left after costs, and cash is what is in the box.

Why is there only 25 dollars of sales cash?

A. Profit for the day was negative
B. Lemons were free
C. A neighbor will pay tomorrow
D. Cups were stolen

Three words get mixed up. REVENUE (sales) is all the money earned from customers before costs. PROFIT is revenue minus all expenses for the same period. CASH is the money actually in the bank right now. They can differ: a business can have revenue but no profit if costs are high; it can show a profit but little cash if customers have not paid yet or if money went into inventory. Watching all three tells the real story.

A photographer billed clients 5,000 dollars in May. Expenses were 2,200 dollars. Clients paid 3,500 dollars so far. What is the May profit?

A. 1,300 dollars
B. 3,500 dollars
C. 2,800 dollars
D. 5,000 dollars

Set 48: Markup and margin

Outcome ENT.PRICE.02: Compute markup and margin and explain why they differ

Module: Foundation 7: Costs, pricing and cash

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
MARKUP and MARGIN both describe the gap between cost and price, but they use different bases. MARKUP is the gap as a percent of COST: (price - cost) / cost. MARGIN is the gap as a percent of PRICE: (price - cost) / price. Example: cost 6 dollars, price 10 dollars. The gap is 4. Markup = 4 / 6, about 67 percent. Margin = 4 / 10 = 40 percent. Markup is always bigger than margin for the same item. Mixing them up can lead to prices that are too low.

Cost 5 dollars, price 8 dollars. What is the markup?

A. 3 percent
B. 60 percent
C. 37.5 percent
D. 160 percent

A. Prices set from the wrong term can be too low

B. It never matters which word is used

C. Margin is only for taxes

D. Markup and margin are legally identical

REFERENCE LABEL: NOT PART OF THE QUESTION ID S48-F2-Q3
Entrepreneurship, Set 48: Markup and margin · FORWARD 2: HANDLE THE COMPLICATIONS · Q3/5 · Outcome ENT.PRICE.02 (local)

Learn
MARKUP and MARGIN both describe the gap between cost and price, but they use different bases. MARKUP is the gap as a percent of COST: (price - cost) / cost. MARGIN is the gap as a percent of PRICE: (price - cost) / price. Example: cost 6 dollars, price 10 dollars. The gap is 4. Markup = 4 / 6, about 67 percent. Margin = 4 / 10 = 40 percent. Markup is always bigger than margin for the same item. Mixing them up can lead to prices that are too low.

Which mistake leads to a lower price than intended?

A. Using a markup percent when a margin percent was intended
B. Using a margin percent when a margin percent was intended
C. Writing down the cost carefully
D. Including packaging in cost

REFERENCE LABEL: NOT PART OF THE QUESTION ID S48-F2-Q4

Learn
Many fees follow "rate x amount + fixed." Change the percent to a decimal, multiply by the amount, then add the fixed part. Example: 3 percent of 50 plus 0.25: 0.03 x 50 = 1.50, then 1.50 + 0.25 = 1.75. A common mistake is forgetting the fixed part or using 3 instead of 0.03. Check: the fee should be much smaller than the sale.

What is 0.04 x 25 + 0.50?

A. 1.00
B. 0.54
C. 1.50
D. 100.50

Learn
When customers pay by card or app, the payment processor keeps a fee. A common structure is a percentage of the sale plus a fixed amount per transaction, for example (an assumption, not a real quote) 2.9 percent + 0.30 dollars. On a 40-dollar sale that is 0.029 x 40 + 0.30 = 1.46 dollars, so the business receives 38.54 dollars. The fixed part hurts small sales most: on a 3-dollar sale, 0.30 dollars alone is 10 percent. Include fees in cost per sale when setting prices.

A seller's cost per item is 12 dollars and she charges 20 dollars. Fee is 2.9 percent + 0.30 dollars. What does each sale contribute after the fee?

A. 7.42 dollars

B. 8.00 dollars

C. 7.70 dollars

D. 7.12 dollars

Outcome ENT.PRICE.05: Find the effect of refunds and discounts on revenue and profit

Module: Foundation 7: Costs, pricing and cash

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Discounts and refunds reduce what a sale brings in, often more than people expect. A 20 percent discount on a 25-dollar item with a 15-dollar cost cuts the contribution from 10 dollars to 5 dollars: half the money from that sale. A REFUND gives money back; the item may come back damaged or not at all, and some processors do not return their fee. Write a clear refund policy (time limit, condition of returns, who pays shipping) and post it before customers buy.

A 25-dollar item costs 15 dollars. With a 20 percent discount, what is the new price?

A. 24.80 dollars
B. 5 dollars
C. 30 dollars
D. 20 dollars

An owner's time is limited, so it has a cost. CAPACITY is the most work the business can do in a period. If an owner can work 30 hours a week on paid tasks, that is her capacity. To find an effective HOURLY RATE, divide profit from a job by the total hours it takes, including travel, emails, invoices and setup, not just the visible work. A price that looks high can become a low hourly rate. When capacity is full, more customers cannot be served without raising prices, getting help, or working more.

What is capacity?

A. The most work the business can do in a period
B. The size of the logo file
C. The number of followers on social media
D. The amount of money in savings

A bus has a fixed number of seats. Once they are full, no more people can ride that trip, no matter how many wait. An owner's week is like the bus: it has a fixed number of working hours. Each job takes some seats, including the "hidden" seats for travel and paperwork. When the hours are full, the choices are a bigger bus (help), a pricier ticket (higher prices), or more trips (more hours).

A full bus is like what?

A. A big savings account
B. An empty calendar
C. A full work week
D. A new logo

Set 53: Reviewing and raising prices

Outcome ENT.PRICE.07: Decide when a price needs review from stated costs, demand and capacity, and communicate a change

Module: Foundation 7: Costs, pricing and cash

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Prices should be reviewed regularly, for example every 6 or 12 months, or when costs change. Signs a price may be too low: costs have risen, you are fully booked, or your hourly rate is below what you need. To raise prices well, give current customers notice, explain briefly (for example, higher material costs), and consider keeping old prices for a short time for loyal clients. Some customers may leave; check whether the remaining sales bring in more total contribution.

Which is a sign a price may be too low?

A. Customers sometimes compliment the product
B. The owner bought a new phone
C. The owner is fully booked months ahead
D. The logo was redesigned recently

Prices should be reviewed regularly, for example every 6 or 12 months, or when costs change. Signs a price may be too low: costs have risen, you are fully booked, or your hourly rate is below what you need. To raise prices well, give current customers notice, explain briefly (for example, higher material costs), and consider keeping old prices for a short time for loyal clients. Some customers may leave; check whether the remaining sales bring in more total contribution.

A competitor charges less. The owner's costs are higher because she uses better materials. What fits?

A. Ignore costs entirely
B. Explain the value and price to cover her costs
C. Match the competitor's lower price, even if she loses money
D. Use worse materials secretly

Set 54: Cash timing, unpaid invoices and deposits

Outcome ENT.CASH.02: Track when cash actually arrives and leaves, and use deposits

Module: Foundation 7: Costs, pricing and cash

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Cash often arrives later than work is done. An INVOICE is a bill sent to a customer; "Net 30" means payment is due 30 days after the invoice date. Meanwhile, the business may have to pay for materials and its own bills. A DEPOSIT is money paid up front before work starts; it reduces risk and helps buy materials. Track unpaid invoices (accounts receivable), send reminders on the due date, and set clear terms in writing, such as a late fee if allowed where you operate.

What does "Net 30" mean?

A. The business must pay 30 dollars
B. A 30 percent discount for paying early
C. The customer may pay any time in the year
D. Payment is due 30 days after the invoice date

Learn
A CASH RESERVE (emergency fund) is money the business keeps aside for slow months, repairs or late payments. A common planning approach is to save enough to cover a set number of months of essential expenses, such as 2 to 3 months; this is a planning assumption, not a rule. Build it gradually, for example by moving a percentage of each sale into a separate savings account. Use it only for real emergencies, then refill it. Without a reserve, one surprise can force expensive borrowing.

What is a cash reserve?

A. Money set aside for slow months and surprises
B. Money owed to suppliers
C. Money used for the owner's vacation
D. Money spent on advertising and promotions each month

Learn
A CASH RESERVE (emergency fund) is money the business keeps aside for slow months, repairs or late payments. A common planning approach is to save enough to cover a set number of months of essential expenses, such as 2 to 3 months; this is a planning assumption, not a rule. Build it gradually, for example by moving a percentage of each sale into a separate savings account. Use it only for real emergencies, then refill it. Without a reserve, one surprise can force expensive borrowing.

The reserve is 3,000 dollars. An oven repair costs 1,200 dollars. What remains to refill?

A. 3,000 dollars
B. 4,200 dollars
C. 1,200 dollars
D. 1,800 dollars

Set 56: Founder case: HP's first product and first big customer

Outcome ENT.CASE.05: Apply a documented early decision (a customer asking for changes and placing an order) to a new business

Module: Foundation 7: Costs, pricing and cash

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Documented history (HP's own history pages): Bill Hewlett and Dave Packard began part-time work in a garage in Palo Alto, California, with 538 dollars in working capital. Their first product was the HP 200A audio oscillator, an instrument used to test sound equipment. Walt Disney Studios asked for changes and ordered eight of the modified model, the 200B, for the film Fantasia. Lesson drawn by this course (an interpretation): start with little capital, solve a specific problem for professional users, and adapt to a serious customer's request. One success story does not guarantee the same result for another business.

According to the passage, how much working capital did they start with?

A. 538 dollars
B. No money at all
C. 5,380 dollars
D. 53,800 dollars

REFERENCE LABEL: NOT PART OF THE QUESTION ID S56-M-Q1

Set 57: Why bookkeeping and receipts matter

Outcome ENT.BOOK.01: Explain what bookkeeping is for and keep usable receipts

Module: Foundation 8: Bookkeeping and taxes

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
BOOKKEEPING is recording every money event in the business: sales, expenses, owner transfers and loans. Each record should show the date, amount, who it was with, and what it was for. A RECEIPT or invoice is the proof. Good records let you see whether you are making money, prepare taxes, answer questions from a tax agency, apply for loans, and catch mistakes or theft. Record transactions soon after they happen; trying to rebuild a year of records from memory is slow and unreliable.

What is bookkeeping?

A. Choosing which products to put on sale each week
B. Designing the shelves where the business keeps its books
C. Writing a business plan for investors once a year
D. Recording every money event in the business

REFERENCE LABEL: NOT PART OF THE QUESTION ID S57-M-Q1

BOOKKEEPING is recording every money event in the business: sales, expenses, owner transfers and loans. Each record should show the date, amount, who it was with, and what it was for. A RECEIPT or invoice is the proof. Good records let you see whether you are making money, prepare taxes, answer questions from a tax agency, apply for loans, and catch mistakes or theft. Record transactions soon after they happen; trying to rebuild a year of records from memory is slow and unreliable.

When is the best time to record a transaction?

A. Soon after it happens
B. Never, if the amount is under 100 dollars
C. Once a year, from memory, just before taxes are due
D. Only when a tax agency asks a question about it

Learn
Bookkeeping is like keeping a diary, but only about money. Each entry says when, how much, with whom, and why: "May 3, paid 42 dollars to Paper Plus for boxes." A receipt is like a photo that proves the diary entry is true. If you skip the diary for months, you will not remember what each payment was for, and nobody can check your story.

Bookkeeping is like a diary about what?

A. Weather
B. Money
C. Favorite songs
D. Sports scores

Set 58: Categorizing and a simple ledger

Outcome ENT.BOOK.02: Record transactions in a simple ledger with sensible categories

Module: Foundation 8: Bookkeeping and taxes

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A LEDGER is a list of every transaction with columns such as date, description, category, money in and money out. CATEGORIES group similar items: sales, supplies, shipping, rent, advertising, software, owner draws. Consistent categories let you total each type and spot trends, such as shipping costs rising. A spreadsheet or simple bookkeeping software works. Example running balance: start 500, sale +200 = 700, supplies -80 = 620.

What is a ledger?

A. A bank's yearly report on interest rates
B. A list of every transaction with columns
C. A promotional flyer that lists product prices
D. A legal agreement among the owners of an LLC

REFERENCE LABEL: NOT PART OF THE QUESTION ID S58-M-Q1

A LEDGER is a list of every transaction with columns such as date, description, category, money in and money out. CATEGORIES group similar items: sales, supplies, shipping, rent, advertising, software, owner draws. Consistent categories let you total each type and spot trends, such as shipping costs rising. A spreadsheet or simple bookkeeping software works. Example running balance: start 500, sale +200 = 700, supplies -80 = 620.

Which statement is accurate?

A. Any random category is fine as long as amounts are right.
B. Ledgers are needed only for businesses with employees.
C. Clear, consistent categories make records useful.
D. A ledger replaces the need for receipts.

An INVOICE is a bill YOU send to a customer; until it is paid, it is money owed TO you, called ACCOUNTS RECEIVABLE. A BILL from a supplier is money YOU owe, called ACCOUNTS PAYABLE. A good invoice shows your business name, the customer, an invoice number, the date, what was provided, the amount, the due date and how to pay. Track both lists: who owes you, and whom you owe, with due dates. Paying bills on time protects your reputation with suppliers.

Money customers owe you is called what?

A. Accounts receivable
B. Retained cash in savings
C. Owner contributions to the business
D. Accounts payable owed to suppliers

An IOU is a note that says "I owe you." In a business, IOUs go two ways. When you finish a job and send an invoice, the customer holds an IOU to you: that is a receivable. When a supplier sends you a bill, you hold an IOU to them: that is a payable. Keeping two lists, "owed to me" and "I owe," stops both kinds from being forgotten.

