CORRECT ANSWER

Both start at 0 and take the same number of steps, and A adds 6, which is 3×2 , at every step, so A has always added 3 times as much.

GRADING NOTE Must connect the rule amounts ($6 = 3 \times 2$) to the same start of 0 and the same number of steps.

GRADING NOTE REQUIRED WORK: Any valid area model or chain of equations that shows how the product is found. Examples: place-value parts $9 \times 2,000 = 18,000$, $9 \times 100 = 900$, $9 \times 40 = 360$ and $9 \times 6 = 54$, then $18,000 + 900 + 360 + 54 = 19,314$; or $(10 - 1) \times 2,146 = 21,460 - 2,146 = 19,314$. Answer with required work

CORRECT ANSWER

224

GRADING NOTE REQUIRED WORK: Any valid area model or chain of equations that shows how the quotient is found. Examples: split 1,792 into parts that 8 divides, $8 \times 200 = 1,600$ and $8 \times 24 = 192$, with $1,600 + 192 = 1,792$, so the quotient is 224; or divide by 2 three times, $1,792 \div 2 = 896$, $896 \div 2 = 448$, $448 \div 2 = 224$. The answer without a valid model or equations earns partial credit.

Each third is split into 4 equal parts, so each new part is $\frac{1}{4}$ the size of a third. There are 4 times as many parts (12) and 4 times as many shaded parts (8), and the whole and the shaded amount stay the same.

GRADING NOTE Must connect both the number and the size of the parts: the number of parts and the number of shaded parts are both multiplied by 4, each new part is $\frac{1}{4}$ the size of an original third, and the whole and the shaded amount stay the same. Written: $2\frac{1}{2}$ meters

GRADING NOTE Grade both: the number line shows the removed $\frac{1}{2}$ meter (a jump from 3 to $2\frac{1}{2}$, or the interval from $2\frac{1}{2}$ to 3 marked as cut off), and the answer $2\frac{1}{2}$ meters. A bar from 0 to $2\frac{1}{2}$ alone does not show the cut.