A customer who has not paid your invoice holds an IOU to whom?

A. To the supplier
B. To the bank
C. To you
D. To nobody

Outcome ENT.BOOK.04: Keep owner money moves out of sales and expenses in the records

Module: Foundation 8: Bookkeeping and taxes

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
In the books, owner money is kept separate from income and expenses. An OWNER CONTRIBUTION increases the owner's stake (called owner's equity) but is NOT sales revenue. An OWNER DRAW decreases owner's equity but is NOT a business expense for a sole proprietor or most LLCs. A LOAN from the owner is recorded as money the business owes back. Mislabeling these makes profit look wrong: a contribution recorded as a sale inflates profit; a draw recorded as an expense hides it.

An owner puts 1,000 dollars into the business. Is it sales revenue?

A. Yes, but only if it is spent the same day
B. No, it is a business expense instead
C. Yes, it counts as sales for that month
D. No, it is an owner contribution

REFERENCE LABEL: NOT PART OF THE QUESTION ID S60-M-Q1

In the books, owner money is kept separate from income and expenses. An OWNER CONTRIBUTION increases the owner's stake (called owner's equity) but is NOT sales revenue. An OWNER DRAW decreases owner's equity but is NOT a business expense for a sole proprietor or most LLCs. A LOAN from the owner is recorded as money the business owes back. Mislabeling these makes profit look wrong: a contribution recorded as a sale inflates profit; a draw recorded as an expense hides it.

Why does correct labeling matter for a loan application?

A. Labels change the bank's interest rate directly
B. Lenders ignore records
C. Labels are only for taxes
D. Lenders look at true profit

Set 61: Cash and accrual basics

Outcome ENT.BOOK.05: Tell cash-basis from accrual-basis recording in a simple example

Module: Foundation 8: Bookkeeping and taxes

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
There are two common ways to record when income and expenses count. CASH BASIS records income when money is received and expenses when money is paid. ACCRUAL BASIS records income when it is earned (for example, when the work is done and invoiced) and expenses when they are incurred, even if payment happens later. Example: a job finished in December but paid in January counts as December income under accrual and January income under cash. Many small businesses start on cash basis; tax rules on which method may be used vary, so ask a tax professional.

Under cash basis, when is income recorded?

A. When money is received
B. When the invoice is designed in software
C. When the customer first asks for a quote
D. When the work is advertised online

Three common reports summarize the books. A PROFIT AND LOSS statement (P&L, or income statement) shows revenue, expenses and profit over a period, such as a month. A BALANCE SHEET shows, on one date, what the business owns (assets, like cash and equipment), what it owes (liabilities, like loans and unpaid bills), and the owner's equity: assets = liabilities + equity. A CASH FLOW statement shows where cash came from and went during a period. Each answers a different question.

An owner wants to know if March was profitable. Which report?

A. The March profit and loss statement
B. The balance sheet from last year
C. A list of customer names
D. The supplier's catalog

Set 63: Deductions versus credits

Outcome ENT.TAX.01: Tell a tax deduction from a tax credit, and explain that a deduction does not make a purchase free

Module: Foundation 8: Bookkeeping and taxes

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Two tax words are often confused. A DEDUCTION lowers the income that tax is calculated on (taxable income). A CREDIT lowers the tax itself, dollar for dollar. Example with a made-up 20 percent rate: a 1,000-dollar deduction lowers taxable income by 1,000 and saves about 0.20 x 1,000 = 200 dollars of tax; a 1,000-dollar credit cuts the tax by 1,000 dollars. Business expenses that are ordinary and necessary for the business are commonly deductible; which credits apply depends on current law, so check with a tax professional.

What does a deduction lower?

A. The income that tax is calculated on
B. The tax itself, dollar for dollar, after it is calculated
C. The price customers pay for each product
D. The interest rate on a business loan

Some items are used for both business and personal life: a car, a phone, a home internet plan, or part of a home. Generally only the BUSINESS-USE PORTION can be treated as a business expense. Keep evidence of the split: a mileage log for a car, or a reasonable record of phone use. Example: if a phone bill is 60 dollars and 40 percent of use is for business, the business portion is 0.40 x 60 = 24 dollars. Home office rules are specific; check official guidance or a tax professional.

Which item is most likely mixed-use?

A. Booth rent at a craft fair for selling
B. A family birthday cake for the owner's child
C. A cell phone used for clients and family
D. Packaging bought only for customer orders

Set 65: Sales tax versus income tax

Outcome ENT.TAX.03: Tell sales tax (collected from customers where required) from income tax (on profit)

Module: Foundation 8: Bookkeeping and taxes

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
SALES TAX is charged to customers on certain sales; the business collects it and sends it to the state or local government. It is not the business's money. Rules vary: some states have no general sales tax, and some items or services may be exempt. A business may need a permit or account before collecting. INCOME TAX is a tax on the business's profit (for many small businesses, reported on the owner's return). Keep collected sales tax separate so it is not spent by accident.

Who pays sales tax in the end?

A. Nobody; it is optional for every sale
B. The customer, collected by the business
C. The business, out of its own profit
D. The supplier, before the item is shipped

SALES TAX is charged to customers on certain sales; the business collects it and sends it to the state or local government. It is not the business's money. Rules vary: some states have no general sales tax, and some items or services may be exempt. A business may need a permit or account before collecting. INCOME TAX is a tax on the business's profit (for many small businesses, reported on the owner's return). Keep collected sales tax separate so it is not spent by accident.

A service business wonders whether its services are taxable. What should it do?

A. Check the state's rules for that service
B. Assume no services are ever taxable
C. Ask a customer to decide
D. Assume every service is taxable

Set 66: Self-employment tax and estimated payments

Outcome ENT.TAX.04: Explain the ideas of self-employment tax and paying estimated tax during the year

Module: Foundation 8: Bookkeeping and taxes

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
An employee usually has taxes WITHHELD (taken out) from each paycheck. A self-employed person usually does not, so two ideas matter. SELF-EMPLOYMENT TAX covers Social Security and Medicare on net earnings from self-employment; an employer would normally pay part of these for an employee, but a self-employed person pays them. ESTIMATED TAX PAYMENTS: because tax is pay-as-you-go, a self-employed person may need to send payments during the year instead of waiting until the return. This course teaches the ideas; rates and deadlines change, so check the IRS.

What does withheld mean for an employee's paycheck?

A. Her taxes are cancelled for the year
B. Her boss keeps her bonus as a reward
C. Her paycheck is held by the bank for a month
D. Taxes are taken out before she is paid

Because taxes for the self-employed are not withheld, a simple habit is to move a set percentage of each payment into a separate tax savings account. The right percentage depends on your situation; this course uses percentages like 25 or 30 percent only as PRACTICE ASSUMPTIONS, not as advice. Example with a 25 percent assumption: a 2,000-dollar payment means moving 500 dollars to tax savings. Check the amount with a tax professional or IRS tools, and adjust when income changes.

With a 25 percent assumption, how much of a 1,200-dollar payment goes to tax savings?

A. 1,200 dollars

B. 300 dollars

C. 900 dollars

D. 25 dollars

C. Multiply the two parts together to check
D. Set-aside plus kept equals the payment

REFERENCE LABEL: NOT PART OF THE QUESTION ID S67-B1-Q5
Entrepreneurship, Set 67: Setting money aside for taxes · BACKWARD 1 (math prerequisite) · Q5/5 · Outcome ENT.TAX.05 (local)

Learn
Because taxes for the self-employed are not withheld, a simple habit is to move a set percentage of each payment into a separate tax savings account. The right percentage depends on your situation; this course uses percentages like 25 or 30 percent only as PRACTICE ASSUMPTIONS, not as advice. Example with a 25 percent assumption: a 2,000-dollar payment means moving 500 dollars to tax savings. Check the amount with a tax professional or IRS tools, and adjust when income changes.

A freelancer receives 1,500, 900 and 2,100 dollars in a month. With a 25 percent assumption, how much goes to tax savings?

A. 3,375 dollars
B. 4,500 dollars
C. 375 dollars
D. 1,125 dollars

Set 68: Records, tax forms and professional help

Outcome ENT.TAX.06: Keep records for the needed period, recognize payment-reporting forms as a concept, and know when to ask a tax professional

Module: Foundation 8: Bookkeeping and taxes

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Keep records that support income, deductions or credits until the period of limitations for that tax return runs out. The IRS says this is generally 3 years, with longer periods in some situations, such as certain errors or employment tax records. Keep receipts, invoices, bank statements, mileage logs and copies of filed returns, stored safely (for example, scanned with a backup). Tax forms depend on the business structure. Ask a tax professional when your situation is complex or you are unsure which forms apply.

What does the IRS say is the general period for keeping supporting records?

A. 3 years, with longer periods in some situations
B. 1 month, after which records can be thrown away
C. Forever, for every single receipt in every case
D. Only until the money is spent

REFERENCE LABEL: NOT PART OF THE QUESTION ID S68-M-Q1

Set 69: Quotes and proposals

Outcome ENT.PAY.01: Write or judge a quote that states the work, price and what is not included

Module: Foundation 9: Selling and getting paid

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A QUOTE (or estimate) tells a customer what a job will cost before work begins. A PROPOSAL adds more detail: the problem, what you will deliver, the timeline, the price and the terms. A clear quote lists what IS included and what is NOT, how long the price is valid (for example 30 days), and any deposit required. Build the price from your costs and time, not from a guess. Vague quotes ("about 500, maybe more") lead to arguments later.

What does a quote tell a customer?

A. How much the business paid for its last tax return
B. Which competitor charges the lowest price nearby
C. How many hours the owner slept last week
D. What a job will cost before work begins

REFERENCE LABEL: NOT PART OF THE QUESTION ID S69-M-Q1

A QUOTE (or estimate) tells a customer what a job will cost before work begins. A PROPOSAL adds more detail: the problem, what you will deliver, the timeline, the price and the terms. A clear quote lists what IS included and what is NOT, how long the price is valid (for example 30 days), and any deposit required. Build the price from your costs and time, not from a guess. Vague quotes ("about 500, maybe more") lead to arguments later.

What does a proposal usually add beyond a quote?

A. A copy of the owner's personal bank statements
B. Nothing at all; they are always identical
C. A list of the owner's favorite hobbies and interests
D. The problem, deliverables and timeline

A good menu says "Burger with fries, 12 dollars; cheese is 1 dollar extra." You know what you get and what costs more. A bad menu says "Food, about 10, maybe more." A quote should read like the good menu: what is included, what is extra, and the price, so nobody is surprised when the bill arrives.

Which menu line is clearer?

A. "Prices change every hour"
B. "Burger with fries, 12 dollars; cheese 1 dollar extra"
C. "Food, about 10 dollars, maybe more, depending on the day"
D. "Ask the cook what it costs"

Set 70: Invoices, payment terms and deposits

Outcome ENT.PAY.02: Read and set payment terms, due dates and deposits

Module: Foundation 9: Selling and getting paid

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
PAYMENT TERMS say when and how the customer will pay. Write them in the quote or contract before work starts: the deposit amount, when the balance is due (for example "due on completion" or "Net 15"), accepted payment methods, and any late fee if allowed where you operate. For larger jobs, MILESTONE payments split the price into parts paid at stages, such as 30 percent to start, 40 percent at the midpoint, 30 percent at the end.

When should payment terms be written down?

A. After the customer refuses to pay
B. Only if the job is under 10 dollars
C. Never; spoken promises are always enough
D. Before work starts

An owner forgot to write terms and the client pays 75 days later. What lesson applies?

A. Clients always pay on time
B. Terms only matter for big companies
C. Never work for clients again
D. Put terms in writing before starting

REFERENCE LABEL: NOT PART OF THE QUESTION ID S70-F2-Q4
Entrepreneurship, Set 70: Invoices, payment terms and deposits · FORWARD 2: HANDLE THE COMPLICATIONS · Q4/5 · Outcome ENT.PAY.02 (local)

Learn
PAYMENT TERMS say when and how the customer will pay. Write them in the quote or contract before work starts: the deposit amount, when the balance is due (for example "due on completion" or "Net 15"), accepted payment methods, and any late fee if allowed where you operate. For larger jobs, MILESTONE payments split the price into parts paid at stages, such as 30 percent to start, 40 percent at the midpoint, 30 percent at the end.

Which statement is accurate?

A. Milestones are illegal for small jobs.
B. Late fees are allowed everywhere.
C. Written terms guarantee that every single client will always pay early.
D. Clear written terms make late payments less likely and easier to address.

Set 71: Cancellations, refunds and expectations

Outcome ENT.PAY.03: Write clear cancellation and refund terms and apply them consistently

Module: Foundation 9: Selling and getting paid

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A CANCELLATION POLICY says what happens if a customer cancels: for example, "full refund if cancelled 7 days before; 50 percent refund within 7 days; no refund within 24 hours." Policies protect your time, because a last-minute cancellation leaves a slot you may not fill. Set EXPECTATIONS too: what the customer will receive, when, and how to contact you. Share the policy before booking, apply it consistently, and allow exceptions only on purpose, such as emergencies.

Why have a cancellation policy?

A. Last-minute cancellations leave slots you may not fill
B. Because the law requires the same policy everywhere
C. To stop customers from ever booking again
D. To avoid writing any expectations at all

Learn
When you buy a theater ticket, the theater holds a seat for you and turns other people away. If you cancel an hour before, the seat is probably empty. That is why tickets often have rules about refunds. A service business is similar: an appointment holds a slot of the owner's time. A cancellation policy is the ticket rules for that slot.

A booked appointment is like what?

A. A free gift for coming
B. A seat held at a show
C. A coupon
D. A tax

SCOPE is the work agreed in the quote or contract. SCOPE CREEP happens when extra requests keep being added without changing the price or timeline. Handle changes with a short CHANGE ORDER: a written note describing the new request, its added cost and time, approved by the customer before you start it. Small favors can be fine, but decide on purpose. Uncontrolled scope creep turns a profitable job into a loss.

A client refuses to pay for a change order she approved in writing. What supports the owner?

A. The signed change order
B. Nothing; approvals do not matter
C. A social media post
D. A memory of a phone call

Learn
A SUBSCRIPTION charges a customer on a schedule, such as monthly, until cancelled. Clear subscription terms state the price, how often it is charged, when renewal happens, how to cancel, and what happens after a free trial. Make cancelling easy and honest; hidden or difficult cancellation can break consumer rules and destroys trust. Plan for FAILED PAYMENTS (expired cards) with reminders. CHURN is the share of subscribers who cancel in a period; high churn means you must keep finding new customers.

What should subscription terms state?

A. Only the price, with no word about cancelling
B. Only the founder's name and photo
C. Price, frequency, renewal and how to cancel
D. Only the company's history and mission

Learn
Recurring revenue = subscribers x monthly price. If you have 150 subscribers at 12 dollars, that is 150 x 12 = 1,800 dollars a month. Churn percent = cancellations / starting subscribers. If 6 of 150 cancel, 6 / 150 = 0.04 = 4 percent. Losing subscribers lowers next month's revenue: 144 x 12 = 1,728. That is 72 dollars less every month.

100 subscribers at 15 dollars. What is monthly revenue?

A. 150
B. 15,000
C. 1,500
D. 115

Set 74: Chargebacks and payment disputes

Outcome ENT.PAY.06: Explain a chargeback and gather evidence to respond

Module: Foundation 9: Selling and getting paid

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A CHARGEBACK happens when a card customer disputes a charge with their card issuer (their bank). The merchant may lose the payment and pay a fee, but can usually respond with EVIDENCE by the deadline on the dispute notice; deadlines depend on the card network and reason. Useful evidence includes receipts, delivery tracking, signed agreements and messages. Prevent disputes with clear descriptions, a recognizable business name on card statements, fast responses to complaints, and a fair refund policy.

What is a chargeback?

A. A fee the business pays to open a bank account
B. A coupon the customer uses at checkout
C. A customer disputing a card charge with their bank
D. A refund the business chooses to give on its own

Learn
A CHARGEBACK happens when a card customer disputes a charge with their card issuer (their bank). The merchant may lose the payment and pay a fee, but can usually respond with EVIDENCE by the deadline on the dispute notice; deadlines depend on the card network and reason. Useful evidence includes receipts, delivery tracking, signed agreements and messages. Prevent disputes with clear descriptions, a recognizable business name on card statements, fast responses to complaints, and a fair refund policy.

A customer emails a complaint before disputing. What response best prevents a chargeback?

A. Tell them to contact their bank
B. Block their email
C. Reply quickly and offer a fair fix
D. Wait two weeks to reply

Set 75: Invoice and payment scams

Outcome ENT.PAY.07: Spot fraud signals in invoices, overpayments and changed payment details

Module: Foundation 9: Selling and getting paid

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Small businesses are common targets for payment scams. FAKE INVOICES bill for things you never ordered, such as directory listings. CHANGED BANK DETAILS scams send an email that looks like a real supplier asking you to pay a new account. OVERPAYMENT scams send too much money (often by a check that later bounces) and ask you to send back the difference. Protection: match invoices to orders, confirm any bank-detail change by calling a known number (not one in the email), and wait for funds to clear before refunding.

An email from "your supplier" says their bank account changed. What should you do?

A. Call the supplier at a number you already know
B. Reply to the same email asking if it is real
C. Pay the new account right away to avoid late fees
D. Call the phone number listed in that email

If a friend is going to be 30 minutes late for dinner, a text saying "Running 30 minutes late, traffic, still coming—want to order without me?" feels fine. A friend who just never shows up and says nothing feels terrible. Businesses work the same way: a delay with an early, honest message keeps trust; silence breaks it.

"Traffic" in the message is like what?

A. A discount
B. A new price
C. Explaining what happened
D. Blaming the customer

Learn
Suppliers have terms too: minimum order quantities, lead time (how long from order to delivery), payment terms, and return rules. Plan orders so supplies arrive before you need them. When something will be late, from your supplier or from you, COMMUNICATE EARLY: tell the customer what happened, the new expected date, and what you will do (for example, offer a choice to wait or cancel). Silence makes customers assume the worst; honest updates keep trust.

A shop sells 40 mugs a week. The supplier's lead time is 2 weeks. About how many mugs must be on hand when ordering to avoid running out before delivery?

A. 80 mugs
B. 40 mugs
C. 42 mugs
D. 20 mugs

Set 77: A clear offer and next action

Outcome ENT.WEB.01: Make a page say what is offered, for whom and what to do next

Module: Foundation 10: Website essentials

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A visitor decides in seconds whether a website is useful. The top of the main page should answer three questions: WHAT do you offer, WHO is it for, and WHAT should the visitor do next? The next action is called a CALL TO ACTION, such as "Book a free 15-minute call" or "Order now." Use one main call to action per page, in plain words, easy to see. Example: "Dog walking for busy owners in Eastfield. Book your first walk." Vague slogans like "Excellence in everything" do not tell visitors what to do.

Which three questions should the top of a main page answer?

A. When the owner was born, where she grew up, and her hobbies
B. What, who it is for, and what to do next
C. How big the company hopes to grow over the next ten years
D. Which web host and font the site uses for its pages

REFERENCE LABEL: NOT PART OF THE QUESTION ID S77-M-Q1

Set 79: Readable on phones, accessible forms

Outcome ENT.WEB.03: Make pages readable on phones and forms usable by more people

Module: Foundation 10: Website essentials

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Many visitors use phones, so check every page on a small screen. Text should be large enough to read without zooming, buttons big enough to tap, and nothing should require sideways scrolling. ACCESSIBILITY means people with disabilities can use the site too: give images short text descriptions (alt text), keep strong contrast between text and background, label every form field, and make forms short. A form with 3 fields is usually finished more often than one with 12.

What is alt text?

A. A short text description of an image
B. A second, alternative website for older visitors
C. A secret password typed to edit the website
D. The large heading at the top of each page

REFERENCE LABEL: NOT PART OF THE QUESTION ID S79-M-Q1

Set 81: HTTPS, testing and backups

Outcome ENT.WEB.05: Check HTTPS, test links, forms and checkout, and keep backups

Module: Foundation 10: Website essentials

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
HTTPS (shown by a lock icon and "https://" in the address bar) encrypts the connection between the visitor and the site; most builders and hosts provide it, often free. TEST before launch and after changes: click every link, submit every form, place a test order, and check on a phone. BACKUPS are copies of the site and its data; keep them regularly and know how to restore one. A backup you have never tested may not work when you need it.

What does HTTPS do?

A. Removes the need for any passwords
B. Makes the site rank first in every search
C. Encrypts the connection with visitors
D. Designs a new logo for the business

HTTPS (shown by a lock icon and "https://" in the address bar) encrypts the connection between the visitor and the site; most builders and hosts provide it, often free. TEST before launch and after changes: click every link, submit every form, place a test order, and check on a phone. BACKUPS are copies of the site and its data; keep them regularly and know how to restore one. A backup you have never tested may not work when you need it.

Which statement is accurate?

A. HTTPS makes a site impossible to break, so testing is not needed.
B. Testing is only needed once at launch.
C. Backups never need testing.
D. HTTPS, testing and tested backups reduce the damage from problems.

Set 82: Search visibility basics

Outcome ENT.WEB.06: Improve how search engines and people understand a page, without promised rankings

Module: Foundation 10: Website essentials

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
SEARCH VISIBILITY means people can find your site when they search. Basics: use the words customers actually type (for example "dog walker Eastfield" rather than "canine companionship solutions"); give each page a clear title and heading; write useful, original text; and for local businesses, keep the business name, address and phone the same everywhere and set up free local business listings. Results take time. Be wary of anyone promising "number one on search in a week."

Which words should a page use?

A. Random popular words unrelated to the business
B. Only the owner's inside jokes
C. Words customers actually type
D. Fancy terms customers never use

REFERENCE LABEL: NOT PART OF THE QUESTION ID S82-M-Q1
Entrepreneurship, Set 82: Search visibility basics · MAIN · Q1/5 · Outcome ENT.WEB.06 (local)

Learn
Count what matters. VISITS show how many people came, but USEFUL ACTIONS show whether the site works: bookings, orders, sign-ups, calls. CONVERSION RATE = useful actions / visits. Example: 20 orders from 800 visits is 20 / 800 = 2.5 percent. Track where visitors came from, and change one thing at a time so you know what made the difference. A big number of visits with no actions means the page is not doing its job.

A test ran for one day with 30 visits. One version got 2 orders, the other 1. What is the problem?

A. Tests always need only one day
B. Version B should be deleted now
C. Version A is proven better forever
D. The sample is too small to trust

Set 84: Founder case: Amazon starts with books

Outcome ENT.CASE.06: Apply a documented early decision (starting with one product category chosen for clear reasons) to a new online business

Module: Foundation 10: Website essentials

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Documented history (HistoryLink, a Washington State history encyclopedia): Amazon.com launched in July 1995 as an online bookstore, started from a rented house in Bellevue, Washington. Jeff Bezos chose books from a short list of possible products because of the huge number of titles in print and broad demand. Lesson drawn by this course (an interpretation): start online with one focused category that suits the web's strengths, such as offering more choice than a physical store. One success story does not guarantee the same result for another business.

According to the passage, what did Amazon.com sell when it launched?

A. Books
B. Groceries, clothing and electronics all at once
C. Streaming movies and music subscriptions
D. Cloud computing services for businesses

REFERENCE LABEL: NOT PART OF THE QUESTION ID S84-M-Q1

Learn
A physical bookstore can hold only so many books on its shelves. A website is not limited by shelf space: it can list far more titles than any single store. That is one way to see why books fit the web well. The documented facts are the launch, the category and the reason given; the explanation of shelf space is this course's way of making the reason concrete.

What limits a physical bookstore's selection?

A. The color of the walls
B. The owner's age
C. Shelf space
D. The weather outside

Set 85: Choosing a channel

Outcome ENT.MKT.01: Choose a marketing channel by where the stated customers already are

Module: Foundation 11: Marketing, sales and social media

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A MARKETING CHANNEL is a way of reaching customers: a social media platform, email, local flyers, a market stall, search, word of mouth, or partnerships with other businesses. Choose a channel by asking: Where do my target customers already spend time? What can I keep doing every week with my time and budget? Can I measure results? Starting with one or two channels done well usually beats a little effort on seven. A channel that works for one business may not work for another.

What is a marketing channel?

A. A television station the business must own itself
B. A way of reaching customers
C. The bank account where sales are deposited
D. A legal filing that registers the brand name

D. A new channel every week

REFERENCE LABEL: NOT PART OF THE QUESTION ID S85-F1-Q2
Entrepreneurship, Set 85: Choosing a channel · FORWARD 1: APPLY IT · Q2/5 · Outcome ENT.MKT.01 (local)

Learn
A MARKETING CHANNEL is a way of reaching customers: a social media platform, email, local flyers, a market stall, search, word of mouth, or partnerships with other businesses. Choose a channel by asking: Where do my target customers already spend time? What can I keep doing every week with my time and budget? Can I measure results? Starting with one or two channels done well usually beats a little effort on seven. A channel that works for one business may not work for another.

Flyers cost 60 dollars and brought 3 clients. Online posts took 5 hours and brought 6 clients. Which brought more clients?

A. Online posts, with 6

B. Neither brought any

C. They brought the same

D. Flyers, with 3

Set 86: Useful content and a clear next step

Outcome ENT.MKT.02: Write marketing that is useful, consistent and ends with a clear next action

Module: Foundation 11: Marketing, sales and social media

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Useful marketing content helps the reader before asking for anything: a short tip, an answer to a common question, a before-and-after photo of real work, or a simple how-to. Each piece should end with one clear NEXT STEP, such as "Book a call" or "See this week's menu." Write for one type of reader, use plain words, and be specific. "5 ways to keep your houseplants alive in winter" is more useful than "We love plants!"

What makes content useful?

A. It uses as many complicated words as possible
B. It talks only about how great the owner is
C. It helps the reader before asking for anything
D. It repeats "buy now" as many times as possible

Set 87: Email lists: permission and unsubscribing

Outcome ENT.MKT.03: Build an email list with permission and honor unsubscribe requests

Module: Foundation 11: Marketing, sales and social media

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
An EMAIL LIST lets you contact people who asked to hear from you. Build it with PERMISSION: a sign-up form where people choose to join. Under the US CAN-SPAM Act, commercial emails must not use misleading headers or subject lines, must tell recipients how to opt out, must honor opt-out requests, and must include a valid physical postal address (which can be a registered PO Box or private mailbox). The rules cover business-to-business email too. Buying lists of strangers' addresses damages trust and deliverability.

How should an email list be built?

A. By copying addresses from other companies' websites
B. By buying a list of strangers' addresses online
C. With permission, through a sign-up form
D. By guessing addresses at popular email providers

REFERENCE LABEL: NOT PART OF THE QUESTION ID S87-M-Q1

Think of a party. People you invited are glad to come. People who show up uninvited annoy everyone. An email list is your guest list: people who said "yes, invite me." When a guest says "please stop inviting me," you take them off the list. Sending emails to people who never signed up is like inviting gate-crashers.

Emailing people who never signed up is like what?

A. Inviting gate-crashers
B. Paying bills
C. Sending thank-you notes
D. Inviting friends

An EMAIL LIST lets you contact people who asked to hear from you. Build it with PERMISSION: a sign-up form where people choose to join. Under the US CAN-SPAM Act, commercial emails must not use misleading headers or subject lines, must tell recipients how to opt out, must honor opt-out requests, and must include a valid physical postal address (which can be a registered PO Box or private mailbox). The rules cover business-to-business email too. Buying lists of strangers' addresses damages trust and deliverability.

Mei's newsletter has no unsubscribe link. What should she add?

A. A bigger logo
B. More product photos
C. A clear way to opt out
D. A countdown timer

Set 88: Local outreach, referrals and networking

Outcome ENT.MKT.04: Plan local outreach and referral relationships that help both sides

Module: Foundation 11: Marketing, sales and social media

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Local businesses often grow through people. LOCAL OUTREACH means showing up where customers are: farmers markets, community events, partnerships with nearby businesses. REFERRALS are recommendations from happy customers; you can ask for them directly and make it easy ("Tell a friend; you both get 10 percent off"). NETWORKING means building real relationships with people who serve the same customers, like a wedding photographer and a florist. Follow up, keep promises, and give before you ask.

What is a referral?

A. A tax form sent to the state
B. A discount the owner gives only to herself
C. A paid ad on a billboard
D. A recommendation from a happy customer

Reviews and testimonials are powerful because they come from customers, so they must be REAL. Ask customers for permission before quoting them, use their actual words (fixing only small typos), and do not show a review as typical if it is not. Never write fake reviews, pay for positive reviews, or use AI to invent customer experiences; the FTC treats fake reviews and testimonials as deceptive. Respond calmly and helpfully to negative reviews; do not threaten or pay reviewers to remove them.

A review describes results most customers do not get. What should the owner avoid?

A. Keeping it on file
B. Presenting it as typical
C. Thanking the reviewer
D. Reading it carefully

When you apply for a job, a teacher might write a reference letter. It is valuable because it comes from someone else who knows your work. If you wrote the letter yourself and signed the teacher's name, it would be fake and could get you in serious trouble. Reviews are reference letters for a business: valuable only when they really come from customers.

Why is a reference letter valuable?

A. It is long
B. It is printed on thick, colorful paper
C. It comes from someone who knows your work
D. You wrote it

Set 90: Disclosing sponsorships and affiliate links

Outcome ENT.MKT.06: Recognize when a paid or affiliate relationship must be disclosed clearly

Module: Foundation 11: Marketing, sales and social media

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
If someone promoting a product has a MATERIAL CONNECTION to the business (they were paid, given free products, or earn a commission), that connection should be DISCLOSED clearly. An AFFILIATE LINK pays the promoter a commission when someone buys. Clear disclosures are short, plain and placed where people will see them before clicking or buying, such as "Ad," "Sponsored," or "I earn a commission if you buy." A platform's built-in disclosure tool is not automatically enough. Businesses should tell the people promoting them to disclose.

What is a material connection?

A. A friendship with no money or gifts involved at all
B. A broken internet connection
C. The material a product is made from
D. A payment, free product or commission tied to the promotion

REFERENCE LABEL: NOT PART OF THE QUESTION ID S90-M-Q1

Outcome ENT.MKT.07: Plan a small paid test with a stated budget and measure

Module: Foundation 11: Marketing, sales and social media

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
ORGANIC marketing reaches people without paying the platform for each view: posts, word of mouth, search. It costs time and builds slowly. PAID marketing (ads) buys reach quickly, but stops when the money stops. Before spending much, run a SMALL AD TEST: set a fixed budget you can afford to lose (for example 50 dollars), one clear goal (such as sign-ups), one audience, and a set time. Then compare cost per result: total spend / results. Example: 50 dollars and 10 sign-ups = 5 dollars per sign-up.

What is organic marketing?

A. A legal filing for a brand name
B. Reaching people without paying per view
C. Ads that cost the most money per click
D. Marketing that uses only farm products

Why test with one goal and one audience?

A. So no results are measured
B. So the result is clear
C. Because more goals are illegal
D. Because one audience always buys

REFERENCE LABEL: NOT PART OF THE QUESTION ID S91-M-Q5
Entrepreneurship, Set 91: Organic versus paid; a small ad test · MAIN · Q5/5 · Outcome ENT.MKT.07 (local)

Learn
Cost per result = total spent / number of results. Example: 80 dollars for 16 clicks is 80 / 16 = 5 dollars per click. Compare two tests by their cost per result: lower is cheaper for the same kind of result. Check: cost per result x results should equal total spent (5 x 16 = 80). If results are 0, cost per result cannot be calculated: the test found nothing.

100 dollars for 20 results. What is the cost per result?

A. 2,000 dollars
B. 20 dollars
C. 5 dollars
D. 0.20 dollars

Finding the step where most people drop off shows what to improve: the message, the offer or the follow-up.

Campaign B gets many leads but few buy. Which step should it improve?

A. Nothing; it is perfect
B. Reach, by showing the same ads to many more people
C. The logo colors
D. The follow-up or offer after someone shows interest

REFERENCE LABEL: NOT PART OF THE QUESTION ID S92-F1-Q3
Entrepreneurship, Set 92: Reach, leads, sales and conversion rate · FORWARD 1: APPLY IT · Q3/5 · Outcome ENT.MKT.08 (local)

Learn
Marketing results can be followed in steps. REACH is how many people saw your message. LEADS are people who showed interest, such as signing up or asking a question. SALES are people who paid. Each step has a CONVERSION RATE: leads / reach, and sales / leads. Example: 2,000 reached, 100 leads (5 percent), 20 sales (20 percent of leads). Finding the step where most people drop off shows what to improve: the message, the offer or the follow-up.

A shop reaches 3,000 people, gets 4 percent as leads and 25 percent of leads buy. How many sales?

A. 30
B. 120
C. 12
D. 750

Set 93: Fake followers, audience ownership and algorithm changes

Outcome ENT.MKT.09: Explain why bought followers mislead and why owning a direct contact list reduces platform risk

Module: Foundation 11: Marketing, sales and social media

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Big numbers can mislead. FAKE FOLLOWERS (bought or bot accounts) inflate counts but never buy, and can hurt how a platform shows your posts. AUDIENCE OWNERSHIP: on social platforms, the platform controls who sees your posts and can change its rules or ALGORITHM (the system that decides what people see) at any time, or suspend accounts. An email list or customer list that people joined with permission is closer to an audience you control. Build some of both, and never rely on a single platform.

Why are fake followers harmful?

A. They lower ad costs automatically
B. They buy more than real followers
C. They inflate counts but never buy
D. They are required for success

REFERENCE LABEL: NOT PART OF THE QUESTION ID S93-M-Q1
Entrepreneurship, Set 93: Fake followers, audience ownership and algorithm changes · MAIN · Q1/5 · Outcome ENT.MKT.09 (local)

A. To use more pans
B. To waste food
C. To save time during a busy week
D. To avoid ever cooking again

REFERENCE LABEL: NOT PART OF THE QUESTION ID S94-B1-Q4
Entrepreneurship, Set 94: Scheduling content and following platform rules · BACKWARD 1 (concept simplification) · Q4/5 · Outcome ENT.MKT.10 (local)

Learn
Some people cook meals for the week on Sunday, then just heat them up. Batching content works the same way: write several posts in one sitting, then schedule them for the week. A content calendar is the meal plan. And just as a kitchen has safety rules, each platform has rules about what you can post.

Heating up a prepared meal is like what?

A. Breaking a rule
B. Deleting a post
C. Writing a new post from scratch
D. A scheduled post going live

REFERENCE LABEL: NOT PART OF THE QUESTION ID S94-B1-Q5
Entrepreneurship, Set 94: Scheduling content and following platform rules · BACKWARD 1 (concept simplification) · Q5/5 · Outcome ENT.MKT.10 (local)

Learn
Consistency beats bursts. A CONTENT CALENDAR plans what to post and when, for example two useful posts a week on set days. Batch work: write several posts in one session, then schedule them. Each platform has its own RULES (community guidelines and terms): limits on contests, restricted products, copyrighted music and images, and what ads may claim. Read the rules for each platform you use; breaking them can get posts removed or accounts suspended. Use only images and music you have the right to use.

An owner plans 2 posts a week for 4 weeks and writes them in batches of 4. How many batch sessions does she need?

A. 2
B. 1
C. 4
D. 8

Set 95: Founder case: Blue Ribbon Sports sells at track meets

Outcome ENT.CASE.07: Apply a documented early decision (selling where the customers gather) to a new business

Module: Foundation 11: Marketing, sales and social media

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Documented history (Britannica): Phil Knight and his former coach Bill Bowerman formed Blue Ribbon Sports in 1964 to distribute Onitsuka Tiger running shoes from Japan. Knight sold shoes from his car at regional track meets while working other jobs. The company became Nike after splitting from Onitsuka in 1971. Lesson drawn by this course (an interpretation): go in person to the places where your most interested customers already gather, and start part time if you need income. One success story does not guarantee the same result for another business.

According to the passage, what did Blue Ribbon Sports first do?

A. Manufacture its own shoes in a large factory
B. Sell clothing in department stores
C. Run a chain of gyms
D. Distribute Onitsuka Tiger running shoes from Japan

REFERENCE LABEL: NOT PART OF THE QUESTION ID S95-M-Q1

Walker sold her hair-care products door to door, advertised in African American newspapers, trained and recruited sales agents, ran a mail-order business and a beauty school, and incorporated her company in Indianapolis in 1910. Lesson drawn by this course (an interpretation): build several channels that reach your customers directly, and train other people to sell and teach, so the business is not limited to one person's time. One success story does not guarantee the same result for another business.

Which lesson does this course draw?

A. Avoid advertising entirely
B. Rely on one person doing every sale forever
C. Build several direct channels and train others to sell
D. Sell only to strangers who never use the product

Documented history (Indiana Historical Society): Madam C. J. Walker sold her hair-care products door to door, advertised in African American newspapers, trained and recruited sales agents, ran a mail-order business and a beauty school, and incorporated her company in Indianapolis in 1910. Lesson drawn by this course (an interpretation): build several channels that reach your customers directly, and train other people to sell and teach, so the business is not limited to one person's time. One success story does not guarantee the same result for another business.

Which statement about the Madam C. J. Walker case is accurate?

A. It shows one approach, not a guarantee for other sellers.
B. It proves door-to-door sales always succeed for products.
C. It shows advertising is useless.
D. It shows training agents never helps.

One teacher can teach only so many students in a day. A school with many trained teachers can teach thousands. Walker's recruiting and training of agents and her beauty school are documented. This course's explanation is that training others let the business reach more customers than one person could reach alone. Facts are recorded; explanations are interpretations.

Why can a school teach more students than one teacher?

A. It has many trained teachers
B. It charges less
C. It has longer days
D. It has bigger desks and rooms

Set 97: Useful jobs for AI tools

Outcome ENT.AI.01: Choose tasks where an AI tool helps (drafts, outlines, ideas, summaries)

Module: Foundation 12: AI as a practical helper

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
AI tools (programs that generate text, images or summaries from a request) can save time on DRAFTING and ORGANIZING work: a first draft of a product description, a summary of long notes, ideas for a social post, a list of questions to ask a supplier, or reformatting a price list. They are weaker at work that needs verified facts, legal or tax certainty, or knowledge of your specific customers. A good rule: let the tool draft, and let a person who knows the business check and decide.

Which task suits an AI tool well?

A. Drafting a first version of a product description
B. Confirming this year's exact tax rules with certainty
C. Knowing which local customers will definitely buy
D. Deciding the final legal structure for the business alone

REFERENCE LABEL: NOT PART OF THE QUESTION ID S97-M-Q1

AI tools (programs that generate text, images or summaries from a request) can save time on DRAFTING and ORGANIZING work: a first draft of a product description, a summary of long notes, ideas for a social post, a list of questions to ask a supplier, or reformatting a price list. They are weaker at work that needs verified facts, legal or tax certainty, or knowledge of your specific customers. A good rule: let the tool draft, and let a person who knows the business check and decide.

Which statement is accurate?

A. AI outputs need no review.
B. AI tools never help small businesses.
C. AI tools help most with drafts and organizing, with a person checking.
D. AI tools fully replace all professional advice for small businesses.

Set 98: Asking clearly: task, context, audience

Outcome ENT.AI.02: Write a clear request with task, context and audience, and improve it step by step

Module: Foundation 12: AI as a practical helper

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
An AI tool works better with a clear request (often called a PROMPT). Include: the TASK ("write a 50-word product description"), the CONTEXT (what the product is, price, who makes it), the AUDIENCE ("busy parents"), and any LIMITS (tone, length, words to avoid, facts that must be included). Vague requests like "write something good" give vague results. If the first answer is off, refine the request with specific feedback.

Which request is clearest?

A. "Do marketing."
B. "Write something good about our soap for people, please, thanks."
C. "Make it nice."
D. "Write a 50-word description of our 12-dollar lavender soap for busy parents."

Check any fact that matters: numbers, dates, laws, prices, names and quotations. Use the original or official source, not another AI answer. If a source is given, open it and confirm it says what was claimed. When you cannot verify a fact, leave it out.

An AI draft gets the price right but the store hours wrong. What does this show?

A. One correct fact does not mean all facts are correct
B. Store hours never matter
C. The whole draft must be reliable then, including hours
D. Prices are always wrong

Learn
AI tools can produce answers that sound confident but are wrong or invented, sometimes called HALLUCINATIONS: a fake statistic, a law that does not exist, a made-up source, or a wrong price. Check any fact that matters: numbers, dates, laws, prices, names and quotations. Use the original or official source, not another AI answer. If a source is given, open it and confirm it says what was claimed. When you cannot verify a fact, leave it out.

Two AI tools give the same wrong answer. Is that verification?

A. Yes, if both sound confident
B. No, verification needs an original source
C. Only if a third agrees
D. Yes, two tools always confirm truth

Set 100: Confidential data and tool terms

Outcome ENT.AI.04: Keep private customer and business data out of tools whose terms do not allow it

Module: Foundation 12: AI as a practical helper

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Before putting information into an AI tool, think about who could see it. Some tools may store what you type or use it to improve their systems, depending on the tool's TERMS and settings. Do not paste CONFIDENTIAL information unless you know how it is handled: customer names with contact details, card numbers, passwords, private health details, or a client's secret plans. Read the tool's privacy terms, check business settings, and remove or replace personal details (for example "Customer A") when you can.

What may some AI tools do with what you type?

A. Send it back to you as a printed letter
B. Turn it into a legal contract automatically for you to sign
C. Store it or use it to improve their systems, depending on terms
D. Delete it before you finish typing, always

Set 102: Measuring benefit and choosing tools

Outcome ENT.AI.06: Choose AI tools by task, cost and measured results, and track subscriptions

Module: Foundation 12: AI as a practical helper

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A tool is worth using only if it helps. MEASURE the benefit: time saved, errors reduced, or sales gained, compared with the cost (subscription price plus time spent learning and checking). Example: a 20-dollar-a-month tool that saves 3 hours a month is worth it if your time is worth more than about 6.67 dollars an hour. Try a tool on one task first, compare before and after, and drop tools that do not help. Check terms, data handling and whether you can export your work.

Which is a cost of a tool besides its price?

A. Time spent learning and checking its work
B. The number of its employees worldwide
C. Its company slogan
D. The color of its logo

REFERENCE LABEL: NOT PART OF THE QUESTION ID S102-M-Q1

Imagine a used-car ad where the seller edits out the dents and rust. Buyers drive over, see the real car and feel cheated. AI can make that kind of edit in seconds. The rule stays the same as before AI: show the product as it really is and say only what you can back up.

Does AI change the honesty rule?

A. Yes, AI edits are always allowed
B. Yes, rules vanish online
C. Only for cars
D. No, the same rule applies

REFERENCE LABEL: NOT PART OF THE QUESTION ID S103-B1-Q3

AI makes it easy to create text and images, which makes it easy to deceive by accident or on purpose. Never use AI to invent customer testimonials or reviews, create fake "before and after" photos, imply endorsements that did not happen, or make claims you cannot support, such as "clinically proven" or "number one in the state." The FTC treats fake reviews and testimonials as deceptive. Use AI to draft honest descriptions of what your product actually does, and label AI-generated images where it would affect a buyer's decision.

An AI draft for a candle shop includes "Loved by 50,000 customers," but the shop has 600. What should the owner do?

A. Replace it with a true statement or remove it
B. Change it to 40,000
C. Add "approximately"
D. Keep it, because big numbers sound good

Set 104: Simple procedures and scheduling

Outcome ENT.OPS.01: Write a short repeatable procedure and schedule work realistically

Module: Foundation 13: Operations and overlooked admin

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A PROCEDURE (or checklist) writes down the steps for a task that repeats, such as opening the shop, packing an order, or closing out the day. Written steps reduce mistakes, make work faster, and let a helper do the task the same way. Keep each checklist short, in order, and updated when something changes. A simple SCHEDULE blocks time for paid work, for admin (invoices, email, bookkeeping) and for rest, so important tasks are not always pushed to "later."

What is a procedure in a small business?

A. A legal filing that registers the business
B. Written steps for a task that repeats
C. A one-time speech the owner gives on opening day
D. A medical operation for the business owner

REFERENCE LABEL: NOT PART OF THE QUESTION ID S104-M-Q1

Set 105: Inventory and reorder points

Outcome ENT.OPS.02: Compute a reorder point from stated daily sales and delivery time

Module: Foundation 13: Operations and overlooked admin

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
INVENTORY is the stock of goods or materials you hold to sell. Too little and you run out; too much ties up cash and risks damage or items going out of style. A REORDER POINT tells you when to order more: reorder point = average daily use x lead time (days to arrive) + SAFETY STOCK (a small extra cushion). Example: you sell 4 mugs a day, delivery takes 10 days, safety stock is 10: reorder point = 4 x 10 + 10 = 50 mugs. Count stock regularly so records match the shelf.

What is safety stock?

A. Inventory locked in a safe for security reasons only
B. Items set aside to be thrown away later
C. A small extra cushion of inventory
D. Stock the owner keeps for personal use at home

REFERENCE LABEL: NOT PART OF THE QUESTION ID S105-M-Q1

Learn
INVENTORY is the stock of goods or materials you hold to sell. Too little and you run out; too much ties up cash and risks damage or items going out of style. A REORDER POINT tells you when to order more: reorder point = average daily use x lead time (days to arrive) + SAFETY STOCK (a small extra cushion). Example: you sell 4 mugs a day, delivery takes 10 days, safety stock is 10: reorder point = 4 x 10 + 10 = 50 mugs. Count stock regularly so records match the shelf.

What is lead time?

A. Days a customer waits to pay
B. Time spent on marketing
C. Days for an order to arrive
D. Hours a store is open each day

Learn
Reorder point uses the order of operations: multiply first, then add. Daily use x lead time tells how many items sell while you wait for delivery. Then add safety stock. Example: 6 a day x 7 days = 42, plus 8 safety = 50. A common mistake is adding first: (6 + 7) x 8 = 104, which is wrong. Check by asking whether the answer is about one delivery-wait of sales plus a little extra.

What is 3 x 9 + 5?

A. 42
B. 27
C. 17
D. 32

Set 106: Subscriptions, free trials and cancellation dates

Outcome ENT.OPS.03: Track software subscriptions and free-trial end dates

Module: Foundation 13: Operations and overlooked admin

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Small recurring charges add up. A business may pay for software, storage, design tools, a website plan, and several FREE TRIALS that turn into paid plans. Keep a SUBSCRIPTION LIST with each service, its cost, how often it bills, the renewal date, the card it uses, and who owns the login. Put trial end dates and renewal dates on a calendar a few days early, review the list every few months, and cancel what you no longer use.

What should a subscription list include?

A. Only the service names, with nothing else at all
B. Only the owner's favorite apps
C. Only services that are free forever
D. Service, cost, cycle, renewal date, card, login owner

Small recurring charges add up. A business may pay for software, storage, design tools, a website plan, and several FREE TRIALS that turn into paid plans. Keep a SUBSCRIPTION LIST with each service, its cost, how often it bills, the renewal date, the card it uses, and who owns the login. Put trial end dates and renewal dates on a calendar a few days early, review the list every few months, and cancel what you no longer use.

A business card expires and a key service fails to renew. What prevents surprise outages?

A. Ignoring card expiry dates
B. Updating the card on the list when it changes
C. Using many different cards randomly for each tool
D. Never renewing anything

Set 107: Passwords, two-step login and backups

Outcome ENT.OPS.04: Protect accounts with unique passwords, multifactor authentication and backups

Module: Foundation 13: Operations and overlooked admin

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Business accounts (bank, email, website, payment processor) are valuable targets. Basics: use a long, UNIQUE password for each account, stored in a PASSWORD MANAGER (a secure app that remembers passwords). Turn on TWO-STEP LOGIN (also called two-factor authentication), which asks for a second proof, such as a code from an app, so a stolen password alone is not enough. Keep BACKUPS of important files in a separate place and test that you can restore them. Be wary of messages asking for codes or passwords.

What does two-step login add?

A. An automatic backup of every file

B. A longer username for the account

C. A second password that is the same as the first

D. A second proof, so a stolen password alone is not enough

REFERENCE LABEL: NOT PART OF THE QUESTION ID S107-M-Q1

Give each person their OWN login rather than sharing one password, and give only the ACCESS they need for their job (called least privilege): a helper who packs orders may need the order list, not the bank account. Keep a list of who has access to what. The owner should hold the main (administrator) account for key services. When someone leaves or changes roles, remove or change their access the same day.

A designer set up the store under her own admin account and stopped replying. What could the owner have done?

A. Avoided having a store
B. Given the designer even more access to everything
C. Nothing could prevent it
D. Kept the admin account in her own name from the start

Businesses have recurring deadlines: state annual reports, license and permit renewals, sales tax filings, estimated tax payments, insurance renewals, domain renewals, and registered agent fees. Missing one can bring late fees, penalties, or even a business being marked inactive by the state. Keep one DEADLINE CALENDAR with each item, its due date, how often it repeats, where to file, and a reminder set early enough to gather what you need, such as two weeks before.

Sales tax is filed quarterly. How many filings a year?

A. 12
B. 3
C. 4
D. 1

Set 111: Official notices versus paid solicitations

Outcome ENT.OPS.08: Tell an official government notice from a look-alike paid offer and verify it

Module: Foundation 13: Operations and overlooked admin

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
New businesses receive official-looking letters. Some are real: tax agency notices, state filing reminders. Others are PAID SOLICITATIONS designed to look official, offering to file your annual report or provide a "certificate" for a large fee, or charging for things that are free, like an EIN from the IRS. Check the sender's name, look for small print saying "this is not a government agency," and verify by going to the official website or calling a number you find yourself. Never pay just because a letter looks urgent.

What is a paid solicitation in this context?

A. A customer's payment
B. An offer designed to look official that charges a fee
C. A supplier invoice for goods the business received
D. A real tax bill from the IRS

REFERENCE LABEL: NOT PART OF THE QUESTION ID S111-M-Q1

Many people leave a spare key with a trusted neighbor and tell them which plants need water if they are away. If they lose their own key, they can still get in; if they are sick, the neighbor can help. Backup codes are the spare key. A continuity plan is the note telling the neighbor what to do.

Who keeps the spare key?

A. Nobody
B. The mail carrier
C. A stranger
D. A trusted neighbor

Learn
A business should keep running if something goes wrong: a lost phone, a hacked email, a sick owner. Prepare RECOVERY OPTIONS: backup codes for two-step login stored safely, an up-to-date recovery email and phone, and knowledge of how to reach each service's support. Write a short CONTINUITY PLAN: where key information is, who can step in for urgent tasks, and how customers will be told about delays. Test the plan once, for example by logging in with backup codes.

An owner's phone holds her two-step codes and is lost. Which preparation would have helped most?

A. A longer password on the lost phone only

B. Backup codes stored safely elsewhere

C. More apps

D. A new phone case

Set 114: Limits of personal and home policies

Outcome ENT.RISK.02: Recognize that personal or home policies may not cover business activity, and when to ask an agent

Module: Foundation 14: Insurance, contracts and risk

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Many owners assume their HOMEOWNERS or RENTERS insurance covers a home business. Often it does not, or covers very little: business equipment and inventory may have low limits, and injuries to customers visiting the home for business may be excluded. A PERSONAL AUTO policy may not cover driving for business deliveries. Ask your insurer directly: "Does this policy cover my business activities?" Options can include a home-business add-on (often called an endorsement) or a separate business policy.

Does a homeowners policy always cover a home business?

A. Yes, but only if the business is profitable
B. Not necessarily; coverage may be limited or excluded
C. No home policy can ever be changed
D. Yes, every home policy covers any business fully

REFERENCE LABEL: NOT PART OF THE QUESTION ID S114-M-Q1

Many owners assume their HOMEOWNERS or RENTERS insurance covers a home business. Often it does not, or covers very little: business equipment and inventory may have low limits, and injuries to customers visiting the home for business may be excluded. A PERSONAL AUTO policy may not cover driving for business deliveries. Ask your insurer directly: "Does this policy cover my business activities?" Options can include a home-business add-on (often called an endorsement) or a separate business policy.

What may a personal auto policy not cover?

A. Driving to a doctor visit
B. Driving to the grocery store
C. Driving for business deliveries
D. Driving to visit family

Learn
Imagine using the family car to drive paying passengers. The family car insurance was priced for school runs and grocery trips, not for business driving all day. The insurer may say the business use was never part of the deal. Home and personal policies work the same way: they were priced for personal life, so business activities may fall outside them.

Why might the car insurer refuse a taxi claim?

A. The car was red
B. Passengers were too polite
C. Business driving was not part of the policy
D. The trip was too short to count as driving

Set 115: What a written agreement covers

Outcome ENT.RISK.03: Check an agreement for scope, payment, responsibilities, cancellation and ownership of work

Module: Foundation 14: Insurance, contracts and risk

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A written AGREEMENT (contract) records what both sides promised, so there is less room for "I thought you meant..." A simple service or sales agreement usually covers: who the parties are; what will be delivered (scope); price and payment terms; timeline; what happens if plans change, including cancellation and refunds; who owns the finished work; and how disagreements will be handled. Use plain words, keep a signed copy, and have important or unusual agreements reviewed by an attorney.

Why put an agreement in writing?

A. It replaces the need to do the work
B. It records what both sides promised
C. It makes any promise automatically legal everywhere
D. It hides the price from the customer

REFERENCE LABEL: NOT PART OF THE QUESTION ID S115-M-Q1

Set 116: Signed documents and customer information

Outcome ENT.RISK.04: Keep signed documents and protect customer information

Module: Foundation 14: Insurance, contracts and risk

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Keep SIGNED DOCUMENTS (contracts, waivers, change orders) where you can find them, with a backup. Collect only the CUSTOMER INFORMATION you need, such as name, contact details and what they ordered. Protect it: limit who can see it, do not leave lists in public places, never store full card numbers yourself (let the payment processor handle them), and delete what you no longer need. If you promise privacy in a policy, keep that promise. Some kinds of data, such as health details, have special rules.

What customer information should be collected?

A. Only what the business needs
B. Customers' full card numbers in a notebook
C. Everything possible, just in case
D. Customers' passwords to other sites

Set 117: Permission to use images, music, code and names

Outcome ENT.RISK.05: Recognize copyright and trademark issues and get permission or use licensed material

Module: Foundation 14: Insurance, contracts and risk

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Things you find online are usually owned by someone. Using another person's PHOTO, MUSIC, ARTWORK, written text or software CODE in your business generally needs PERMISSION, a LICENSE (written terms of use), or a source that clearly allows your kind of use. "I found it on Google" is not permission. Read license terms: some allow only personal use, or require credit. Using another business's NAME or LOGO in a way that confuses customers can infringe trademark rights. Registering a business name, DBA or domain is not the same as trademark rights.

Is "I found it on Google" permission to use a photo?

A. Yes, anything online is free to use
B. Yes, for businesses only
C. Yes, if the photo is small
D. No

Things you find online are usually owned by someone. Using another person's PHOTO, MUSIC, ARTWORK, written text or software CODE in your business generally needs PERMISSION, a LICENSE (written terms of use), or a source that clearly allows your kind of use. "I found it on Google" is not permission. Read license terms: some allow only personal use, or require credit. Using another business's NAME or LOGO in a way that confuses customers can infringe trademark rights. Registering a business name, DBA or domain is not the same as trademark rights.

A designer gives the owner a logo but the contract does not say who owns it. What should she get?

A. A written transfer or license of the logo rights
B. A new color
C. A bigger file size
D. Nothing; paying means owning automatically

Set 118: Truthful advertising and handling complaints

Outcome ENT.RISK.06: Keep claims supportable and handle complaints promptly and fairly

Module: Foundation 14: Insurance, contracts and risk

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Advertising must be TRUTHFUL and not misleading, and claims that need proof must be supported before they are made. This includes prices ("from 20 dollars" must be available), comparisons ("cheaper than X" must be accurate), environmental claims ("eco-friendly"), and fake urgency ("only 2 left" when there are 200). Fake reviews and testimonials are deceptive. When customers COMPLAIN, respond quickly and calmly, find out what happened, fix what you can, and keep a record. Complaints often show where to improve.

Which claim is misleading?

A. "Handmade in Ohio" when it is
B. "Ships in 3 days" when that is the usual time
C. "Only 2 left!" when there are 200
D. "From 20 dollars" when 20-dollar items exist

Owners often try to do everything themselves to save money. Compare the cost of HIRING HELP with the value of your own time and the risk of mistakes. Example: if you can earn 50 dollars an hour on paid work and a bookkeeper charges 35 dollars an hour, paying the bookkeeper may free time for better-paid work. Get help for tasks that are complex, risky, or that you do slowly; keep tasks that are simple and central to your business. Start small, for example a few hours a month.

A photographer spends 8 hours a month on bookkeeping and earns 60 dollars an hour shooting. A bookkeeper does it in 3 hours at 40 dollars. What does the bookkeeper cost?

A. 43 dollars
B. 320 dollars
C. 480 dollars
D. 120 dollars

Set 120: Contractor or employee is not just a label

Outcome ENT.HELP.02: Explain that worker classification depends on the real working relationship and current rules

Module: Foundation 15: Help, delegation and partners

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Whether a worker is an EMPLOYEE or an INDEPENDENT CONTRACTOR depends on the actual working relationship, not on the label in a contract. Factors often include how much control the business has over how and when the work is done, whether the worker can profit or lose based on their own decisions, whether they work for other clients, who provides tools, and whether the work is ongoing. Federal rules have changed several times, and states may use stricter tests. Misclassification can bring back taxes and penalties, so check current rules or ask a professional.

What decides whether a worker is an employee or contractor?

A. The actual working relationship
B. Only what the worker prefers to be called
C. Only the size of the paycheck
D. Only the title written in the contract

REFERENCE LABEL: NOT PART OF THE QUESTION ID S120-M-Q1
Entrepreneurship, Set 120: Contractor or employee is not just a label · MAIN · Q1/5 · Outcome ENT.HELP.02 (local)

Set 121: Payroll responsibilities (the idea)

Outcome ENT.HELP.03: Describe the ideas of payroll withholding and employer responsibilities

Module: Foundation 15: Help, delegation and partners

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Hiring an EMPLOYEE brings PAYROLL duties. In general terms, an employer withholds certain taxes from the employee's pay, pays its own share of some payroll taxes, sends the money and reports to tax agencies on schedule, follows minimum wage and overtime rules, and gives the employee year-end tax forms. Many states also require registration and may require workers' compensation insurance. This course teaches the idea; rates, forms and deadlines vary. Many small businesses use a payroll service or an accountant.

What does withholding mean for an employer?

A. Holding back the employee's whole paycheck as a penalty
B. Taking taxes out of pay and sending them to the agency
C. Keeping the employee's tools
D. Refusing to pay overtime

REFERENCE LABEL: NOT PART OF THE QUESTION ID S121-M-Q1

Learn
Imagine a cashier who collects a small amount from each sale for a charity and must send it in every month. The money passes through the cashier but belongs to the charity. Withheld payroll taxes are similar: the employer holds them briefly and must send them on time. Spending them on rent is like spending the charity's money.

The charity money belongs to whom?

A. The store owner
B. The customer forever
C. The cashier
D. The charity

Learn
Hiring an EMPLOYEE brings PAYROLL duties. In general terms, an employer withholds certain taxes from the employee's pay, pays its own share of some payroll taxes, sends the money and reports to tax agencies on schedule, follows minimum wage and overtime rules, and gives the employee year-end tax forms. Many states also require registration and may require workers' compensation insurance. This course teaches the idea; rates, forms and deadlines vary. Many small businesses use a payroll service or an accountant.

An owner hires her first employee. Which step should come first?

A. Pay cash with no records
B. Learn the federal and state employer requirements
C. Wait until year end to think about taxes
D. Call the employee a contractor to skip payroll entirely

Set 122: Onboarding and offboarding helpers

Outcome ENT.HELP.04: Plan access, files and handover when a helper starts or leaves

Module: Foundation 15: Help, delegation and partners

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
ONBOARDING sets up a new helper to succeed and keeps the business safe: a written role description, any required paperwork, training with the checklists, their own logins with limited access, and who to ask for help. OFFBOARDING happens when someone leaves: remove their access the same day, collect keys and equipment, transfer any files or customer conversations they handled, settle final pay as required, and thank them. Both are easier with a simple checklist.

What is onboarding?

A. Setting up a new helper to succeed
B. Removing a helper's access
C. Loading boxes onto a delivery truck
D. Filing an annual report

Starting with a PARTNER can add skills, money and support, but disagreements are a common reason partnerships fail. Before starting, agree in writing on: each person's ROLE and time commitment, ownership percentages and money contributed, how decisions are made (and how ties are broken), how profits are shared, what happens if someone wants to leave or stops contributing, and how to resolve disagreements. Talk openly about goals, risk tolerance and money. Friendship is not a substitute for a written agreement.

Is friendship a substitute for a written agreement?

A. Only for family
B. No
C. Yes, always
D. Only for small businesses

Before a long road trip, friends decide who drives when, how gas money is split, and what happens if one wants to stop early. Without that talk, small annoyances grow into big fights by day three. A business partnership is a much longer trip with more money at stake, so the same planning matters even more.

Who drives when is like what?

A. The profit split
B. Exit rule
C. Each partner's role
D. Logo

Set 124: Mentors, accountants, attorneys and free help

Outcome ENT.HELP.06: Match a question to the right kind of advisor or free resource

Module: Foundation 15: Help, delegation and partners

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Help comes in different forms. MENTORS share experience and can spot blind spots. SCORE, an SBA resource partner, offers free volunteer mentoring (some workshops charge fees). SMALL BUSINESS DEVELOPMENT CENTERS (SBDCs) offer free or low-cost consulting through host institutions. Libraries and local chambers of commerce may run workshops. For specific legal or tax decisions, a licensed ATTORNEY or ACCOUNTANT gives advice for your situation. Free help is valuable, but check the person's experience and whether they are qualified for your question.

What does SCORE offer?

A. Free volunteer mentoring
B. Free business loans for every owner
C. Free tax filing for all businesses
D. Free legal representation in court

Outcome ENT.FUND.01: Compare paying for a business from savings and early sales with outside money

Module: Funding, growth and limits

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
BOOTSTRAPPING means starting and growing with your own money and the business's own sales, without loans or investors. It keeps you in control and avoids debt, but growth may be slower. If you use personal SAVINGS, decide in advance how much you can afford to lose without harming your household, such as rent, food and an emergency fund. Start with the smallest version that can test demand, and reinvest early profits rather than spending them.

What does bootstrapping mean?

A. Selling part of the business to investors on day one
B. Buying expensive boots for every employee in the shop
C. Growing with your own money and sales, without loans or investors
D. Borrowing as much as possible from several banks at once

Start with the smallest version that can test demand, and reinvest early profits rather than spending them.

What is a benefit of bootstrapping?

A. You never need to make a single sale to survive
B. You keep control and avoid debt
C. Growth is always faster than with any outside money
D. Your personal savings can never be at risk at all

Learn
Before risking savings, subtract what must stay safe. Safe amount = monthly household costs x number of months you want covered. Example: costs of 2,000 a month for 4 months = 8,000. If savings are 11,000, the amount you could risk is 11,000 - 8,000 = 3,000. If savings are less than the safe amount, there is nothing to risk yet.

Monthly costs 1,500 for 3 months. What is the safe amount?

A. 4,500 per month
B. 1,500
C. 500
D. 4,500

Learn
A LOAN gives money now that must be repaid with INTEREST (the cost of borrowing) over a set TERM. Compare loans by the total cost, not just the monthly payment: total repaid = monthly payment x number of payments. A longer term usually lowers the monthly payment but raises total interest. Lenders may require a PERSONAL GUARANTEE or COLLATERAL (property the lender can take if you do not repay). Borrow only for a plan that can realistically repay from cash flow.

What is interest?

A. A discount the lender gives for borrowing
B. The cost of borrowing money
C. A tax the state charges on all sales
D. The owner's personal hobby or passion

Lenders may require a PERSONAL GUARANTEE or COLLATERAL (property the lender can take if you do not repay). Borrow only for a plan that can realistically repay from cash flow.

An online lender offers "fast cash, small daily payments" with no clear total cost. What should the owner do?

A. Ask for the total repaid and the rate before deciding
B. Sign without reading
C. Assume small payments mean low cost
D. Accept quickly before the fast-cash offer ends

Learn
A LOAN gives money now that must be repaid with INTEREST (the cost of borrowing) over a set TERM. Compare loans by the total cost, not just the monthly payment: total repaid = monthly payment x number of payments. A longer term usually lowers the monthly payment but raises total interest. Lenders may require a PERSONAL GUARANTEE or COLLATERAL (property the lender can take if you do not repay). Borrow only for a plan that can realistically repay from cash flow.

Daily payments of 40 dollars for 150 business days on a 5,000-dollar advance. What is the total repaid?

A. 4,000 dollars
B. 190 dollars
C. 6,000 dollars
D. 5,000 dollars

Learn
A GRANT is money that does not have to be repaid, usually from a government agency, foundation or company, for specific purposes. Grants for starting a general small business are less common than many people think; many target research, specific industries, places or groups. Applications take time, have deadlines and rules about how money is spent, and may require reports. Be wary of offers that charge a fee to "guarantee" a grant. Free help finding real programs is available from SBDCs and similar organizations.

What is a grant?

A. Money for specific purposes that is not repaid
B. A loan with a very low interest rate from a bank
C. An investment that buys part of the business
D. A tax that small businesses must pay each year

Learn
INVESTORS give money in exchange for EQUITY: a share of ownership, and often a say in decisions. If an investor pays 20,000 dollars for 20 percent, the business is valued at 100,000 dollars and the founder now owns less of it (DILUTION). Investors expect a return, usually from growth. CROWDFUNDING raises money from many people online; reward crowdfunding gives backers a product or perk, and backers expect delivery. Equity crowdfunding sells ownership and has legal rules. Read terms carefully and get advice.

After that deal, what percent does a founder who owned 100 percent keep?

A. 100 percent
B. 25 percent
C. 75 percent
D. 50 percent

Set 129: Money raised is not profit

Outcome ENT.FUND.05: Separate money from loans or investors from revenue and profit

Module: Funding, growth and limits

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Money from a loan, investor, grant or crowdfunding campaign increases CASH, but it is not PROFIT. Loans must be repaid; investors own part of the business; crowdfunding backers are owed products. Profit comes only from selling for more than your costs. A business can raise a lot of money and still lose money on every sale. Track BURN RATE (how much cash the business uses each month) and RUNWAY (months until cash runs out = cash / monthly burn).

Is a 30,000-dollar loan profit?

A. Yes, all cash received is profit
B. Yes, if spent within a month
C. No, it must be repaid
D. Only if the bank is local

Learn
Imagine a lemonade stand earning 50 cents of profit per cup but paying a friend 1 dollar for every new customer he brings. If each customer buys only one cup, the stand loses 50 cents per customer, and the busier it gets, the more it loses. If customers come back for 3 cups, the stand earns 1.50 per customer and the deal works.

The 1 dollar paid per new customer is like what?

A. The lemon cost
B. The price per cup of lemonade
C. Customer acquisition cost
D. A tax

Learn
UNIT ECONOMICS looks at whether one sale (or one customer) makes money. For one order: price minus all costs that come with that order (product, packaging, shipping, payment fees, and any discount) gives the CONTRIBUTION per order. If you pay to get customers, compare CUSTOMER ACQUISITION COST (CAC: marketing spend / new customers) with how much contribution a customer brings over time. Growing a business with negative unit economics grows the losses.

A subscription box earns 9 dollars of contribution per month. Customers stay 6 months on average. What is contribution per customer?

A. 1.50 dollars

B. 54 dollars

C. 15 dollars

D. 9 dollars

Set 131: Getting customers, keeping customers, repeat sales

Outcome ENT.GROW.02: Compare the cost of getting a customer with what a returning customer brings

Module: Funding, growth and limits

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Getting a new customer usually costs more effort than keeping one. RETENTION is the share of customers who come back. REPEAT SALES come from good products, reliable service, easy reordering, and staying in touch with permission (an email list, a loyalty card, a reminder when a refill is due). A business that loses most customers after one purchase must keep finding new ones. Track how many customers buy again within a set period, such as 90 days.

What is retention?

A. A type of business loan
B. Holding back an employee's pay
C. The number of new ads placed each month
D. The share of customers who come back

REFERENCE LABEL: NOT PART OF THE QUESTION ID S131-M-Q1

Grow in small steps, such as one helper, one new product or one new location, and measure the result. Protect QUALITY: if growth causes late orders, mistakes or unhappy customers, slow down and fix the process. Growing too fast can break what made the business work.

What should happen if growth causes many late orders?

A. Grow even faster to catch up
B. Slow down and fix the process
C. Lower quality further
D. Ignore the complaints

Set 133: Burnout and a sustainable pace

Outcome ENT.GROW.04: Plan workload and limits that a person can keep up

Module: Funding, growth and limits

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Owners often work long hours without breaks, which can lead to BURNOUT: exhaustion, mistakes and loss of motivation. A burned-out owner is a risk to the business. A SUSTAINABLE PACE means planning work hours the owner can keep up, protecting sleep and days off, saying no to work that does not fit, raising prices when demand exceeds capacity, and getting help. Watch warning signs such as constant tiredness, more mistakes, and dreading work, and act early.

What is burnout?

A. A marketing strategy for fast growth
B. A kitchen fire in the shop
C. A tax penalty for late filing
D. Exhaustion and mistakes from overwork

Sometimes the right decision is to CLOSE or pause a business. Winding down honestly means: finish or refund customer orders and prepaid services; tell customers and suppliers clearly; pay what you owe as far as possible; cancel subscriptions and licenses; file final tax returns and any state DISSOLUTION papers for an LLC or corporation; and keep records for the required period. Closing well protects your reputation and your future options.

What should happen to prepaid orders when closing?

A. Ship empty boxes to close the orders
B. Keep the money and say nothing to anyone
C. Ask customers to forget the orders
D. Fulfill them or refund the customers

Learn
When you move out, you give notice, pay the last rent, return the keys, clean up, and forward your mail. If you just disappear, the landlord is stuck, you may lose your deposit, and it is harder to rent next time. Closing a business is similar: notice, payments, paperwork and records, so you leave on good terms.

Giving notice is like what in a business?

A. Raising prices
B. Telling customers and suppliers
C. Opening a new store
D. Hiding the closure from everyone

Set 135: Founder case: Wrigley follows what customers wanted

Outcome ENT.CASE.09: Apply a documented change of offer (switching to the item customers preferred) to a new business

Module: Funding, growth and limits

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Documented history (Britannica): William Wrigley Jr. moved to Chicago in 1891 selling soap and offered baking powder as a premium (a free extra). Baking powder proved more popular, so he switched to selling it and offered chewing gum as a premium. The gum proved more popular, and he turned to selling chewing gum. (Exact years of each switch differ between sources.) Lesson drawn by this course (an interpretation): watch what customers actually prefer and be willing to change your main product. One success story does not guarantee the same result for another business.

According to the passage, what did Wrigley first sell in Chicago?

A. Candy bars and chocolate
B. Soap
C. Chewing gum from the very start
D. Newspapers and magazines

REFERENCE LABEL: NOT PART OF THE QUESTION ID S135-M-Q1

Learn
Documented history (Britannica): William Wrigley Jr. moved to Chicago in 1891 selling soap and offered baking powder as a premium (a free extra). Baking powder proved more popular, so he switched to selling it and offered chewing gum as a premium. The gum proved more popular, and he turned to selling chewing gum. (Exact years of each switch differ between sources.) Lesson drawn by this course (an interpretation): watch what customers actually prefer and be willing to change your main product. One success story does not guarantee the same result for another business.

Free extras cost 0.50 dollars each across 400 sales. What do the extras cost in total?

A. 400 dollars
B. 800 dollars
C. 0.50 dollars
D. 200 dollars

Set 136: Estimating a service job

Outcome ENT.SVC.01: Estimate a job from stated hours, rate, materials and travel

Module: Path: services, freelancing & local businesses

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
To estimate a service job, list every part of the work and estimate time for each, including setup, travel, cleanup and communication. Multiply total hours by your hourly rate, add materials, and add a small CONTINGENCY for surprises (for example 10 percent). Example: 6 hours at 45 dollars = 270, plus 60 dollars of materials = 330, plus 10 percent = 363 dollars. Afterward, compare actual time with the estimate and adjust future estimates.

Which time should be included in an estimate?

A. Only the minutes spent doing the main task itself
B. Only travel, since the work is the easy part
C. Only the time the customer can see you working
D. All of it: setup, travel, cleanup, messages and the work

REFERENCE LABEL: NOT PART OF THE QUESTION ID S136-M-Q1

What is contingency in an estimate?

A. A separate fee charged for travel only
B. The materials cost
C. The customer's tip
D. A small extra amount for surprises

REFERENCE LABEL: NOT PART OF THE QUESTION ID S136-M-Q5
Entrepreneurship, Set 136: Estimating a service job · MAIN · Q5/5 · Outcome ENT.SVC.01 (local)

Learn
An estimate combines multiplication and addition: (hours x rate) + materials, then add the contingency percent. Example: 3 hours at 50 = 150; + 30 materials = 180; x 1.10 = 198. Do the steps in order. A common mistake is applying the percent before adding materials, which leaves the materials uncovered by the buffer. Checking each step on paper avoids that slip.

4 hours at 35 dollars. What is the labor cost?

A. 140
B. 8.75
C. 35
D. 39

Learn
A service business sells time, so CAPACITY depends on how many appointments fit in a day. Count appointment length, TRAVEL between appointments, and a small BUFFER for delays. Example: a 9-hour day with 1.5-hour appointments plus 30 minutes of travel each fits 9 / 2 = 4.5, so 4 appointments. Grouping clients by area (ROUTING) reduces travel and increases capacity. Track no-shows and late cancellations, which waste capacity.

Two no-shows a week at 70 dollars each cost how much over 4 weeks?

A. 140 dollars
B. 280 dollars
C. 560 dollars
D. 70 dollars

Set 138: Service scope and deposits

Outcome ENT.SVC.03: Write service scope and deposit terms that prevent disputes

Module: Path: services, freelancing & local businesses

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Service jobs go wrong when SCOPE is vague. Before starting, write what is included (for example "deep clean of kitchen and 2 bathrooms"), what is not ("windows and inside the oven are extra"), how many visits or revisions are included, and what happens with extras. Take a DEPOSIT for bookings or custom work, especially if you buy materials or reserve a date; state whether it is refundable. Confirm changes in writing before doing extra work.

Which scope statement is clearest?

A. "Cleaning, more or less"
B. "Clean the house nicely"
C. "Do whatever needs doing around the whole house"
D. "Deep clean of kitchen and 2 bathrooms; windows extra"

REFERENCE LABEL: NOT PART OF THE QUESTION ID S138-M-Q1

Many service businesses grow through REPEAT CLIENTS: weekly cleaning, monthly lawn care, regular tutoring. Recurring clients make income more predictable and reduce marketing effort. Offer a simple recurring schedule, book the next visit before leaving, send reminders, and keep notes on each client's preferences. Plan capacity so regulars get reliable slots, and decide how far ahead to book and how to handle holidays.

A tutor books the next session before each lesson ends. What is the main benefit?

A. Fewer gaps and more predictable income
B. Clients never cancel
C. Lessons become free
D. No need for any reminders ever again

Set 140: Founder case: Airbnb starts with its founders' own apartment

Outcome ENT.CASE.10: Apply a documented early test (serving a few real guests during a known demand spike) to a new service

Module: Path: services, freelancing & local businesses

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Documented history (Wharton/Knowledge at Wharton): In 2007 Brian Chesky and Joe Gebbia rented air mattresses in their San Francisco apartment to people attending a design conference when hotels were booked. The idea was first called AirBed & Breakfast, and Nathan Blecharczyk joined as a cofounder to build the website. Lesson drawn by this course (an interpretation): test a service idea first with resources you already have, during a moment of clear demand, before investing heavily. One success story does not guarantee the same result for another business.

According to the passage, what did the founders first rent out?

A. Air mattresses in their own apartment
B. Office space downtown
C. Cars to conference visitors
D. A chain of hotels they had bought

Outcome ENT.PROD.01: Compare suppliers by samples, terms and reliability, not price alone

Module: Path: physical products & e-commerce

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A product business depends on SUPPLIERS. Before a big order, request SAMPLES to check quality, compare at least two or three suppliers, and ask about minimum order quantity, price breaks, lead time, defect policy and payment terms. Start with a small order to test RELIABILITY: did it arrive on time, as described, with few defects? Keep a backup supplier for key items. The cheapest supplier is not always the best value if quality or delivery is poor.

Why request samples before a big order?

A. To avoid paying for anything
B. To check quality before committing
C. To get free products forever
D. Because samples replace contracts

REFERENCE LABEL: NOT PART OF THE QUESTION ID S141-M-Q1
Entrepreneurship, Set 141: Suppliers, samples and reliability · MAIN · Q1/5 · Outcome ENT.PROD.01 (local)

If some items arrive defective, the real cost of each usable item is higher. Cost per good item = price per item / share that is good. Example: 5 dollars each with 20 percent defective means 80 percent good: 5 / 0.80 = 6.25 dollars per good item. Compare suppliers using this number, not just the listed price. The lowest sticker price can hide the highest real cost.

5 dollars each, 80 percent good. What is the cost per good item?

A. 6.25 dollars
B. 5.00 dollars
C. 4.00 dollars
D. 5.80 dollars

Learn
A product business depends on SUPPLIERS. Before a big order, request SAMPLES to check quality, compare at least two or three suppliers, and ask about minimum order quantity, price breaks, lead time, defect policy and payment terms. Start with a small order to test RELIABILITY: did it arrive on time, as described, with few defects? Keep a backup supplier for key items. The cheapest supplier is not always the best value if quality or delivery is poor.

A candle maker gets samples from three jar suppliers. One sample cracked in shipping. What should she do?

A. Ignore the crack
B. Order 5,000 jars immediately to get the lowest price
C. Ask about packaging and test a small order first
D. Choose based only on price

Set 142: Packaging and damage

Outcome ENT.PROD.02: Choose packaging that protects items, and price in damage

Module: Path: physical products & e-commerce

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
PACKAGING protects products in shipping and shapes the customer's first impression. Match packaging to the item: fragile items need cushioning and a sturdy box; flat items need stiff mailers. Test by packing a few items and shipping them to yourself or a friend. Include packaging cost (box, filler, tape, labels) in cost per item. Track DAMAGE RATE: damaged orders / total orders. A small increase in packaging cost can be worth it if it cuts expensive replacements.

What does packaging do besides protect the item?

A. Removes shipping costs
B. Shapes the customer's first impression
C. Replaces the product description
D. Lowers all taxes owed

FULFILLMENT is everything from order to delivery: picking the item, packing, labeling, shipping and confirming. Set a clear processing time (for example "ships in 2 business days") and meet it. RETURNS need a clear process: how customers request a return, the time limit, the condition required, who pays return shipping, and how quickly refunds are issued. Inspect returned items, restock what is sellable, and track return reasons to fix causes.

"Ships in 2 business days" is what kind of promise?

A. A delivery guarantee from the carrier
B. A refund policy
C. A discount
D. A processing time

A library has a clear checkout process and a clear return process: due dates, condition expectations, and what happens to books that come back damaged. Returned books are checked and put back on shelves. A product business needs the same two desks: one for getting orders out correctly and one for handling what comes back.

The checkout desk is like what?

A. Taxes
B. The return desk
C. Fulfillment
D. Marketing

Set 144: Choosing selling channels

Outcome ENT.PROD.04: Compare selling channels by fees, control and customers reached

Module: Path: physical products & e-commerce

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
A product can be sold through different CHANNELS: your own website, an online marketplace, local markets and fairs, wholesale to shops, or consignment. Each has different fees, reach and control. A marketplace may bring buyers but charges fees and sets rules; your own site gives control but you must bring the visitors; WHOLESALE sells in bulk at a lower price (often around half of retail) to stores that resell. Compare contribution per sale after channel costs.

What is wholesale?

A. Selling only at farmers markets
B. Selling one item at full price online to a shopper
C. Selling in bulk at a lower price to stores that resell
D. Giving items away for free

REFERENCE LABEL: NOT PART OF THE QUESTION ID S144-M-Q1

Set 145: Shipping costs and return addresses

Outcome ENT.PROD.05: Include shipping costs and a reliable return address in an online product plan

Module: Path: physical products & e-commerce

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Shipping cost depends on weight, package size (carriers may charge by DIMENSIONAL WEIGHT for large, light boxes), distance and speed. Weigh and measure packed items, compare carriers and services, and decide how to charge: customer pays actual shipping, a flat rate, free shipping built into prices, or free over a minimum order. Use a reliable RETURN ADDRESS on labels; a PO Box can work as a return address, while some carriers that need a street address may use a PO Box Street Addressing option where available.

What can make a large, light box cost more to ship?

A. Having a logo on the box
B. Dimensional weight pricing
C. Shipping on a Monday
D. Using a darker color tape

Entrepreneurship, Set 145: Shipping costs and return addresses · MAIN · Q1/5 · Outcome ENT.PROD.05 (local)

Learn
Shipping cost depends on weight, package size (carriers may charge by DIMENSIONAL WEIGHT for large, light boxes), distance and speed. Weigh and measure packed items, compare carriers and services, and decide how to charge: customer pays actual shipping, a flat rate, free shipping built into prices, or free over a minimum order. Use a reliable RETURN ADDRESS on labels; a PO Box can work as a return address, while some carriers that need a street address may use a PO Box Street Addressing option where available.

What is "free shipping built into prices"?

A. Raising product prices to cover shipping
B. The carrier ships for free
C. Shipping is removed from the business's costs
D. Customers pay twice

Entrepreneurship, Set 145: Shipping costs and return addresses · MAIN · Q5/5 · Outcome ENT.PROD.05 (local)

Learn
A pillow is light but big; a book is small but heavy. Carriers care about both, so a big pillow box can cost more than you expect. Choosing the smallest box that protects the item can lower cost. And the return address is like the "return to sender" note: it should go somewhere you reliably check.

Why can the pillow box cost a lot?

A. Pillows are heavy
B. It is big even though it is light
C. It has no address
D. Pillows are illegal to mail in boxes

Set 146: Support and updates for digital products

Outcome ENT.DIG.01: Plan support and updates a digital product needs

Module: Path: digital products & software

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Digital products (apps, templates, online courses, software tools) are not "make once and forget." Customers need SUPPORT: answers when something does not work, clear instructions, and a way to contact you. Products also need UPDATES when devices, browsers or platforms change, and to fix bugs (errors). Budget time for support and updates, state what support is included (for example "email replies within 2 business days"), and keep a list of common questions to turn into a help page.

Why is a digital product not "make once and forget"?

A. Customers never have questions about software
B. Customers need support and the product needs updates
C. Digital products never have errors once launched
D. Devices and platforms never change over time

REFERENCE LABEL: NOT PART OF THE QUESTION ID S146-M-Q1
Entrepreneurship, Set 146: Support and updates for digital products · MAIN · Q1/5 · Outcome ENT.DIG.01 (local)

D. Hiding updates

REFERENCE LABEL: NOT PART OF THE QUESTION ID S146-F2-Q4
Entrepreneurship, Set 146: Support and updates for digital products · FORWARD 2: HANDLE THE COMPLICATIONS · Q4/5 · Outcome ENT.DIG.01 (local)

Learn
Digital products (apps, templates, online courses, software tools) are not "make once and forget." Customers need SUPPORT: answers when something does not work, clear instructions, and a way to contact you. Products also need UPDATES when devices, browsers or platforms change, and to fix bugs (errors). Budget time for support and updates, state what support is included (for example "email replies within 2 business days"), and keep a list of common questions to turn into a help page.

Which statement is accurate?

A. Digital products never need maintenance.
B. Support is optional for paid digital products.
C. Updates never cause new problems.
D. Digital products need ongoing support and updates.

Set 147: Access, accounts and licensing

Outcome ENT.DIG.02: Decide what buyers may do with a digital product and how they get access

Module: Path: digital products & software

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Digital products are usually sold as a LICENSE: permission to use them under stated terms, not ownership of the product itself. A license states who may use it (one person, a team, a business), how many devices or projects, whether it may be resold or shared, and how long it lasts. Customer ACCESS is often managed by accounts or download links. Write the license in plain words, show it before purchase, and decide what happens to access if a customer cancels or requests a refund.

What does a customer usually buy with a digital product?

A. The company that made it
B. A license to use it under stated terms
C. Full ownership of the product and its code
D. The right to resell unlimited copies

Small tools were added one by one and now total 300 dollars a month. What is a good habit?

A. Never look at tool costs
B. Review the tool list every few months
C. Add more tools to compensate
D. Pay with a personal card to hide it

REFERENCE LABEL: NOT PART OF THE QUESTION ID S148-F2-Q1
Entrepreneurship, Set 148: Recurring costs of digital businesses · FORWARD 2: HANDLE THE COMPLICATIONS · Q1/5 · Outcome ENT.DIG.03 (local)

Learn
Digital businesses can look cheap to run but have RECURRING COSTS: hosting, domain, email service, software subscriptions, payment and platform fees, storage, design tools and app store fees. Many costs grow with users, such as storage or email sending limits. List every recurring cost, convert to a monthly total, and compare with monthly revenue. A product with low marginal cost (the cost of one more sale) can still lose money if fixed monthly costs are high.

A platform raises its fee from 5 to 8 percent on 2,000 dollars of monthly sales. How much more per month?

A. 160 dollars

B. 100 dollars

C. 60 dollars

D. 3 dollars

Set 149: Onboarding and checking usefulness

Outcome ENT.DIG.04: Help new users succeed and measure whether they keep using it

Module: Path: digital products & software

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
ONBOARDING is a new customer's first experience: signing up, the first steps, and reaching a first useful result. If that path is confusing, many customers quit early. Make the first steps short and clear, show an example, and send a helpful message after sign-up. Then CHECK USEFULNESS: are people actually using the product after a week or a month? Track activation (the share who reach a first useful result) and ask a few customers what helped or confused them.

What is activation?

A. The number of ads shown
B. The moment a user's computer is switched on
C. The price of a subscription
D. The share of new users who reach a first result

Set 150: Founder case: Microsoft's first product for one platform

Outcome ENT.CASE.11: Apply a documented early decision (building software for a specific new machine and licensing it) to a new digital business

Module: Path: digital products & software

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Documented history (Centre for Computing History): Bill Gates and Paul Allen wrote a BASIC interpreter (a program that lets people write and run simple code) for the MITS Altair 8800 computer in 1975, demonstrated it to MITS, and licensed it to MITS as Altair BASIC; this was Microsoft's first product. Lesson drawn by this course (an interpretation): build for one specific platform with real users, show that it works, and license software rather than selling ownership. One success story does not guarantee the same result for another business.

According to the passage, what was Microsoft's first product?

A. A video game console
B. Altair BASIC
C. A word processor for offices
D. An internet search engine

Documented history (Centre for Computing History): Bill Gates and Paul Allen wrote a BASIC interpreter (a program that lets people write and run simple code) for the MITS Altair 8800 computer in 1975, demonstrated it to MITS, and licensed it to MITS as Altair BASIC; this was Microsoft's first product. Lesson drawn by this course (an interpretation): build for one specific platform with real users, show that it works, and license software rather than selling ownership. One success story does not guarantee the same result for another business.

She licenses the plugin at 15 dollars per site. 120 sites buy it. What is revenue?

A. 135 dollars

B. 120 dollars

C. 8 dollars

D. 1,800 dollars

REFERENCE LABEL: NOT PART OF THE QUESTION ID S150-F1-Q2

A company offers 2,000 dollars to own the plugin outright. Licensing has earned 1,800 in a year and is growing. What should she weigh?

A. Nothing, because selling outright is always better

B. Ongoing license income versus a one-time sale

C. Only the bigger number today

D. Only the buyer's logo

REFERENCE LABEL: NOT PART OF THE QUESTION ID S150-F1-Q3

Content creators build on ORIGINAL work: your own writing, photos, video, music and ideas. Using someone else's clips, songs, images or text usually needs permission or a license, even if you give credit. Some platforms have tools that detect copyrighted material and may block, mute or remove content. Keep records of licenses and permissions. If you film people, especially in private settings, get their permission to publish. Original work protects your channel and builds a distinct voice.

Does giving credit replace getting permission?

A. Yes, credit always makes any use legal

B. Yes, but only for music

C. Yes, for short clips only

D. No, permission or a license is still needed

REFERENCE LABEL: NOT PART OF THE QUESTION ID S151-M-Q1

Learn
If a friend raves about a restaurant and later you learn she owns part of it, you might feel misled, even if the food is good. If she says up front, "I own part of this place, but I think you'll love it," you can decide for yourself. Sponsorship disclosure is that up-front sentence, said before the recommendation.

Does disclosure mean the food is bad?

A. Only for pizza
B. Yes, always
C. Only on weekends
D. No

Creators may earn through SPONSORSHIPS (a brand pays for a mention or video) and AFFILIATE LINKS (a commission on sales). Both are material connections that should be disclosed clearly where viewers will notice, such as saying "This video is sponsored by..." at the start and labeling links. A platform's built-in disclosure tool is not automatically enough. Choose sponsors that fit your audience, agree in writing on deliverables, payment and deadlines, and never make claims about a product you cannot support.

A brand offers 800 dollars for one video mention. The creator's audience is gardeners; the brand sells car parts. What should she weigh?

A. Nothing, because money is money
B. Only the payment amount
C. Only the brand's logo
D. Whether the sponsor fits her audience

Set 153: Being seen versus being eligible to earn

Outcome ENT.CONT.03: Tell platform visibility from monetization eligibility and check the official rules

Module: Path: content creation & social media

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Posting content and getting views is not the same as being ELIGIBLE TO EARN from a platform. For example, earning ad revenue on YouTube requires joining the YouTube Partner Program, which has eligibility thresholds and policies separate from simply posting videos; the thresholds have changed over time, so check the official help page rather than old articles. Platforms can also change programs. Creators often earn through several routes at once: platform programs, sponsorships, affiliate links, their own products, and services.

Does getting views automatically mean earning ad revenue?

A. Yes, after the first video
B. No; platform programs have eligibility rules
C. Yes, every view always pays the creator
D. Yes, if the video has music

A creator's main asset is AUDIENCE TRUST: viewers believe the creator is honest and useful. Trust is built by consistent, accurate content, disclosed sponsorships, admitting mistakes, and respecting the audience's time. It is easily lost through hidden ads, misleading claims or low-quality promotions. DIVERSIFICATION means not depending on one platform or income source: an email list, a website, and more than one channel or product reduce the risk of losing everything to one change.

What can quickly lose trust?

A. Respecting viewers' time
B. Consistent, accurate content
C. Hidden ads
D. Disclosed sponsorships

Entrepreneurship, Set 154: Audience trust and diversification · MAIN · Q5/5 · Outcome ENT.CONT.04 (local)

Learn
People trust a local newspaper because it reports accurately, labels ads as ads, and prints corrections. If it hid paid articles as news, readers would stop trusting it. And a newspaper that also has a website and a newsletter is not ruined if one delivery route fails. Creators work the same way: honesty builds trust, and more than one channel spreads risk.

Labeling ads as ads is like what for a creator?

A. Buying views
B. Deleting comments
C. Hiding paid sponsorships
D. Disclosing sponsorships

Set 155: Creator costs and uneven income

Outcome ENT.CONT.05: Plan for creator costs and income that changes month to month

Module: Path: content creation & social media

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Creating content has COSTS: equipment, software subscriptions, music licenses, editing help, travel and the creator's own time. Creator INCOME is often UNEVEN: sponsorships arrive irregularly, ad revenue can swing by season or with platform changes, and product launches come in bursts. Plan with a monthly budget based on a cautious estimate, keep a cash reserve for slow months, set aside money for taxes, and track income by source so you can see trends.

Which is a creator cost?

A. Viewers' comments
B. Music licenses and editing software
C. The platform's logo
D. Followers' birthdays and names

Set 156: Founder case: Craigslist grows from an email list

Outcome ENT.CASE.12: Apply a documented early pattern (a free list that grew because users asked for more) to a new content or community business

Module: Path: content creation & social media

Course scope: general education for US learners, not legal, tax or financial advice. Rules, fees and platform policies change and vary by state and city; each lesson says what to check and where. All businesses and people in the questions are fictional unless a lesson names a real company.

Learn
Documented history (Encyclopedia.com): Craig Newmark began emailing San Francisco event notices to friends in 1995. People asked to join, and they started posting other things such as jobs and apartments. The list moved to the web and was incorporated as a company in 1999. Lesson drawn by this course (an interpretation): start by sharing something useful with people who asked for it, listen to what they start using it for, and grow the format around their needs. One success story does not guarantee the same result for another business.

According to the passage, how did it start?

A. A paid newspaper with printed classified ads
B. A television show about San Francisco local events
C. An email list of local event notices for friends
D. A mobile app for dating

Learn
Documented history (Encyclopedia.com): Craig Newmark began emailing San Francisco event notices to friends in 1995. People asked to join, and they started posting other things such as jobs and apartments. The list moved to the web and was incorporated as a company in 1999. Lesson drawn by this course (an interpretation): start by sharing something useful with people who asked for it, listen to what they start using it for, and grow the format around their needs. One success story does not guarantee the same result for another business.

What did people start posting besides events?

A. Nothing else
B. Jobs and apartments
C. Only cat photos
D. Only family recipes

Learn
Imagine pinning a sheet of local events on a café bulletin board. Soon neighbors add notes about lost pets, rooms for rent and jobs. You notice and add sections for each. You did not plan those sections; you followed what people used the board for. The documented Craigslist facts are the email list, the new kinds of posts and the dates; the bulletin board comparison is this course's explanation.

The first sheet of local events is like what?

A. A paid daily newspaper in print
B. The original email list of events
C. A tax form
D. A store sign
